CIVIL DOCKET NO. 15454, UNITED STATES DISTRICT COURT FOR THE EASTERN DISTRICT OF LOUISIANA, NEW ORLEANS DIVISION C—THREE JUDGE CASE—WISDOM, HUNTER, WEST.

ABERDEEN AND ROCKFISH RAILROAD COMPANY; * * *,

Plaintiffs,

v.

THE UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION.

Date

3/31/65 Flg. complaint. Exhibit annexed.

3/31/65 Flg. Application for Interlocutory Injunction and, if needed, Temporary Restraining Order. Exhibits annexed.

4/1/65 Flg. motion of The Southern Governors' Conference and The Southeastern Association of Railroad and Utilities Commissioners for leave to Intervene as Pltfs. in support of the action to set aside in part an Order of the Interstate Commerce Commission; notice of hearing and memo annexed.

4/5/65 Flg. motion and ORDER, dated 4/6/65, PERMITTING the following parties to intervene as Defendants in this matter: Baltimore & Ohio R. R. Co.; * * *; FURTHER ORDER permitting said intervening Defts. to file intervening answer to the Motion of Pltf. for Interlocutory Injunction; and further permitting above intervening Defts. to file, if needed, a Temporary Restraining Order. Ent. 4/8/65.

4/6/65 Flg. ANSWER by the above listed intervening Defts. to the complaint.

4/6/65 Flg. Answer of the above listed intervening Defts. to the application of Pltfs. for interlocutory injunction and, if needed, temporary restraining order; photostats annexed.

4/6/65 ORDER FIXING a hearing at the Federal Courthouse at Baton Rouge, La., on 4/12/65 to consider the question of whether or not a temporary restraining order should be issued in this matter; Counsel for all parties are ordered to attend. Ent. 4/8/65.

4/8/65 ORDER from Judge Tuttle APPOINTING Judges: John Minor Wisdom, Edwin F. Hunter of the Western District of La., and E. Gordon West to constitute a Three Judge Court in this matter. Ent. 4/9/65.

4/12/65 Flg. Answer of Intervening Defendants, Baltimore & Ohio R. R. Co., et als., to the Intervening complaint of Southern Governors' Conference, et al.

4/12/65 Flg. ORDER, granting Temporary Restraining Order on condition that a bond be filed by Pltfs. in the sum of $50,000.00 as security. Ent. 4/13/65.

4/26/65 ORDER FIXING THREE JUDGE HEARING on Pltfs. application for the issuance of a preliminary injunction on 5/27/65. Ent. 4/27/65. Dated 4/23/65.

5/27/65 Hearing and ORDER that the Court that a preliminary injunction should not issue, but that a protective Order should issue in lieu of; FURTHER ORDER that the temporary restraining Order be, EXTENDED for five days to allow parties to agree on the protective order. Should the parties fail to reach an agreement, then the Court will issue its own order. Ent. 5/28/65.

6/1/65 Flg. JOINT ANSWER by The United States of America and The Interstate Commerce Commission.

6/1/65 Flg. consent to the conditions made part of the order denying application of Pltfs. and intervening Pltfs. for an interlocutory injunction and dissolving temporary restraining order by Intervening Defts.

6/3/65 ORDER denying application of Pltfs. and intervening Pltfs. for an interlocutory injunction and dissolving the temporary restraining order. Ent. 6/4/65.

7/29/65 Flg. supplemental complaint by Pltfs. and ORDER permitting filing of same. Ent. 7/30/65.

8/18/65 Flg. Answer of the intervening Defts. to supplemental complaint.

8/23/65 Flg. JOINT ANSWER by Defts. The U. S. of America and The Interstate Commerce Commission to the supplemental complaint.

8/23/65 Flg. supplemental intervening complaint of The Sou. Governors' conference and The Southeastern Association of RR and Utilities Commissioners.

8/26/65 Flg. Reporter's transcript of hearing on 5/27/65.

9/14/65 Flg. Answer of intervening Defts. to supplemental intervening complaint.

10/7/65 Flg. Joint Answer of The U. S. of America and The Interstate Commerce Commission to the supplemental Intervening Complaint of the Sou. Governors' Conference et al.

1/25/66 Flg. ORDER the [that] the pre-trial procedure be observed in the matter of Aberdeen and Rockfish Railroad Co., and that all parties of record shall confer no later than 3/1/66, etc. Ent. 1/25/66.

2/11/66 Flg. joint motion of the U. S. of America, the Interstate Commerce Commission and ORDER, dated 2/14/66, that the date fixed as the latest date that counsel for all parties shall meet shall be changed to 3/15/66, and that the latest date within which the proposed pretrial order shall be submitted to the Court shall be changed to 3/29/66, and that the remainder of the order of 1/25/66 shall remain in full force and effect. Ent. 2/16/66.

3/29/66 Flg. Pre-Trial ORDER by the Court. (Dated 4/15/66). Ent. 4/18/66.

9/13/66 Flg. motion of Pltfs. to amend pre-trial Order and ORDER approving pre-trial Order. (Judge Wisdom.) Ent. 9/15/66.

10/15/66 Flg. joint appendix of record (Volume 1).

10/15/66 Flg. joint appendix of record (Volume 2).

10/14/66 Flg. Findings of fact and conclusion of law proposed by Pltfs.

10/14/66 Flg. Findings of Fact and Conclusions of Law proposed by Defts. and Intervening Defts.

11/30/66 ORDER that this case be, SET for hearing before the three Judge Court designated in this matter on 12/12/66, Etc. Ent. 11/30/66.

12/12/66 Hearing, Argument, Nat. B. Knight, Jr. orally moved to introduce the Honorable Carl B. Sanders, Gov. of Ga., requesting that he be allowed to argue this matter on behalf of intervening pltfs., same GRANTED. Argument, Rebuttal. All parties given 30 days w/in which to file briefs. SUBMITTED. Ent. 12/28/66.

1/23/67 Flg. Reporter's transcript of hearing on 12/12/66.

6/30/67 Flg. OPINION by the Court Judges Wisdom, Hunter and West. Ent. 7/5/67.

8/22/67 Flg. FINAL DECREE and ORDER, dated 8/8/67, that orders of 2/3/65 and 5/18/65 be, set aside and that said cause be remanded to the Commission for further proceedings consistent with the Opinion, Findings of Fact and Conclusions of Law of this Court (Judges Wisdom, Hunter and West). Ent. 8/22/67.

8/22/67 Flg. ORDER STAYING DECREE for the period of 60 days, Etc. Ent. 8/22/67.

9/15/67 Flg. Stipulation covering record on appeal by all parties.

10/2/67 Flg. motion of The Baltimore and Ohio RR Co. and ORDER, dated 10/4/67, that the Clerk of Court be directed to include in the certified record on appeal to the Supreme Court the briefs of the parties, joint appendix and the reporter's transcript, Etc. Ent. 10/12/67.

10/23/67 Flg. notice of appeal by U. S. A. and Interstate Commerce Comm.

10/2/67 Flg. notice of appeal to [by] The Baltimore and Ohio RR Co. et al. etc.

Plaintiffs,

v.

THE UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION,

Defendants.

Complaint to Set Aside in Part an Order of the Interstate Commerce Commission—Filed March 31, 1965.

Plaintiffs above named, by their attorneys, for statement of their claim against defendants, respectfully allege:

I.

This is a proceeding to set aside in part the order entered by the Interstate Commerce Commission (hereinafter referred to as the Commission) in an administrative proceeding identified as I. C. C. Docket No. 29799, *Akron, Canton & Youngstown Railroad Co., et al. v. Aberdeen and Rockfish Railroad Co. et al.*, and I. C. C. Docket No. 29885, *In the Matter of Divisions of Joint Rates Between Official and Southern Territories.*

II.

Plaintiffs are common carriers engaged in the transportation of property and persons for hire and are subject to the Interstate Commerce Act (49 U. S. C. § 1, *et seq.*) in respect of their interstate operations. Plaintiff Aberdeen and Rockfish Railroad Company is a corporation organized under the laws of the State of North Carolina, having its principal office at Aberdeen, North Carolina, and operating lines of railroad in North Carolina. * * * Plaintiff Louisiana

Southern Railway Company is a corporation organized under the laws of the State of Louisiana, having its principal office at New Orleans, Louisiana, and operating lines of railroad in the Eastern District of Louisiana. * * * Plaintiff New Orleans and Northeastern Railroad Company is a corporation organized under the laws of the State of Louisiana, having its principal office at New Orleans, Louisiana, and operating lines of railroad in two states, including lines in the Eastern District of Louisiana. Plaintiff New Orleans Terminal Company is a corporation organized under the laws of the State of Louisiana, having its principal office at New Orleans, Louisiana, and operating lines of railroad in the Eastern District of Louisiana. * * *

III.

The United States of America is made defendant in this proceeding pursuant to Title 28, United States Code, Section 2322. Defendant Interstate Commerce Commission is an agency of the United States created pursuant to the Interstate Commerce Act (49 U.S. C. § 1, *et seq.*)

IV.

The jurisdiction of this Court is invoked under Title 28, United States Code, Sections 1336, 2284 and 2321 through 2325, inclusive, and Title 5, United States Code, Section 1009. The matter in controversy exceeds, exclusive of interest and costs, the sum of $10,000.

V.

The venue of this proceeding is in this Court pursuant to Title 28, United States Code, Section 1398.

VI.

This proceeding arises from a dispute as to the lawful and proper division of revenues derived from freight traffic moving by rail between Official and Southern territories. Official territory (hereinafter also referred to as the North) is generally east of the Mississippi River and north of the

Ohio River. Southern territory (hereinafter also referred to as the South) is generally east of the Mississippi River and south of the Ohio River. The movements of freight traffic at issue in this case require the participation of both Northern railroads and Southern railroads.

VII.

Pursuant to the mandate of Section 1(4) of the Interstate Commerce Act (49 U.S.C. § 1(4)), Northern and Southern railroads have jointly established many "reasonable rates, fares, charges, and classifications applicable thereto . . ." with respect to movements of freight between the South and the North. Section 1(4) of the Act also provides that the carriers are entitled to just, reasonable and equitable divisions of the joint rates applicable to these movements, and Section 15(6) of the Act provides that the Commission may "after full hearing upon complaint or upon its own initiative . . . prescribe the just, reasonable and equitable divisions thereof to be received by the several carriers . . ." (49 U. S. C. § 15(6)).

VIII.

In 1947, the Commission instituted a general investigation into the lawfulness of the divisions of rates on railroad traffic moving between the North and the South. In 1953, the Commission entered an order prescribing a uniform scale of "prorating factors" under which the percentage division of each rate to be received by Northern and Southern railroads is calculated by providing a terminal allowance plus an allowance for the line-haul service performed by each group of railroads. *Official-Southern Divisions*, 287 I. C. C. 497, 547, 552. Under this scale, allowances for terminal and for line-haul services are identical for each group of railroads, each group receiving the same allowance for terminal service plus the same allowance per mile for the mileage haul performed in handling each shipment of freight traffic. This uniform scale is the present basis for dividing joint rates on substantially all freight traffic (ex-

cepting coal and coke made from coal) moving between the North and the South.

IX.

In 1956 the Northern lines filed a petition with the Commission requesting a general reopening of the *Official-Southern Divisions* investigation. The Northern lines did not activate their petition until 1959, in which year the Commission reopened the investigation. The Southern Governors' Conference and the state regulatory commissions of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee sought and obtained leave to participate in the investigation as representatives of the public in their respective states.

X.

In their petition, and throughout the reopened proceedings before the Commission, the Northern railroads asked the Commission to prescribe an inflation in the "prorating factors" of the Northern railroads so that the Northern railroads, instead of receiving compensation on the basis of the same factors as the Southern railroads, would receive greater compensation than the Southern railroads for the same amount of terminal service and for the same amount of mileage service.

XI.

In addition to resisting the request of the Northern railroads for inflated divisions, the Southern railroads asked for affirmative relief in the reopened proceedings before the Commission. In doing so, the Southern railroads raised, as a separate and distinct issue to be determined in those proceedings, the question of the lawfulness of the construction of the present uniform divisional scale. The Southern railroads claimed that the terminal allowance included in the initial mileage block of the uniform scale was excessive under the standards of Section 15(6), and that such an excessive terminal allowance was prejudicial

to railroads principally interested in traffic moving a longer haul in the South than in the North.

XII.

On February 3, 1965, the Commission made its report and entered its order, both of which were served upon the parties on March 2, 1965. In its report (325 I. C. C. 1), marked as Exhibit A, annexed to this Complaint and made a part hereof, the Commission resolved the aforesaid issues as follows:

(1) The Commission found that the existing scale of prorating factors contained a terminal allowance included in the initial mileage block that is excessive to the extent of 37 integers; and,

(2) The Commission accorded the Northern lines an inflation in their divisional "prorating factors." The new divisions were prescribed in the form of two separate scales of "prorating factors." The scale prescribed for application to service in the North contains factors which are 45 percent higher for terminal and border interchange service and 10 percent higher per mile for line-haul service than the scale prescribed for service in the South.

In accordance with its determination of these two issues, the Commission, in its order of February 3, 1965, marked as Exhibit B, annexed to this Complaint and made a part hereof, ordered that the participating railroads, including plaintiffs, be required to establish on or before April 20, 1965, and thereafter to apply, the newly prescribed divisions for general freight traffic between the North and the South.

XIII.

The Commission based its prescription of higher divisional factors for the North directly and exclusively upon its findings as to relative cost of service. The Commission found that its order would produce increases in the reve-

nues of Northern railroads and corresponding decreases in the revenues of Southern railroads in an aggregate amount of $7,948,004 per year. The Commission did not find the effect that its order would have upon the revenues of individual railroads, either Northern or Southern railroads. The Commission did not find the effect of the inflation which it prescribed for the North either upon individual railroads or upon the railroads as a group.

XIV.

The Commission's report contains no findings which relate to evidence of record the specific cost factors used in the construction of the divisional scales which it prescribed. Plaintiffs are unable to trace these cost factors to evidence in this record. From the record, it can be calculated that the application of the divisional scales prescribed by the Commission would reduce the revenues of the Southern railroads by $8,745,000. From the record, it can also be calculated that the inflation prescribed by the Commission would accord to the Northern railroads approximately $16 million per year more than those Northern railroads would receive under the uniform divisional scale found by the Commission to be proper.

XV.

The Cost Finding Section of the Commission is composed of employees of the Commission engaged in, among other duties, the performance of investigative or prosecuting functions relating to the application of costs to rates on freight traffic between the North and the South. The Cost Finding Section furnished advice to the Commission's Examiners, and to the Commission, which was relied upon in the determination of the issue of relative cost of service in the proceedings in this case. In furnishing such advice, the Cost Finding Section resorted to factual data, and assumptions with respect to factual data, not contained in the record in this proceeding.

XVI.

This action is brought to obtain judicial relief from the Commission's order of February 3, 1965. This order constitutes final agency action for the purpose of judicial review pursuant to Section 10(c) of the Administrative Procedure Act (5 U. S. C. § 1009(c)).

XVII.

The Commission's order dated February 3, 1965, to make effective on and after April 20, 1965, a new basis of divisions on traffic between the North and the South is unlawful and is in violation of the Interstate Commerce Act (49 U. S. C., Sec. 1, *et seq.*), and the Administrative Procedure Act (5 U. S. C., Sec. 1001, *et seq.*), and the Due Process Clause of the Federal Constitution (Amendment V), insofar as it establishes an inflation in divisional factors for the Northern railroads:

(1) The Commission made no findings with respect to the threshold issue of the lawful standards for determining the adequacy of cost evidence to support an inflation in divisions.

(2) The Commission's determination of higher costs for service in the North is in violation of lawful standards, and in disregard of the legal requirements that—

(a) the Northern railroads, as proponents of an increase in their revenues through an inflation in their divisional factors, had the burden of proving their right to such an inflation;

(b) the Northern railroads, having in their exclusive possession the data disclosing their actual costs of handling the freight traffic in issue, had the burden of coming forward with that data; and,

(c) when confronted with a record containing non-comparable or otherwise inadequate cost data,

the Commission had an affirmative responsibility for the development of an adequate record.

(3) The Commission did not adhere to any rational or consistent standard for determining the relative cost of handling freight traffic between the North and the South but relied upon costs influenced by, and attributable to, other traffic not at issue in this proceeding.

(4) The Commission failed and refused to make findings, or to state the reasons or basis for its decisions and conclusions, with respect to material issues of fact, law and discretion.

(5) The Commission erred in relying upon findings and conclusions which are arbitrary, are unsupported by substantial evidence, or are based upon factual data, or assumptions with respect to factual data, not contained in the record in this proceeding.

(6) The Commission erred in arbitrarily refusing to permit plaintiffs to impeach, or even to make an offer of proof which would impeach, a witness for the Northern railroads testifying upon a material issue.

(7) The Commission erred in refusing to reflect changes in cost relationships resulting from railroad actions designed to eliminate excessive capacity.

(8) The Commission erred in refusing to give effective consideration to the relative efficiency with which the carriers are operated and the relative importance of their transportation services to the public.

(9) The Commission has prescribed an inflation in the divisions of the Northern railroads that would severely reduce the revenues of plaintiffs without making findings of, or giving effective consideration to, the revenue loss imposed upon individual railroads or groups of railroads.

(10) The Commission's action rests upon an unlawful conception of the rule that there must be evi-

dence typical in character and ample in quantity with respect to the divisions and services performed under the particular rates being divided.

(11) The Commission erred in failing to articulate a rational basis for the determination of lawful divisions consistent with Section 15(6) of the Interstate Commerce Act in light of the National Transportation Policy.

(12) Plaintiffs were denied the full and fair hearing to which they were entitled by law.

XVIII.

The Commission threatens to enforce the part of its order dated February 3, 1965, requiring that the Southern railroads accord the Northern railroads an inflated basis of divisions on and after April 20, 1965, and said order will, if enforced, cause immediate and irreparable injury to plaintiffs. As specific grounds for the issuance of a temporary restraining order and for the issuance of an interlocutory injunction pending final disposition of these proceedings, plaintiffs allege, in addition to the facts heretofore set forth, the following:

(1) If plaintiffs refuse to comply with the part of the Commission's order prescribing an inflation in the divisions of the Northern lines, such refusal will constitute a violation of Section 16(8) of the Interstate Commerce Act and such refusal may subject plaintiffs to statutory penalties of $5,000 for each offense, each day of such refusal being deemed a separate offense, and such refusal will expose plaintiffs to an action by the United States for the recovery of such penalties;

(2) If plaintiffs are required to comply with said part of the Commission's order, they will suffer an immediate and substantial loss of revenues which they receive as their share of the revenues from Official-Southern traffic. Plaintiffs are without any plain or

adequate remedy at law because a multiplicity of actions would be required to recover divisions from the Northern lines. Plaintiffs are without any administrative remedy because substantially none of the rates between the North and the South were "established pursuant to a finding and order of the Commission" within the meaning of Section 15(6) of the Interstate Commerce Act and are thus not subject to the Commission's power to require retroactive adjustments of divisions;

(3) No injury will be sustained by defendants or by the public through the issuance of a temporary restraining order and an interlocutory injunction pending final disposition of this proceeding.

WHEREFORE, plaintiffs pray that:

(1) A temporary restraining order issue, restraining operation, enforcement or execution of the order of the Commission dated February 3, 1965, insofar as it prescribes an inflation in divisional factors for the Northern railroads, pending hearing on the issuance of interlocutory injunction sought herein;

(2) Process may issue against defendants the United States of America and Interstate Commerce Commission;

(3) A court constituted as required by Title 28 of the United States Code, Sections 2284 and 2321-2325, consisting of three judges, be convened;

(4) The operation, enforcement and execution of said part of the Commission's order of February 3, 1965, be enjoined pending final hearing and determination of this action;

(5) Said part of the Commission's order of February 3, 1965, be set aside;

(6) Plaintiffs recover their proper costs;

(7) Plaintiffs have such other and further relief in the premises as in equity may be deemed meet and just by this Honorable Court.

No. 29885 [1]

OFFICIAL-SOUTHERN DIVISIONS

IN THE MATTER OF DIVISIONS OF JOINT RATES BETWEEN OFFICIAL AND SOUTHERN TERRITORIES

Decided February 3, 1965

Upon further hearing, present divisions of joint interterritorial rates between official and southern territories found unjust, unreasonable, and inequitable. Just, reasonable, and equitable divisions prescribed. Prior reports, 287 I.C.C. 497, 289 I.C.C. 4, 291 I.C.C. 90, 294 I.C.C. 739, and 298 I.C.C. 83.

REPORT OF THE COMMISSION ON FURTHER HEARING

2

FREAS, *Commissioner:*

By complaint in No. 29799, filed July 24, 1947, the northern lines assailed as unlawful the divisions of joint rates on citrus fruit from points in Florida to destinations

1. This report also embraces No. 29799, Akron, Canton & Youngstown Railroad Company et al. v. Aberdeen & Rockfish Railroad Company et al.

in official territory. Thereafter, on December 4, 1947, we instituted, on our own motion, the investigation in the title case for the purpose of determining whether the then existing divisions of joint class and commodity rates between points in official territory and points in southern territory (as both territories are defined in *Class Rate Investigation, 1939*, 262 I.C.C. 447, 457) were unjust, unreasonable, or otherwise unlawful. All railroad carriers in the two territories were named as respondents.[2] Thus, as originally instituted, the two proceedings brought in issue the divisions of all joint interterritorial rates between the North and the South, except those on coal and coke made from coal which were excluded by mutual consent of the parties.

The original principal decision dated January 12, 1953, 287 I.C.C. 497, called the first 1953 report, embraced all involved traffic. By it, we prescribed primary divisions based upon equal mileage factors for the northern and southern lines, except that as to joint proportional rates on grain and grain products from East St. Louis, Mo., Louisville, Ky., and Cincinnati, Ohio, to points in southern territory, the northern factors prescribed were 75 percent of the northern general factors. That report also provided that arbitraries which were included in the joint rates should be deducted before prorating and that in lieu of specific apportionment of the arbitrary in respect of the rates on citrus fruit from Florida to official territory one percentage point should be deducted from the northern division and added to the southern division.[3] Also in that report the dividing points for such primary divisions were

2. Individual carriers will sometimes be referred to by their initials or other short titles.

3. Southern lines now ask that these findings relating to arbitraries be affirmed. Northern lines voiced no objection thereto, although they include as an arbitrary to be deducted before prorating an excess of $57 per car in the rates on vegetables to New York over the rates to New Jersey. This latter matter is discussed separately hereinafter and is denied. Under the circumstances, the prior findings as to arbitraries will be adopted herein.

fixed at the points of actual interchange rather than at the territorial boundaries.

In a report on reargument, 289 I.C.C. 4, decided May 26, 1953, called the second 1953 report, the prior report was modified so as to make the prescribed divisions applicable only to and from the existing primary dividing points. This report also postponed the effectiveness of the prescribed divisions to and from points on the Norfolk Southern
3 Railway Company, the Atlantic and East Carolina Railway Company, and the Beaufort & Morehead railroad Company (A. T. Leary, lessee) pending further hearing. The prescribed divisions became effective on July 15, 1953.

Upon petitions of various parties the findings in the two prior reports were interpreted and certain conclusions were revised in three supplemental reports. In 291 I.C.C. 90, of November 2, 1953, the definition of northern lines was broadened to include the Toledo, Peoria & Western Railroad Company, and the proceeding was reopened for further hearing with respect to divisions of rates between points on certain western trunklines and points in southern territory where no northern (official territory) carrier was a party to such rates, and with respect to divisions of joint interterritorial rates between points on the line of the Atlantic and Danville Railway Company west of Suffolk, Va., and points in official territory. The third and fourth supplemental reports, 294 I.C.C. 739 and 298 I.C.C. 83, made certain interpretations of previous findings.

On November 2, 1956, the northern lines petitioned for general reopening of these proceedings for further hearing and for modification of the order of January 12, 1953, as modified by the order of May 26, 1953. The petition was held in abeyance at the request of the interested parties until April 1, 1959, when the northern lines asked that the petition be processed. After replies had been duly filed, we reopened the proceeding for further hearing by order

dated July 20, 1959. The scope of the divisions now at issue is in some respects more limited than that covered in the 1953 reports. The joint interterritorial rates now excluded and the reasons therefor are listed in appendix A hereto.

The instant proceedings have been the subject of lengthy hearings during which considerable evidence was adduced by all parties in light of the criteria of section 15(6) of the Interstate Commerce Act. The hearing examiners found the present divisions unjust, unreasonable, and inequitable, and prescribed new divisions. Exceptions to the recommended report and order were filed by the official territory respondents, the southern territory respondents, and jointly by the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners. These parties also filed replies. Exceptions were also filed by the Norfolk Southern Railway Company and the North Carolina Utilities Commission. We have heard the parties in oral argument. Our conclusions differ in part from those recommended.

4 We consider the examiners' statement of facts to be substantially correct, as material, and in this report adopt it as our own. We have used here verbatim certain portions of that statement where necessary for clarity of discussion.

Prior to our consideration of the evidence, however, certain preliminary matters must be resolved. Initially, the southern lines contend on exceptions that our Section of Cost Ending has consulted with and furnished advice to the examiners upon the issues, and although the southern lines specifically requested that they be given notice of and an opportunity to participate in any such consultations they were denied this right. Such action is said to deny the full and fair hearing guaranteed by section 15(6) of the Interstate Commerce Act, sections 5, 7, and 8 of the Ad-

ministrative Procedure Act, and the fifth amendment to the Constitution.

In our opinion, hearing examiners and the Commission itself may properly consult with staff members of the cost section or receive from them analyses of the cost evidence in the record, and such advice or analyses need not be furnished to the parties when given or prepared by cost section employees who have neither testified nor prepared exhibits in the case. See *United States v. Morgan,* 313 U.S. 409 (1941); *T.S.C. Motor Freight Lines, Inc., v. United States,* 186 F. Supp. 777 (S.D. Tex. 1960), affirmed *sub nom. Herrin Transportation Co. v. United States,* 366 U.S. 419 (1961). Any such cost section assistance is a part of, and solely in aid of, the internal process of decision. There was no error prejudicial to the southern lines. The southern lines also contend that the examiners erred in refusing to receive or mark certain exhibits dealing with switching minutes and empty-return ratios. However, the examiners' ruling related to exhibits offered after the southern lines had rested their case and after the date fixed for the submission of their evidence. Such action was in accord with the procedural order adopted in this proceeding. It did not constitute an abuse of discretion nor deny the southern lines a fair hearing. The ruling is affirmed.

The northern lines contend that the examiners erred in rejecting certain portions of their rebuttal cost exhibit. The involved rejected data was found by the examiners to be new and additional material beyond the scope of rebuttal. Since the northern lines refused to incorporate the material as part of their case in chief and to accord the southern lines the right of rebuttal, the examiners were correct in their ruling that the matter constituted improper rebuttal and in excluding it.

5 Finally, at oral argument, counsel for the southern lines in response to a question by counsel for the northern lines indicated an intent to rely on the holding as

to the typical evidence rule set forth in *Atchinson, T. & S. F. Ry. Co. v. United States,* 225 F. Supp. 584 (D. Colo. 1964), hereinafter called the *Western Trunklines* case. There, the court in reviewing the *Orient* case (*United States v. Abilene & S. Ry. Co.,* 265 U.S. 274 (1924)) and other decisions, held that in finding an existing scale of divisions unlawful the Commission cannot rely exclusively on aggregate or average data in making this initial determination but must have representative evidence which it considers typical in character and ample in quantity to permit a determination with respect to each division of each rate of every carrier. As we understand the position of the southern lines at oral argument, they contend that no such evidence is of record and that only "conglomerate averages" are shown.

The court in the *Western Trunklines* case stated, at page 595:

> Far from precluding Commission consideration and use of average data, the opinion in the *Orient* case states that "aggregate results should properly be taken into consideration by the Commission." The point of the *Orient* case is that the Commission may not rely wholly and exclusively on average or aggregate data. Before it relies on average or aggregate data, the Commission must make sure that the divisions formula under consideration (although seemingly just and equitable when viewed in terms of its impact on a group of railroads as a group), has not been construed in such a way that its impact on any particular division of any particular rate as applied to any particular carrier is unjust. This the Commission must do by considering evidence fairly representative of each division of each rate of every carrier in order that some inequity which might remain undisclosed by average or aggregate data is not permitted to slip in unnoticed.

It also indicated at page 592:

> The "typical evidence" rule in divisions cases, however, does not have to do with individual shipments made by particular carriers, as plaintiff's contend; rather, it has to do with particular divisions of particular rates among particular carriers. Evidence showing the volume and type of traffic moving subject to the representative rates, although highly probative, and probably otherwise essential to a just and equitable decision, is not absolutely required by the "typical evidence" rule.

Counsel for the northern railroads then indicated at the conclusion of oral argument that, if the Commission chooses to rely on the *Western Trunklines* case, it should require both sides to submit the abstracts of settlement statements among the various carriers which would reflect the specific data mentioned in the court's holding. It was urged,
6 however that the holding in the *Western Trunklines* case was erroneous, and that, in any event, no lack of evidence had been advanced of record by the southern lines, except perhaps as to grain and grain products, during the lengthy hearings herein. Both sides had freely exchanged such settlement sheets during the hearing, but they were not made part of the record. If submission of such data were required, the northern railroads indicated that they would waive cross-examination.

Except as hereinafter indicated, necessary typical evidence is of record, and we have properly considered and evaluated it. At this point, we note that the southern lines on brief have characterized their traffic study as providing—

> The most current data available with respect to the normal annual movement of Official-Southern traffic ever presented to the Commission. This information shows the services performed and revenue received by each carrier participating in the movement of the precise traffic at issue. It measures the participation of

Class I and Class II railroads, individually and as groups, in each territory, and shows the relative importance of Official-Southern revenues and ton miles to the railroad groups and individual carriers.

Moreover, both the northern and southern lines' traffic studies are based on samples of the interline abstracts, the regularly maintained basic records, freely exchanged at the hearing, on which interline revenues from particular rates are divided among each participating carrier. Under the circumstances, as will be further shown and except as hereinafter indicated, we find the typical evidence contention of the southern lines to be without merit. To the extent that the *Western Trunklines* case also requires due consideration of all of the criteria of section 15(6), we have done so.

Traffic Studies

Introduction.—Both the northern and the southern lines made traffic studies for use in this proceeding. The northern lines introduced two studies developed from sampling, embracing carload shipments (except coal and coke made from coal) moving on joint rates (including aggregate-of-intermediate rates which automatically displace single-factor joint rates) between points in southern territory and points in official territory. The southern lines' study, also developed in accordance with a sampling procedure, was broader in scope and coverage than that of the northern lines. The studies of both groups do not
7 cover less-than-carload traffic.

The southern lines' tabulations show many of the characteristics of the traffic in the same form as that produced in the northern lines' study. The southern lines' study, unlike that of the northern lines, does not make separate showings as to citrus fruit and vegetables, such traffic having been included in the overall general study. However, the southern study shows separately the traffic units and revenue, and permits an application and comparison of costs thereto. Coal and coke made from coal

are not included in the southerns' final tabulations. Certain classes of traffic are not embraced in the study since, for reasons shown, the southern lines deem the divisions of rates thereon not here in issue. These segments are: (1) traffic to and from western carriers' stations in official territory, (2) traffic subject to grain proportional and reshipping rates subject to docket No. 29885 prescribed divisions, both categories having been excluded for the reason that no evidence thereon was introduced by an official territory respondent, (3) border traffic between border points and official territory which was the subject of litigation in docket No. 32055 (the parties have stipulated that this traffic is not in issue), (4) Norfolk Southern general traffic between stations on that line and points in official territory, having been excluded because docket No. 29885 divisions were not prescribed thereon and that respondent made a separate presentation thereof in a study including its overhead traffic, and (5) traffic to and from Morehead City, N.C., on the Atlantic & East Carolina, having been excluded for the same reasons as in (4) above.

Northern lines' general traffic study.—The northern lines' general traffic study embracing traffic for the months of March and September 1956 was expanded to a year's basis by multiplying by six. This study, so expanded, embraced a movement of 983,664 cars, 28,416,839.4 tons, with total revenue of $450,909,348. Northbound traffic exceeded the southbound by substantial amounts. About 70 percent of the carloads and 74 percent of the through revenue were in the manufacturers and miscellaneous category. About 75 percent moved in boxcars and refrigerator cars. As in the original case (the first 1953 report), the most important interchange points were Cincinnati, Richmond, and Potomac Yard, Va., with over half being interchanged at Virginia gateways, the remainder at the Ohio River crossings.

The average hauls on the general traffic per car-mile and per ton-mile are shown below:

8

	North	South	Total
Car-miles	*Miles*	*Miles*	*Miles*
Route of movement	408	519	927
Short line	362	475	837
Ton-miles			
Route of movement	392	508	900
Short line	347	464	811

The average hauls of the northbound traffic (not including Florida vegetables) in the southern lines' general 1947 study (based on average short-line ton-miles) were 370 miles in the North and 500 miles in the South, and of the southbound, 325 miles in the North and 440 miles in the South. On the same basis, the present northern lines' general traffic study shows on northbound traffic, 371 miles in the North and 496 miles in the South, on southbound, 313 miles in the North and 419 miles in the South, and on total traffic 347 miles in the North and 464 miles in the South, compared with the 1947 study figures of 345 miles north and 478 miles south.

The total revenue of $450,909,348, including the arbitraries was divided between the two groups, 45.44 percent north and 54.56 percent south. The study shows that the northern lines performed 42.8 percent of the short-line ton-miles of service, and 44 percent of actual route of movement car-miles, the southern lines 57.2 and 56 percent, respectively.

The citrus fruit and vegetables study.—This northern lines' study, also developed by sampling, covered the movement of these commodities from southern territory to points in official territory on lines of the northern lines for the 5 months, January through May 1956, and embraced 43,810 cars (713,618 tons). The total revenue was $19,660,843, which was settled 33.38 percent North and 66.62 percent South. The northern carriers performed 29.4 percent of the short-line ton-miles of service, the southern, 70.6 per-

cent. The preponderance of this traffic moved through Richmond and Potomac Yard. Cincinnati was the important Ohio River gateway.

The following table shows the average short-line hauls on this traffic:

9

	Short-line miles		
Car-miles	*North*	*South*	*Total*
Citrus fruit	356	830	1,186
Vegetables	360	893	1,253
Weighted average	359	871	1,230
Ton-miles			
Citrus fruit	355	830	1,185
Vegetables	361	890	1,251
Weighted average	358	860	1,218

Southern lines' study.—This study for the 12-month period July 1958 to June 1959 produced an estimated total of 967,554 cars containing 28,055,720.7 tons of freight yielding total through freight revenue of $496,086,766, including arbitraries totalling $1,365,705. The study included traffic originating or terminating on western or southern lines in official territory when a northern line participated in the haul, and, as stated above, coal and coke made from coal and certain other classes of traffic, not considered by the southern lines as here in issue, were not included in the final tabulations.

By directional flow, by commodity groups, and by types of equipment, this study follows closely those characteristics as produced in the northern lines' study. As in the northern study, Cincinnati led as the principal primary breakpoint, with Richmond and Potomac Yard in second and third place. Of the total cars embraced in the study, 55.4 percent passed through the Ohio River-Illinois-Kentucky gateways, and 44.6 percent through the Virginia gateways.

The average hauls per car and per ton, both route-of-movement and short-line, for the total traffic included in the study are shown below:

	North	South	Total
Per car	*Miles*	*Miles*	*Miles*
Route of movement	420	567	987
Short line	372	522	894
Per ton			
Route of movement	410	557	967
Short line	361	511	872

10

The following table compares the "as settled" division of the total through revenue in the two groups' studies:

	Combined northern lines' studies, including arbitraries	*Southern lines' study*	
		Including arbitraries	*Excluding arbitraries*
	Percent	*Percent*	*Percent*
North	44.93	44.64	44.75
South	55.07	55.36	55.25

The northern lines point out that the southern study is subject to criticism for failure to include Norfolk Southern traffic so as to permit such traffic to be considered separately or together with Southern traffic as a whole. As stated, the Norfolk Southern submitted a separate presentation for itself with respect to traffic originating or terminating on its line and passing over its line to or from stations on the Atlantic & East Carolina and the Beaufort & Morehead. The divisional situation as to these lines is the subject of later discussion herein. Inclusion of Norfolk Southern originated or terminated traffic reduces by 8 miles the average haul in the South, based on average short-line ton-miles.

Preliminary conclusions as to the traffic studies.—The studies of the two groups are basically similar as to the

general characteristics of the traffic. The least similar results are the average hauls. These differences may be accounted for principally in the difference in the periods studied as well as the inclusion or exclusion of certain traffic in the one and not in the other. The northern study does not include an estimated annual movement of 46,201 cars which originated or terminated on western district lines on which the northern lines performed only intermediate service. Also excluded was traffic (4,092 cars) to or from southern lines' stations in official territory on which the northern lines performed only intermediate service. A third category not included in the northern lines' study (2,955 cars) which the southern study embraces was traffic between the South and Canadian points moving on combination rates breaking at the international boundary on which the revenue accruing to domestic carriers is divided on the 1953 prescribed basis. On the other hand, the northern study includes traffic between points on the Norfolk & Western in southern territory and points in official territory. The extent of this traffic is not revealed but its inclusion tends to understate the southern lines' average haul since such traffic always has a relatively short haul in the South.

11

The northern study does not reflect the changes in effective divisions which have occurred since 1956, brought about by vacation of the 1953 order as to certain categories of traffic as requested by mutual petitions. Thus, the "as settled" revenue which the northern lines received is understated under present divisional bases. This is particularly true as to vegetables. Since 1957 most vegetable traffic to the New York rate group has moved on per-car rates, the divisions thereon providing that the charge of $57 per car in the New York City rates, over and above the rates to Jersey City, N. J., shall accrue to the delivering lines before prorating. Thus, the northern lines' study shows that during the first 5 months of 1956 the northern lines received 32.23 percent of the "as settled" revenue on

northbound fresh vegetables whereas the southern lines' study of 21,785 cars of fresh vegetables moved in a year subsequent to the establishment of the per-car rates shows the northern lines received 35.28 percent. The southern study includes vacated order traffic: (1) liquid soda and soda ash from Saltville, Va., to Kingsport and Port Rayon, Tenn., and (2) peaches and fresh vegetables moving on per car rates to piers 22, 27, 28, and 29 at New York City. These two categories represent only 1,209 cars, an inclusion of little significance, but the divisions thereon remain in issue here as do the divisions on trailer-on-flatcar traffic not covered by stipulation of the parties.

We agree with the aforementioned characterization by the southern lines, stated earlier, as to the evidentiary worth of their traffic study. The basic abstract sample of southern lines consists of 100 percent of those abstracts covering $10,000 or more of revenue ("A" abstracts) with a 5-percent random sample of the remaining abstracts ("B" abstracts). The northern lines accepted the reliability of the southern lines' study by using it as the basis for their own final cost computations, and we have used the service units produced by the study in our restatement of the costs. Moreover, a careful consideration of the traffic studies and the abstract samples reveals that there are typical and ample representations of the roads involved, large and small, covering typical movements in ample number for a normal annual period with appropriate adjustments to reflect seasonal variations. A totalling of the divisions on particular traffic (which reflects the rates involved) permits an appropriate consideration of individual carriers and their movements.

12

ECONOMIC TRENDS

At pages 501-505 of the first 1953 report, 287 I.C.C. 497, various statistical comparisons were set forth which supported a conclusion "that in the past 20 years the South has bettered its relative economic position in comparison

with the North" and "that the southern railroads have benefited from this improvement in the economic situation of the South." The record in this reopened phase indicates a continuation of these trends. The number of employees in the South in 1958 increased 28 percent over 1947, the number in the North was approximately the same in 1958 as in 1947, while there was an increase of 12 percent for the entire country. In absolute figures, the North in 1958 had almost 10 million employed persons, 5 times as many as the South. The value of manufactures for the Nation almost doubled between 1947 and 1958. It increased about 67 percent in the North, and slightly more than doubled in the South. From 1930 to 1958 the population of the United States increased 41 percent and in the southern States, 44 percent. The percentage population gains during the 20 years 1930 to 1950 were 22.7 percent for the entire country, 24.5 percent in the South, and 18.8 percent in the North, as shown in the 1953 report. A southern respondent in 1960 represented "that the South's economic development since World War II has outpaced the national rate of growth in practically every category you can name." Data adduced also show increases for the South of 40 percent in the number of manufacturing establishments, and 57 percent in the number of industrial and commercial firms, compared with respective national increases of 26 and 25 percent.

However, the South, as an area, was below national levels in several respects on a per capita basis. In 1956 manufacturers' expenditures for new plants and equipment per capita in the South were $48 as compared with $67 on a national level. In the same year value added by manufacture per capita in the South was $500 as compared with $835 in the Nation. In 1955, total bank assets per capita in the South were $670, or 48 percent of the national level of $1,398. The total value of farm products sold per capita in the South in 1954 was $131 as compared with $153 in the

Nation, while retail sales per capita in that year were $815 in the South compared with the national average of $1,054.

Operating and Revenue Results

There has been a relatively greater increase in freight traffic in the South than in official territory since 1947. The number of cars and tons handled within the South in 1958 were 100.40 and 120.21 percent, respectively, of that for 1947 while corresponding percentages for official territory were 64.14 and 68.19. Revenue ton-miles for the southern region in 1958 were 99.6 percent of those shown for 1947, and revenue tonnage originated and terminated in 1958 was 105.5 and 113.6 percent, respectively, of that handled in 1950. Corresponding percentages for the eastern district and Pocahontas region were for revenue ton-miles, 85.4 percent, and for tons originated and terminated, 77.3 and 77.5 percent, respectively. Revenue tons originated and terminated in the entire country in 1958 were 87.9 and 91.3 percent, respectively, of that in 1950.

As shown below, there has been a relatively greater increase in freight revenue of the southern lines since 1950 than in that of the northern lines:

Freight revenue	*Southern region*		*Eastern district and Pocahontas region*	
for—	*Amount*	*Percent*	*Amount*	*Percent*
1950	$1,098,229,000	100	$3,374,542,000	100
1958	1,175,318,000	107	3,217,516,000	95.3

The average net ton-miles of revenue and nonrevenue freight per annum in the southern region for 1956-58, 91.8 billion, were 2.1 billion more than those for 1950, and 37.9 billion greater than in 1940. The annual average for the eastern district and the Pocahontas region in 1956-58 was 253.2 billion, 6.3 billion less than in 1950, and 53.8 billion greater than in 1940.

In the first 1953 report, 287 I.C.C. at page 503, the operating ratios of the two groups of carriers shown for the

years 1941-50 indicate that ratios for the southern lines were consistently below the ratios of the northern lines. The present record does not show freight operating ratios separately. The total operating ratios continue to favor the southern lines as shown below:

	Southern region	*Eastern district and Pocahontas region*
Year	*Percent*	*Percent*
1951	75.14	79.58
1952	73.26	79.03
1953	72.64	78.79
1954	76.00	81.14
1955	72.79	77.09
1956	74.73	77.62
1957	77.68	79.53
1958	78.61	81.20
1959	76.22	80.52

14

The first 1953 report also showed that the increase in net railway operating income received by the southern lines in the period 1941-51 had been relatively larger than for the northern lines. Continuation of that trend is shown below:

Net railway operating income

Annual average for—	*Southern region*		*Eastern district and Pocahontas region*	
	Millions	*Percent*	*Millions*	*Percent*
1948-53	$157.8	100	$395.4	100
1954-59	162.4	103	361.1	91

The above table reflects operations of the two groups for the 6 full years prior to and after the presently prescribed divisions became effective under which the prior divisions giving the southern lines on general traffic a 25-percent factor advantage was eliminated. Revenue in 1956 for the northern lines from the traffic at issue was 6 percent of their total freight revenues, while for the southern lines the percentage was 21.4.

Rates of return on depreciated book investment, set forth in the first 1953 report, 287 I.C.C. at page 503, indicate that for the years 1941 to 1951 those for the southern lines consistently exceeded those for the northern lines. In this phase of the instant proceeding, the rates of return based on the net investment [4] are as follows:

Year	*Southern region percent return*	*Eastern district and Pocahontas region percent return*
1952	5.27	3.86
1953	5.45	4.01
1954	4.48	2.89
1955	5.45	4.19
1956	5.02	4.05
1957	4.14	3.29
1958	3.68	2.00
1959	3.63	2.27

Again comparing these statistics for the 6 full years since the present divisions became effective with the 6 years prior thereto, the average rate of return (net investment method) for the southern lines was 4.40 percent in 1954-59 and 4.79 percent in 1948-53, while the northern lines' average was 3.11 and 3.60 percent, respectively.

The southern lines take the position that returns for the calendar years 1958 and 1959 should not be used for comparative purposes to determine future divisions in view of the recession in business activity affecting the first half of 1958 and the severe steel strike affecting the last half of 1959, which affected the northern lines to a greater degree than the southern lines. The rates of return of both groups for these years were lower than for any other year since 1949. A comparison, omitting 1958 and 1959, shows average annual rates of return for the southern lines, 1954-57, 4.77

4. The net investment method is the carriers' investment in road and equipment, material and supplies, and cash, less accrued depreciation and amortization at the end of the year under consideration.

percent and 1950-53, 5.19 percent and for the northern lines during the same respective periods, 3.60 and 3.76 percent. Thus, the spread between the two groups in the 4-year period before the present divisions became effective, 1.43 percentage points, was reduced to 1.17 in the like period subsequent thereto.

The following table shows changes in revenue per ton and revenue per ton-mile for the two groups in the first 4 years since the present divisions became effective:

	Official territory		*Southern region*	
	Revenue per ton	*Revenue per ton-mile*	*Revenue per ton*	*Revenue per ton-mile*
Year		*Cents*		*Cents*
1954	$2.98	1.55	$2.98	1.46
1955	2.91	1.48	2.89	1.40
1956	2.95	1.49	2.82	1.43
1957	3.14	1.56	2.97	1.48

The southern lines observe that the location of new industries in the South near abundant sources of raw materials has meant that the long-haul movement of manufactured products into the South has been replaced by the movement of low-rated raw materials to nearby plants. Increased population in the South has caused finished products to be consumed locally, and the southern lines contend that they are left with less remunerative movements of low-rated raw materials. As an example, the Seaboard handled 33.9 percent more tonnage of low-rated commodities in 1959 than it did in 1951. Between the same years its tonnage of high-rated traffic increased only 5.6 percent. Its revenue increases in the same period were 28.7 percent on low-rated and 2.4 percent on high-rated commodities. The northern lines' tonnage and revenues in the eastern district for both groups of commodities decreased in 1959 compared with 1951. The decrease on low-grade tonnage and revenues was 27.4 and 15.8 percent, re-

16

spectively, while on high-grade, 22.4 and 15.2 percent, respectively.

In August 1959, 12.1 percent of the northern lines' cars were undergoing or awaiting repairs; the figure for the southern lines was 5.3 percent. In July 1959, 6.7 percent of the North's locomotives were in or awaiting shop; for the South, 3.1 percent. Using the 4-year period of 1950-53 as a base index of 100 for new rail laid in replacement, the northern lines' indices were 60.6, 60.9, 56.6, 54.4, and 20.5 in the 5 years, 1954-58, respectively, while the respective indices for the southern region roads were 101.2, 90.9, 76.7, 80.7, and 49.8. Indices for crosstie and secondhand rail replacements in the two groups follow similar patterns during the same 5-year period.

The first 1953 report, 287 I.C.C. at page 505, discussed the efforts by each group to show that its revenue was more adversely affected by motor and water competition. However, it was not found there that such competition would be felt more keenly in the future by one group than by the other. Facts respecting such matters, including truck registration, highway construction, truck versus rail tonnage, revenue, and ton-mile revenue, waterborne diversions, and competitive rate reductions, were shown. However, those factors are not shown to have a measurably greater effect on one group as against the other on interterritorial traffic. We find that no adjustment of divisions is in order as a result of competition from other modes of transport.

Efficiency of Operation

In prescribing divisions the Commission is required by section 15(6) of the act to "give due consideration, among other things, to the efficiency with which the carriers concerned are operated." In the original phase of this case the relative efficiency of the northern lines was the subject of substantial evidence directed to support the southern lines' assertion that "performance in the North reflects

less efficient operation than in the South." After reviewing the various statistical indicators of efficiency in the prior record, it was stated at page 519 of the first 1953 report: "In our opinion the figures disprove the charge that the northern lines are less efficiently operated than the southern lines * * *."

17 In this reopened phase, the southern lines do not question the relative efficiency, as such, of their opponents. Instead, they charge that the northern lines have been unwise in choosing to devote available funds to reduction of debt rather than making capital improvements in their transportation plant, that the primary problem confronting the northern lines must be met through the elimination of duplicate facilities and modernization of railroad plant, and that cost savings are available to those lines through elimination of excess and duplicate facilities.

The northern lines assert that the same conclusion as to relative efficiency as made in the first 1953 report is warranted upon this record. It was there stated at page 525:

> We do not interpret section 15(6) as requiring us to determine whether one group of carriers is more or less efficiently operated than another, but rather to give due consideration to any evidence which might tend to indicate that the showing as to cost of service is affected by wasteful or inefficient management.

The record shows that the traffic density in the North is appreciably greater than in the South. From this fact the southern lines reason that the unit costs shown in Rail Form A for recent years for the northern lines should be lower than for the southern lines. However, many factors other than density, as will be hereinafter discussed, affect the operating expenses of a group of railroads. In any event, railroads in the North, including the larger ones, are shown to be in the process of eliminating unnecessary facilities

and services. At the same time, the evidence shows that the northern lines exercised their best managerial judgment, when faced with rising debt, in dealing with problems affecting the cost of service at the time they were encountered. We find no basis for giving effect to criticism of such action. Nor is there a basis for criticizing the judgment of southern lines in expanding and developing their operations. Also the record does not establish that the northern lines' costs are overstated relative to the southern lines' costs as a result of differences in the timing of the modernization programs in each territory. It is true that the savings expected from proposed mergers and consolidations are not reflected in the cost studies of record. However, the southern lines themselves have noted that mergers are now going forward in all territories, including the South. If and when such proposed mergers are ultimately approved and finally consummated in both groups the savings produced thereby will be then reflected in the respective unit costs. The economies hoped to be effected thereby
18 and the savings exepected are not ascertainable for future operation to the degree required for any specific adjustment here of the cost studies of record. We find upon this record that the northern lines' cost of service is not shown to be affected by purported waste or inefficiency. More affirmatively, we find that both groups are being operated efficiently and that neither group should be considered as more or less efficient than the other.

Relative Cost of Service

It was stated in the first 1953 report, when prescribing the present divisions, that: "* * * it is to be the safest assumption for the future upon the facts before us that neither contesting group will have an appreciably lower basis of operating costs than the other,* * *." 287 I.C.C. at page 526. To demonstrate changed conditions, the northern lines presented evidence as to the relationship of territorial average costs, the trend of those costs over a period

of years, and the cost of moving the traffic at issue based on territorial average unit costs applied to traffic samples. They contend that their cost evidence reflects higher costs in the North than in the South for equivalent hauls and loads, that the difference has increased over a period of years, and that the division of the revenues which they receive for hauling the traffic at issue is less than their proportion of the costs of hauling it, thus proving the aforesaid assumption was not well founded.

The basic formula used by both parties was Rail Form A, entitled "Formula for Use in Determining Rail Freight Service Costs," which utilizes the expenses and statistics for a given year as reported to this Commission by the carriers as well as supplemental data derived from special studies made by the carriers. The traffic here at issue moves over three statistical and cost territories: the southern region south of the divisional breakpoints, the eastern district, and the Pocahontas region north of the breakpoints or border. The northern lines rely in these proceedings upon eastern district territorial costs as developed by Rail Form A. It is their view that such Rail Form A costs—unadjusted—should be used to measure the relative costs of service for the two groups of carriers involved.

The southern lines contend that eastern district territorial costs are appropriate only for the eastern district, and that Pocahontas region costs should be used for
19 the Pocahontas carriers; or that at least official territory cost should be used for official territory (made up of eastern district and Pocahontas region). It is also their view that territorial costs should be somewhat narrowed down to the North-South traffic in issue. Endeavoring to adjust Rail Form A costs to the interterritorial traffic in issue, there are a number of adjustments presented by the southern lines purportedly improving the accuracy of the territorial costs for the two groups of carriers. These adjustments are dealt with in full in subsequent treatment of this subject.

The following table shows the relative participation of the carriers in the traffic at issue as shown in the southern traffic study.

	Cars originated or terminated	*Percent*	*Car-miles*	*Percent*
Official-southern traffic north of gateway:				
Eastern district roads	769,700	79.55	276,278,108	67.98
Pocahontas roads	130,877	13.53	95,562,990	23.51
Class II roads ..	16,697	1.73	417,948	.10
Southern lines in official territory	4,092	.42	24,030,862	5.91
Western lines in official territory	46,201	4.77	10,108,571	2.49
Total	967,567	100.00	406,398,479	99.99
All traffic:				
Eastern district ..	25,434,220	——	6,124,710;420	——
Pocahontas region	5,056,002	16.6	1,397,141,776	18.6
Official	30,490,222	——	7,521,852,196	——
Official-southern traffic south of gateway:				
Southern region roads	894,461	92.44	532,811,465	97.15
Pocahontas roads	0	——	3,006,325	.55
Class II roads ...	55,829	5.77	3,228,070	.59
Western district roads	17,277	1.79	9,412,641	1.72
Total	967,567	100.00	548,458,501	100.01

The participation of the Pocahontas lines in the traffic at issue compared to all traffic is less when measured by cars originated and terminated and more when measured by car-miles. One is related to terminal costs and the other to line-haul costs. A part of the traffic at issue is carried over those portions of southern lines which extend into official territory and over those portions of western lines which extend into official territory and southern re-

gion. The relative participation of the Pocahontas lines in the issue traffic is not shown to be sufficiently different than in the total traffic so as to require separate costing, nor is there any sound evidentiary basis for applying western district costs to traffic moving in official territory which is carried on western lines which lap over into that territory. In view of the foregoing, we find that the most appropriate and reasonable approach to the determination of costs in official territory is the alternative urged by the southern lines; that is, official territory, costs for all traffic north of the gateways. A comparable basis in the South necessitates the use of southern region costs on traffic south of the gateways.

The northern lines presented evidence to show that the average unit costs for comparable service are higher in the North than in the South. The following summary table illustrates this point. The first six lines are based on the northern lines' application of Rail Form A and the last four lines on our cost section's application in its annual studies. These costs include a terminal service at one end only, reflect short-line miles, and are based on a load of 28.9 tons in boxcars.

Relation of northern to southern freight service costs

	100 miles	*300 miles*	*500 miles*	*1,000 miles*
	Percent	*Percent*	*Percent*	*Percent*
Official territory vs. South:				
1948	119	113	111	109
1956	131	123	120	117
1957	131	122	120	117
Eastern district vs. South:				
1948	125	119	117	116
1956	141	131	128	126
1957	141	132	130	126
Eastern district vs. South (cost section study):				
1948	124	116	115	113
1956	143	133	129	127
1957	143	133	131	128
1959	154	143	139	136

These costs indicate that levels thereof are higher in the North than in the South for like services, that official territory costs are not quite as high as eastern district costs, and that the northern lines' application of Rail Form A as compared to the cost section's study application results in a slightly lower relationship, particularly in more recent years.

The northern lines' application of Rail Form A differs from that of the cost section's annual studies in the following respects: (*a*) the use of a 6-percent rate of re-
21 turn without provision for Federal income tax in place of a 4-percent rate of return with provision for Federal income tax; (*b*) the base for return is book investment in road and equipment plus cash and material and supplies less recorded depreciation and amortization instead of on the basis of original costs except lands and rights, working capital, including material and supplies, less recorded depreciation and normalized amortization, plus the present value of land and rights; (*c*) the less-than-carload and passenger deficits are omitted from the constant costs; and (*d*) none of the costs of switching and terminal companies is included.

The northern lines' evidence as to the trends of relative costs over a period of years can best be summarized in tabular form as follows:

Northern percentage of total Form A costs at average hauls

	Citrus and vegetable traffic, refrigerator car— 16.3 tons	*General traffic, boxcar— 28.9 tons*
Average haul-miles:		
North	358	347
South	860	464

	Official territory	*Eastern district*	*Official territory*	*Eastern district*
	Percent	*Percent*	*Percent*	*Percent*
Northern lines' Form A computation:				
Year 1948	32.3	33.3	46.4	47.8
Year 1950	33.5	34.2	48.8	50.1
Year 1952	33.8	34.7	48.8	50.1
Year 1954	33.1	34.7	49.7	51.0
Year 1956	33.9	35.0	48.8	50.5
Year 1957	34.1	35.5	48.8	50.8

22

	Citrus and vegetable traffic, eastern district		*General traffic, eastern district*	
	Fully distributed costs	*Out-of-pocket costs*	*Fully distributed costs*	*Out-of-pocket costs*
	Percent	*Percent*	*Percent*	*Percent*
Form A cost from cost section annual study:				
Year 1947 as of Jan 1, 1949	32.9	33.5	47.0	49.0
Year 1948 as of Jan. 1, 1950	33.3	34.1	47.4	49.7
Year 1949 as of Jan. 1, 1951	31.9	31.8	46.7	47.5
Year 1950 as of Jan. 1, 1952	34.2	34.4	49.7	51.2
Year 1951 as of Jan. 1, 1953	34.5	34.5	49.9	50.8
Year 1952 as of Jan. 1, 1954	34.7	34.8	50.2	51.1
Year 1953 as of Jan. 1, 1955	34.2	34.3	50.0	51.2
Year 1954 as of Jan. 1, 1956	34.7	34.7	50.6	51.8
Year 1955 as of Jan. 1, 1957	34.9	34.9	50.5	51.5
Year 1956 as of Jan. 1, 1958	35.5	35.7	50.7	51.8

In the southern lines' traffic study, 69.3 percent of all car-miles were run by boxcars and 9.7 percent by refrigerator cars. The table above indicates that there was an increase in the northern lines' proportion of costs in the year 1950 but that the trend since that year is not pronounced. As to boxcar costs, the northern lines' computation shows no increase for official territory between 1950 and 1957 and only 0.7 percent for eastern district.

The out-of-pocket boxcar costs, based on our cost section's annual study, showed 0.6-percent increase from January 1, 1952, to January 1, 1958.

The northern lines priced out the traffic at issue as measured by their own traffic study both on the basis of Rail Form A unit costs of their own computation and on the basis of Rail Form A unit costs as computed by our cost section's studies. They also applied the cost section's unit costs to the southern lines' traffic study. The cost section costs used were at the fully distributed level; i.e., they included a ton and ton-mile apportionment of the constant costs. All costs were based on the year 1956 and included an allowance for loss and damage. The table following shows for each traffic study, the percentage of revenues received by the northern lines, and the percentage of costs incurred by them:

23

	General traffic (percent)			*Citrus and fresh vegetables (percent)*		
	Revenue	*Cost*	*Difference*	*Revenue*	*Cost*	*Difference*
Northern lines' traffic study:	45.44	——	——	33.38	——	——
Northern costs:						
Eastern district vs. southern region ..	——	49.78	4.34	——	34.62	1.24
Cost section study costs:						
Official territory vs. southern region ..	——	48.19	2.75	——	34.00	0.62
Eastern district vs. southern region ..	——	50.18	4.74	——	35.26	1.88
Southern lines' traffic study:	44.97	——	——	34.63	——	——
Cost section study costs:						
Official territory vs. southern region ..	——	47.34	2.37	——	33.69	(.94)
Eastern district vs. southern region ..	——	49.31	4.34	——	34.97	.34

The difference in the results for citrus and fresh vegetable traffic as between the two traffic studies reflects a revision in the divisions. The more recent southern lines' traffic study shows that the revenues as settled and the costs on this traffic are roughly equal. The following table indicates the dollar amounts involved on the general traffic:

	Traffic study of northern lines			*Traffic study of southern lines*		
	Percent		*Percent*	*Percent*		*Percent*
Total revenue ...	100.00	$450,909,348		100.00	$480,160,317	
Northern lines' share:						
Revenues as settled	45.44	204,889,448	100.00	44.97	215,915,212	100.00
Revenue if based on costs:						
Northern lines' costs ...	49.78	224,462,673				
Increase		19,573,225	9.6			
Cost section study costs:						
Official vs. southern ..	48.19	217,293,215		47.34	227,307,894	
Increase		12,403,767	6.1		11,392,682	5.3
Eastern vs. southern ..	50.18	226,266,311		49.31	236,767,052	
Increase		21,376,863	10.4		20,851,840	9.7

24 The southern lines urge that it is settled law that relative service costs are the decisive measure in determining just and reasonable divisions and that the costs of all roads participating in the official-southern traffic should be so applied and adjusted as to reflect the cost characteristics of the traffic here at issue. In order to develop the relative service costs of this traffic they applied Rail Form A adjusted unit costs at the fully distributed level for the year 1956 to their traffic sample described above. They presented the results of their cost studies in several different forms, but their principal cost evidence can be summarized as shown in the table below. It starts with the application of the costs as computed by the northern lines applied to the southern lines' traffic

study, then the unadjusted Form A costs applied to the same study, and lastly the Form A costs modified to include the effect of 12 adjustments they deem necessary.

	North of gateway	*South of gateway*	*Percent*	
			North	*South*
Total revenues as settled under present divisions	$221,430,000	$274,656,000	44.64	55.36
Northern lines' costs applied to southern traffic study:				
Eastern district and southern region	158,427,000	170,708,000	48.13	51.87
Official territory and southern region	148,424,000	170,708,000	46.51	53.49
Unadjusted Rail Form A costs—official territory and southern region ..	169,618,000	194,306,000	46.61	53.39
Rail Form A costs including 12 adjustments	152,808,000	201,916,000	43.08	56.92

All of these costs are territorial average costs based on the expenses and operations for 1956, all are at the fully distributed level, and all are applied to the southern lines' traffic study.

The unadjusted Rail Form A costs above result from the standard computation applied to each territory. The specific adjustments made by the southern lines in the unadjusted official territory and southern region unit costs developed by cost section annual studies are discussed in appendix B hereto in full detail.

Restatement.—The differences between the parties as to the cost evidence run to the degree to which territorial average costs should be modified to fit the specific traffic at issue, and to the meaning and significance of various data and statistics.

25 Both parties computed the cost of service based on the southern lines' traffic study and the territorial average costs (1956) in statement No. 2-58, Rail Carload Cost Scales by Territories, prepared by the cost finding section. The southern lines computed costs for all traffic for official territory and southern region and the northern lines computed costs for general traffic (all traffic except citrus fruits and fresh or green vegetables, not frozen, northbound) and citrus and vegetable traffic separately for official territory, eastern district, and southern region. The cost computation of each side furnished substantial verification of that of the other side. Further, positive verification was made by applying the unit costs in statement No. 2-58 to the service units by type of car. The assertion made by the northern lines that the southern lines omitted 70 percent of the cars in the traffic sample from their cost studies is not true of the latter's final cost presentation.

Our restatement is based on official territory (eastern district plus Pocahontas region) costs north of the breakpoints, for reasons previously discussed, and is at the fully distributed level,[5] as advocated by both groups, on all traffic. Apart from the adjustments rejected in appendix B, our restatement is based on the southern lines' cost computation, as applied to their traffic studies, which, we find, more reliably and accurately reflect the movement of the traffic in question. Incorporating the five adjustments advocated by the southern lines which we have found appropriate, our restatement is shown in the following table:

	Restated costs	
All traffic	*Official territory*	*Southern region*
Revenue as settled	$221,430,341	$274,656,425
Percent	44.64	55.36
Fully distributed costs— unadjusted	169,617,543	194,306,309
Percent	46.61	53.39

5. As found appropriate in *Louisville & N.R. Co. v. Southern Ry. Co.*, 319 I.C.C. 639, 660, sustained in *Carolina & N.W. Ry. Co. v. United States*, 230 F. Supp. 581 (W.D.N.C. 1964).

26

All traffic—continued	*Official territory*	*Southern territory*
Adjustments:		
Exclude platform cost	$—2,254,075	$—453,673
Way and thru train separation	—2,283,259	—3,595,230
Switching and terminal companies	—163,473	+1,039,610
Include short line (class II railroads) costs	—37,725	+529,347
Train tonnage—		
Pocahontas region	+867,319	0
Total adjustment (net)	—3,871,213	—2,479,946
Fully distributed costs—adjusted	$165,746,330	$191,826,363
Percent	46.35318	53.64682

As indicated, we have fully reviewed in appendix B and restated above the costs as presented by the parties. In addition, however, the southern lines urge that the evaluation of certain factors bearing upon costs establishes that their cost study overstates the costs of the northern lines relative to the costs in the South, all to the general effect that their showing of the northern lines' costs should be reduced by at least 5 percent. These factors include: (1) overstatement of line-haul costs, (2) costs of interchanges between northern and southern carriers, (3) differences in the timing of modernization programs in each territory, and (4) savings which would result from "necessary" elimination of alleged excess capacity and duplicate facilities. The only item to which they attach a cost figure relates to the equalization of gateway interchanges, amounting to $1.6 million. We have discussed this item in appendix B, pointing out our reasons why such an adjustment is not warranted. As to the remainder, they agree that a precise cost figure cannot be ascertained. We have fully considered these factors, and are of the opinion that the service unit costs as determined by the application of Rail Form A, as adjusted, adequately reflect the costs which are

attributable to the traffic at issue. Our overall appraisal of this evidence is reflected in our conclusions and findings.

Importance to the Public

Section 15(6) of the act also requires that we give due consideration to the importance to the public of the transportation services of the concerned carriers. No real issue exists between the contending railroad groups themselves in this respect. Each group is considered to be of equal importance to the public.

27

The prior phase of this proceeding was viewed primarily as a struggle between the railroads. In this reopened phase, however, certain interests representing public bodies adduced evidence in support of the southern lines. The Southern Governors' Conference[6] and the Southeastern Association of Railroad & Utilities Commissions[7] endeavored to show why the divisions of the northern lines should not be increased. Unlike the request of the southern lines, their requested finding is that equal factor divisions should be maintained. These interveners contend that a shift of divisions from the southern lines would result in higher rates on southern and interterritorial and intraterritorial traffic, and diminution of services, facilities, and equipment. Thus, they foresee the impairment of the ability of southern shippers to compete in distant markets and diversion to other modes of transportation, thereby impeding the economic growth of the South.

In their exceptions, the southern interveners urge that the examiners failed to give effect to the overriding demands of the public interest which, they say, require uniformity in these divisions. We recognize that the public

6. In this proceeding, composed of the Governors of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee.

7. Composed of State commissions and their members charged with the regulation of common carriers and other public utilities in the States named in footnote 6.

interest must be considered and the importance to the public of the transportation services of the railroads is not a sectional concept. We are required under the act to preserve an adequate national system of transportation, and must therefore consider the public interest of all concerned. Such a consideration, however, does not by any means require a uniformity of divisions, nor can we find an affirmative virtue in it on this record. *Cf. Western Trunklines* case, 225 F. Supp. at page 604. Moreover, as pointed out in *New England Divisions Case,* 261 U.S. 184, 191 (1923), section 15(6) was designed to help the weak "by preventing needed revenue from passing to prosperous connections." Thus, an adherence to uniformity as such, without a careful evaluation of the statutory criteria and the evidence of record, can hardly result in the fixing of just, reasonable, and equitable shares.

Relying on *New York v. United States,* 331 U.S. 284, 315 (1947), the interveners also take the position that natural disadvantages must be found in the North before we may increase the divisions of the northern rail-
28 roads. In essence, however, other factors being equal, cost differences generally are the product of, and reflect, the inherent advantages and disadvantages that go to make up the respective overall transportation conditions in the two territories. *Cf. Louisville & N. R. Co. v. Southern Ry. Co.,* 319 I.C.C. 639 at pages 646-47. Moreover, in the *New York* decision, a discriminatory class rate structure was found not justified by territorial conditions. No similar showing as to existing divisions has been demonstrated here by interveners. Indeed, the continued maintenance of divisions which, all other things being equal, do not reflect the relative costs of service would not suggest justice as between the parties. Such inequities being manifest here, we are of the opinion that divisions correcting them can result in no unlawful injury to the South.

In sum, we find that there are no differences in importance to the public attributable to the two contending groups of railroads.

DIVIDING POINTS AND DIVISIONS ON PARTICULAR MOVEMENTS

Dividing points.—In this reopened phase the northern lines again urge that the construction of divisions over fictional breakpoints rather than over actual points of interior interchange results in unjust inflation of southern revenues. They request a finding that the dividing points to and from which primary divisions shall apply are the points at which the traffic is interchanged between a northern and southern line.

This problem has been a difficult one ever since these general North-South divisions were first considered in docket No. 24160, the northern lines always contending that actual interchange points should govern, while the southern lines strenuously urged that the primary dividing points should be at the territorial border. In the original 1939 report in docket No. 24160 the Commission found for the northern lines, but reversed its initial determination in the report on reconsideration, 238 I.C.C. 149. Subsequent thereto, the interested lines in 1944 entered into what is known as the Roanoke Agreement as a compromise on traffic moving through the Ohio River gateways to points in central and Illinois territories. Details of this agreement, with which the northern lines are dissatisfied, are stated at page 528 of the first 1953 report, and need not be repeated here.

29 In the first 1953 report the Commission again agreed with the northern lines' contentions but upon reargument in the second 1953 report (289 I.C.C. 4) modified the finding, holding that it would not be desirable to require the use of points in Illinois and Indiana north of the Ohio River as primary dividing points.

The southern lines' traffic test, as stated, embraced a total of 967,554 cars. Of these, 86,843 or 9 percent were interchanged at interior Illinois-Indiana junctions, the most important of which were East St. Louis, 28,783 cars, Chicago, 19,441 cars, and Indianapolis, 12,599 cars.

The following tabulation shows the number of cars so handled by individual lines:

Railroad	Cars		
	Northbound	Southbound	Total
Illinois Central	30,838	15,463	46,301
Gulf, M. & O.	14,476	3,680	18,156
St. Louis-San Francisco	8,832	3,129	11,961
Southern	2,880	2,219	5,099
Louisville & Nashville	2,471	2,798	5,269
Missouri Pacific	—	57	57
Totals	59,497	27,346	86,843

A comparison of the total number of cars moving through primary dividing points with those moving through these points but not interchanged follows:

Dividing points	Total cars	Cars not interchanged	
		Number	Percent
Cairo, Metropolis Thebes-Gale	74,504	65,470	87.9
East St. Louis	55,767	11,005	19.7
Evansville	29,342	5,269	18.0
Louisville	90,538	5,099	5.6
	250,151	86,843	34.7

The total revenue on the 86,843 carloads was $49.6 million which was settled 63.9 percent south and 36.1 percent north. If the primary break were made over the actual points of interchange, the southern lines would have received 58.4 percent, and the northern lines 41.6 percent, reflecting a reduction in southern revenue of $2.7 million, averaging $32 per car. Some 28,136 cars, or 32.4
30 percent, were handled via joint routes that would have required new subdivisional arrangements.

The examiners recommended that the border dividing points be retained as at present. They were of the opinion that the record failed to show any changed conditions since 1953 favoring the northern lines as to the dividing point

issue. The northern lines except to this recommendation but are not joined therein by the Monon and the Chicago & Eastern Illinois, two of the carriers intimately concerned with the divisional break issue.

The northern lines contend that section 15(6) of the act requires that divisions be fixed as among the several carriers, which, they contend, means that the Commission may not recognize geographic areas or rate territories in establishing primary divisions. We do not agree with this view. This argument was rejected by the Supreme Court in *New England Divisions Case, supra,* shortly after the enactment of section 15(6) in 1920. We have administered the act accordingly over the years. See, e.g., *Atlantic Coast Line R. Co. v. Arcade & A. R. Corp.,* 194 I.C.C. 729 (1933), *Divisions of Freight Rates,* 253 I.C.C. 673 (1942).

The southern lines take the position that our order of July 28, 1959, reopening this proceeding, did not contemplate any reconsideration of the dividing point issue. The order was not so restricted. If we were to adopt this contention, our consideration of the divisions on Canadian-northern Maine traffic, which these carriers admit is at issue here for the first time, would likewise not be included in this reopened phase.

In the second 1953 report, 289 I.C.C. 4, it was stated at page 8:

> Upon further consideration we are of the opinion that it may be preferable from the standpoint of carrier competition and simplicity of accounting that the divisions for the service south of any given gateway be uniform and that upon all the facts before us it would not be desirable to require the use of points in Illinois and Indiana north of the Ohio River as primary dividing points. The prescribed divisions will therefore be made applicable only to and from existing primary dividing points.

The northern lines contend that circumstances and conditions have changed since 1953, but we find nothing convincing upon which to base a conclusion to reverse that made in the above-quoted portion of the second 1953 report. The examples given in 1953 as to competitive routes and carriers are much the same today as they were then. It
31 appears that these lines simply are endeavoring to have us reconsider the situation. But the positive virtues of the uniform treatment set forth above still obtain.

The northern lines also rely on the *Border Point* case, *Louisville & N. R. Co. v. Akron, C. & Y. R. Co.*, 309 I.C.C. 491 (1960), as an indication that the southern lines have advocated, and that we have accepted, the proposition that railroads assigned to the southern territory to the extent they operate in official territory are to be treated as southern carriers. However, that proceeding concerned traffic moving between primary dividing points or to and from stations on southern territory carriers which are located south of the primary dividing points, which traffic had not been included in the evidence when the Commission's 1953 reports and orders were entered. The *Border Point* decision merely prescribed the docket No. 29885 divisions on the border point traffic of the Louisville & Nashville and the Coast Line consistent with the divisions prescribed for the border point traffic of the northern lines. It did not include traffic of those two carriers north of primary dividing points.

All things considered, we conclude and find that the divisions prescribed herein should continue to be made applicable only to and from existing primary dividing points. *Cf. Official-Southwestern Divisions*, 289 I.C.C. 11, 16 (1953). Thus, railroads assigned to southern territory in their entirety for statistical purposes will continue to be treated as southern lines for that portion of the operations south of the territory border dividing points and to be treated in

accordance with geographical fact to the extent that they operate as northern lines north of the primary dividing points. Giving consideration to the revenues which will accrue to the contending groups as a result of this finding, together with the revenue division which our prescribed general basis of divisions produces, we are of the opinion that no unjust inflation of southern revenues is occasioned thereby. Further, here as in the second 1953 report, we express no opinion as to the fairness of the method of subdividing the northern primary divisions.

Divisions of rates to and from points in official territory on western lines.—Certain western trunklines requested that the divisions on this traffic which is interchanged by them directly with the southern lines, as well as that originating or terminating on southern lines with a northern line or lines participating in the haul, should be the same as are or may be prescribed herein for the northern lines. The examiners concluded that the evidence was inade-
32 quate to support findings with respect to traffic interchanged without northern lines' participation absent a showing of the present divisions on this traffic and the relative service performed by each group. They further concluded, however, that the divisional scale prescribed for the northern lines should also apply to traffic interchanged between the western trunklines and the southern lines in which there is participation by a northern line or lines. Such traffic is presently subject to the general prescribed basis and is embraced within the southern lines' traffic study. No exceptions were filed to the examiners' conclusions. While our findings call for cost based scales rather than the form prescribed by the examiners, we agree with their ultimate conclusions as to the treatment to be accorded in both situations.

Canadian-northern Maine traffic.—The southern lines' traffic study shows 2,955 cars (3 percent of the total) moved to or from Canadian points on combination rates made over

an international boundary point, 2,227 of which were northbound, and 728 southbound. A slight controversy exists as to the divisional basis applicable to this traffic, since two southern territory lines settled divisions on 245 southbound cars on the docket No. 24160 basis. The southern lines are now, in this reopened phase, for the first time asking us to avoid any similar controversy for the future by prescribing divisions on this traffic "that reflect its demonstrated characteristic, i.e., 'overhead' traffic for the official territory part of the haul." They urge that since the northern lines perform no terminal service thereon the northern factor should be adjusted to reflect the situation.

The northern lines oppose any special basis on Canadian traffic. They point out that these joint rates are the same as the domestic rates to and from the border points and, as such, contemplate two terminal services of which southern lines perform but one. Of the 2,955 cars involved, 1,324 cars moved through the Detroit gateway. Of this number, 609 moved in connection with the Chesapeake & Ohio, indicating that that road bears a heavy expense, in addition to that entailed by normal interchange in the Detroit-Windsor area, largely because of the international character of this traffic.

A similar situation exists with respect to traffic moving between the South and destinations in northern Maine on combination rates made over Brunswick or Lewiston, Maine. The joint revenue accruing south of these points is
33 divided on the presently prescribed general basis. Thus, the southern lines contend that the northern lines receive compensation for a terminal service which they do not perform. The southern study embraced 3,158 cars in this category, about 90 percent of which consisted of clay from Georgia origins to papermills in northern Maine, 80 percent thereof going to Maine Central points on combinations over Brunswick. On March 16, 1960, these clay rates were superseded by single-factor joint through rates

over protest of the Maine Central. Clay traffic to Bangor & Aroostook points remained on the combination basis.

The northern lines advance several reasons why the instant Maine traffic should not be excepted from the general basis of divisions. These include characteristics peculiar, in part, to New England territory, such as lower traffic density, higher level of costs, multiline hauls north of the gateways, and lower rates of return. These lines urge that the general basis of divisions is required to compensate them fully for the services they perform.

The Commission is required under section 15(6) of the act to consider "whether any particular participating carrier is an originating, intermediate or delivering line." It has frequently recognized the fact that intermediate carriers having no service to perform in originating or delivering shipments are entitled to a lesser proportion of joint rates for that reason. *Through Routes and Joint Rates,* 174 I.C.C. 477, 485; *Official-Southwestern Divisions,* 287 I.C.C. 553, 580; *Divisions of Rates, Official and Southern Territories,* 278 I.C.C. 89, 94.

The examiners recommended that the divisions on this traffic be determined by making the northern factors thereon 75 percent of the northern general factors recommended by them. The northern lines take exception to this conclusion but recognize that there may be some merit in establishing a special basis to govern these divisions. The facts establish that as to most of this traffic the northern lines perform purely intermediate service with no terminal service involved. These lines state that under the circumstances an equitable basis would result from the use of prorating factors 26 inte[illegible]rs less than the northern general factors. The 75-percent basis prescribed in *Divisions of Rates, Official and Southern Territories, supra,* and continued in our 1953 reports in this proceeding, applied only on grain and grain products moving on proportional and reshipping rates

and were specifically related to the unusual characteristics of that traffic. It was not intended that such divi-
34 sional basis should become a precedent of all overhead traffic. Rather, in light of the foregoing, our general discussion and conclusions, and the scales hereinafter prescribed, we are of the opinion and find that the intermediate scale set forth in our ultimate finding 3, modified so as to contain no allowance for terminal service, will be just, reasonable, and equitable for the future on Canadian-northern Maine traffic. Similar action was taken in *Official-Southwestern Divisions, supra.*

Grain and grain products.—In the 1953 reports we prescribed, as stated previously, a separate specific scale of divisions to apply to the joint proportional rates on grain and grain products from East St. Louis, Louisville and Cincinnati to points in southern territory reflecting northern factors 75 percent of the prescribed northern general factors. The evidence upon which that finding was based was principally that which was adduced at a further hearing in docket No. 24160 and made part of the record in the original phase of the instant proceeding by stipulation (287 I.C.C. 543). The examiners recommended that the northern factors covering this traffic should remain at 75 percent of the recommended northern general factors. The southern lines take exception to this conclusion on the ground that no evidence was here adduced dealing with this divisional situation. Under the circumstances, lacking such evidence, we may make no assumptions as to such traffic. The southern lines' exception must be sustained. Our ultimate findings prescribing lawful divisions will include this traffic so as to embrace all North-South traffic except that specifically excluded, and for convenient reference we will incorporate the prior finding as to grain and grain products.

Proposed Changes

The northern lines favor simple modification rather than complete revision of the present divisional scales, and

ask that we make such modifications therein as shall serve to redistribute the total revenue between the two groups with primary regard for their relative general levels of costs and relative revenue needs. They urge that because of their greater revenue need, the Commission should add 10 percentage points to the 25-percent increase that would be justified on the basis of relative costs alone, and thus prescribe, on general traffic, the present divisional factors for southern lines and the present factors increased by 35 percent for northern lines. On citrus and vegetable traffic their proposition is the same except that they ask
35 that their present factors be increased by only 15 percent. They estimate that the divisions thus proposed would increase their total revenue about $35 million annually, making the adjusted rates of return for 1959 for official territory lines 2.42 percent and for southern region lines 3.19 percent.

The northern lines ask that the divisions of the per-car rates on vegetables to New York be excluded from the general basis and a special provision be applied thereto so that the excess of $57 per car in the New York City rates over and above the rates to Jersey City shall continue to accrue to the delivering lines before prorating. No significant specific evidence was adduced in support of the sought exclusion as to the instant rates and movements. Also, the per-car rates here referred to were found unlawful and the unlawfulness was ordered removed in *Port of New York Authority v. Aberdeen & R. R. Co.*, 321 I.C.C. 738 (1964). The Commission's order therein was restrained, however, and the matter is now the subject of court litigation in the United States District Court for the Eastern District of Pennsylvania. In the circumstances, the sought provision as to such traffic does not appear appropriate. The relief sought is denied.

The northern lines also ask that we exclude the divisions of joint rates on liquid caustic soda and soda ash from Saltville, Va., to Kingsport and Port Rayon, Tenn., as to

which the existing order was vacated in response to mutual petition of the interested carriers. Again, since no evidence was offered dealing specifically with this segment of traffic, we are unable to grant such relief. Similarly, no evidence was adduced as to their request for exclusion of the divisions of joint rates on all trailer-on-flatcar traffic, nor was this request renewed in their exceptions. It is therefore denied.

The southern lines would abandon the present scales of prorating factors and substitute therefor scales constructed directly from the costs developed in their cost study which we have not accepted in its entirety, as shown in our restatement. They oppose the use of divisional scales derived from rate scales because, they contend, partly curvilinear and partly straight line rate of progression favors the short haul in the North. Omitting 50-mile block factors, except for the initial block, the scales proposed by the southern lines are shown below:

36

Distance	*Column 1 (South)*	*Column 2 (North)*	*Column 3 (North)*
50 miles	155	137	144
100 miles	214	194	204
200 miles	330	307	323
300 miles	447	421	443
400 miles	563	535	563
500 miles	680	648	682
600 miles	797	762	802
700 miles	913	875	921
800 miles	1030	989	1041
900 miles	1146	1102	1160
1,000 miles	1263	1216	1280
1,100 miles	1380	1330	1400
1,200 miles	1496	1443	1519
1,300 miles	1613	1557	1639
1,400 miles	1730	1670	1758
1,500 miles	1846	1784	1878
1,600 miles	1963	1897	1997

The scales in columns 1 and 3 are those developed directly from the southern cost study for the southern and northern portions of the hauls, respectively. Instead of using column 3 as northern factors, the southern lines would use 95 percent thereof as reflected in column 2. They contend that such an adjustment is required in the northern scale to correct the alleged relative overstatement of the cost for the northern hauls. We have declined to recognize this adjustment as valid in our discussion of the cost evidence. It will be noted that the factors in columns 1 and 3 become equal at 400 miles but that the 5-percent reduction keeps the column 2 northern factors below the column 1 southern factors throughout the proposal. Such computations are to the advantage of the southern lines who have the longer average hauls. On the average hauls of 522 short-line miles South and 372 North the southern proposal would produce divisions of 58 percent South and 42 percent North. Such proposal obviously would be unfair to the northern lines on a cost of service basis as shown in our restatement of costs.

Construction of the divisional scales.—The examiners recommended the prescription of the factor scale we prescribed in the first 1953 report, except that the northern scale should be increased uniformly by 10 percent. They refused to change the construction of the scales on the ground that the Commission in the prior phase of this case considered the southern lines' contention as to the unsoundness of the prescribed scale and declined to modify the scale in the second 1953 report, 289 I.C.C. 4.

37 On brief and again upon exceptions, the southern lines urge that the construction of the existing scale operates unfairly upon them since they have the longer average hauls. They contend that the scale contains certain defects: (1) an unexplained and excessive allowance for short hauls; (2) the progression of the scale unlawfully depresses the revenues of the long-haul carriers; (3) the

value of each 50-mile block reflects services not performed because of the application of the scale to the upper limit of the mileage blocks; and (4) the value of the initial mileage block is excessive to the extent of 37 integers.

The new evidence adduced upon further hearing demonstrates that the foregoing contentions of the southern lines have merit, and we so find. Under the circumstances, and in light of our subsequent conclusion to be guided by the relative costs in our general determination, we have accordingly revised the general divisional factors to reflect warranted adjustments of record. The resulting scales, set forth in columns 1, 2, and 6 of Appendix C, are constructed from factors based on the fully distributed costs and give due and adequate consideration to terminal, way train, through train, and interchange costs, as incurred by the respective lengths of haul, and the factor for each mileage block has been computed at the midpoint, or median, for each block. We have utilized 50-mile blocks as in the past and as again urged by both groups. The basis of these scales is set forth as follows:

	Column 1 Official territory	*Column 2 Southern region*	*Column 6 Official territory*
Terminal and border interchange (mills per hundredweight)	64.17	44.08	——
Interchange for bridge traffic (mills per hundredweight)	——	——	17.07
Way train (mills per hundredweight-mile)	0.78905	0.67720	——
Way train miles	11	27	——
Through train (mills per hundredweight-mile)	0.63584	0.57756	0.63584

The scales are computed in the following manner using the 201-250 mileage block and column 1 as an example.

Terminal			64.17
Way train	0.78905 x	11 miles	8.68
Through train	0.63584 x	214.5 miles	136.39
Midpoint		225.5 miles	209.24
250 mileage block factor on appendix C, column 1			209

38 *The 15-percent minimum.*—The examiners recommended that the 15-percent minimum be retained under the divisional scales suggested by them. On exceptions the southern lines contend that if a proper divisional scale is used to reflect the services performed in handling the traffic at issue, full credit for terminal service, way train service and through train service (including interchange services) is reflected in the scale itself and there is no need for a minimum division. We agree with the southern lines in this respect. The prorating factors which we prescribe herein give full credit for terminal costs, thus appropriately protecting the very-short-haul carriers which, for the most part, perform principally originating or terminating service. Unlike, the existing scale which is weighed in favor of the very short haul, the scale prescribed herein, reflecting as it does the cost and service involved, gives each type of haul its proper share, and, therefore, no special protection for short hauls is warranted. In any event, the aggregate amount of traffic which would not be accorded a division of at least 15 percent of the through revenue appears to be inconsequential.

Divisions of the Norfolk Southern and Certain Other Lines

In the first 1953 report, 287 I.C.C. at page 544, portions of the 1939 report were quoted to explain why in that earlier proceeding the divisions of the Norfolk Southern Railway Company, except on peaches, were not made subject to the prescribed basis in 1939. Principally, reference was made

to the loss occasioned by such basis and to the resulting increase in the financial burden of this railroad.

This line's condition was found considerably improved in the 1953 phase of this case. The carrier then asked for some small relief through increased divisions, in which request it was joined by the Atlantic and East Carolina Railway Company and the Beaufort and Morehead Railroad Company. After consideration of the evidence concerning these carriers, the Commission was unable to find that a special basis of divisions for them would be justified. One of the considerations which led to this conclusion was the improved financial condition of the Norfolk Southern, particularly when compared with rates of return of the northern lines generally and those of the Pennsylvania in particular, with which line it was presumed that the greater portion of traffic through Norfolk was interchanged.

Thereupon, these three respondents filed separate petitions seeking reconsideration. It was observed upon reargument (289 I.C.C. 4, 8) that the basis prescribed in the *original* 1953 report would cause these carriers to incur a proportionately greater reduction in revenue than the southern lines as a whole.

It was there stated:

> Upon further consideration we are in doubt whether the present record contains all the facts which should be currently considered in establishing a proper basis of divisions of joint rates between official territory and points on these lines.

Accordingly, the case was reopened for further hearing and the order as to these respondents was postponed pending the further hearing which was had in this reopened phase. Of the three carriers only the Norfolk Southern introduced evidence. No exception was taken to the examiners' conclusion that the divisions of the Atlantic & East

Carolina and the Beaufort & Morehead should be subject to the general basis prescribed. We affirm that conclusion.

The situation with respect to the Norfolk Southern requires separate detailed consideration. This line has in the past been classed as a weak line, having been awarded arbitraries in various instances. See *Southern Class Rate Investigation*, 100 I.C.C. 513, 128 I.C.C. 567. As noted in the first 1953 report, its condition had improved in years recent to that decision. Its main line extends from Norfolk, in a southwesterly direction, to Charlotte, N. C., 379 miles, with 210 miles of branch lines; 95 percent of its local mileage is in North Carolina, the remainder in Virginia. Its annual constructive year, later described, system freight revenues were $9,712,747, 34 percent, or $3,300,660 of which is involved here. For purpose of this case, the respondent has divided its traffic into three categories:

(1) Traffic in which the Norfolk Southern participates as an intermediate carrier moving between points in the South and points in official territory. The divisions on this overhead traffic are subject to the 1953 prescribed scales. During the constructive year revenue accruing to the Norfolk Southern in this category amounted to $879,069. No special basis of divisions on this traffic is requested, except that if a change is made in favor of the northern lines we are requested that this line's revenues as a whole not be diminished. Under the general basis of divisions prescribed in finding 2 herein we estimate that this revenue would be reduced by the 2.908-percent figure later indicated, or only $25,563. Revenue accruing here to the carrier is a subdivisional question and will not be made subject to a special basis.

(2) Traffic originating or terminating on the Atlantic & East Carolina and the Beaufort & Morehead railroads to and from points in official territory moving over the Norfolk Southern as an overhead or intermediate carrier. During the constructive year this category embraced the movement

of 1,655 cars, interchanged at Norfolk, only 60 cars of which were handled by the Beaufort & Morehead. It is estimated that Norfolk Southern's portion of the revenues would have been about $32,000 less annually if the 1953 prescribed basis had been applicable. The general basis of divisions in finding 2 herein would reduce the revenue by an estimated $47,079. All of the traffic in this category must be handled between New Bern, and Morehead City, N. C., or to and from points between Goldsboro, N. C., and New Bern by the Southern Railway. We find no circumstances which differentiate this traffic from that which originates or terminates on the Atlantic & East Carolina portion of the Southern Railway and is not interchanged with the Norfolk Southern. Revenue accruing to the latter in this category is again a matter of subdivisions and should not be made subject to a special basis.

(3) The third category, characterized as the most important, embraces that traffic which originates and terminates on the line of the Norfolk Southern and moves to or from points on lines of the northern railroads in official territory.

At page 545 of the first 1953 report it was stated:

> The divisions of rates to and from the Norfolk Southern are in an unsatisfactory state. To a large extent they are based on rate prorates running back for many years, as to which there is disagreement. The settlements of revenue apparently are determined by the line which collects the charges. It does not appear that the interested carriers have made any effort to adjust their differences, as we suggested in our 1939 report.

In this reopened phase the record shows that the divisional situation has not changed materially since the 1953 reports. Substantial evidence was adduced by the Norfolk Southern designed to support a finding that a definite

modernized basis of divisions be prescribed. As noted, however, it does not request an increase in its involved divisions, but asks only that the level of its revenue from this interterritorial traffic be preserved.

41 For the purpose of showing the characteristics of this category of traffic, this respondent submitted a traffic study covering all shipments of general traffic originated or terminated by it in the 2 months of November 1958 and March 1959, expanded to an annual basis by multiplying by six, and included separately all shipments of northbound fruits and vegetables for the year 1959. The general study, as expanded, covers what is referred to herein as the constructive year. The interterritorial traffic originated and terminated on the Norfolk Southern accounted for 15.1 percent of its total carloads, 12.6 percent of its total tonnage, and 23.4 percent of its total revenues, thus indicating that traffic in this category is relatively important to it. This general traffic study covers 17,292 cars, 638,394 tons, and total revenue of $5,588,844, of which the Norfolk Southern received $2,271,984 (including $10,284 in arbitraries) or almost 40 percent. The northern lines received about $3 million, almost 54 percent. In addition, there were 432 cars, 8,501 tons, of fruit and vegetables moved in 1959, all of which moved northbound via Norfolk; of the total fruit and vegetable revenue, $130,427, the Norfolk Southern also received about 40 percent. About 54.7 percent of the total cars in the traffic study were northbound, accounting for 50.8 percent of the total revenue. Southbound traffic generally consisted of higher rated commodities. By far the most important gateway on the total traffic was Norfolk through which moved 13,488 cars, 76.1 percent of the total. Second was Richmond, 1,590 cars, and in third place was Lynchburg, Va., 1,422 cars, other gateways sharing in the remaining traffic. Of the total 13,488-car traffic through the Norfolk gateway, the southern lines received about 43.4 percent of the total revenue or

$1,987,902. This latter figure excludes arbitraries of $7,488 accruing to the Norfolk Southern, but includes revenue of $1,326 for southern lines other than the Norfolk Southern, thus leaving for the latter revenues amounting to $1,986,576. However, on the 4,236 cars this respondent originated and terminated through other gateways, the southern lines received about 57.34 percent of the total revenue or $647,034. This latter figure again excludes arbitraries of $2,379 accruing to the Norfolk Southern, but includes revenues of $320,052, or almost half, for southern lines other than the Norfolk Southern, the latter carrier thus receiving $326,982, or only slightly more than half of the total. Generally, intermediate southern lines participate in the movements via gateways other than Norfolk and, therefore, the situation presents a question of subdivisions.

42 The study indicates that if this traffic (including fruits and vegetables) during the constructive year had been subject to the 1953 prescribed basis, the revenue accruing to the Norfolk Southern would have been $450,362 less than that "as settled." Our analysis of the record indicates that the revenue accruing to the Norfolk Southern from this traffic, if it had been determined on the general basis provided in finding 2 herein, would have been $1,517,242, or $796,316 less than that "as settled." As thus computed, the reduction on traffic through the Norfolk gateway would have amounted to $751,548 as contrasted to only $44,768 less than the revenue as settled via the other gateways. The line's net railway operating income in 1958 amounted to $267,700, and in 1959, $434,000. It can readily be seen that substantial deficits would have occurred in connection with the loss of revenue on originating and terminating traffic especially via the Norfolk gateway. The evidence demonstrates that the line is in pressing need of sufficient revenues to improve its physical plant and provide additional rolling equipment. It has paid no dividends since 1957.

Based on short-line ton-mile distances, the weighted average haul on all originated or terminated traffic during the constructive year was 162 miles south and 365 north via all gateways. On traffic moved only through Norfolk (13,488 cars) the averages were 136.6 miles south and 431.3 miles north. On the movement of the 432 cars of fruits and vegetables the averages were 55.2 miles south and 704.2 miles north which tended to reduce Norfolk Southern's average haul shown in the overall figures.

As stated, 76.1 percent of the cars in the traffic test were interchanged at Norfolk. This accounted for 85.9 percent of its total standard line revenue. At Norfolk it interchanges with the Chesapeake & Ohio, Norfolk & Western,[8] and the Pennsylvania. Various statistics of record show that the Pocahontas lines (C. & O. and N. & W.) participate in the traffic to a greater extent than the Pennsylvania. During the constructive year the 13,488 cars were interchanged at Norfolk as follows:

43

	Cars	*Percent*
Chesapeake & Ohio	3,412	25.30
Norfolk & Western	6,503	48.21
Total Pocahontas lines	9,915	73.51
Pennsylvania	3,573	26.49
Total	13,488	100.00

Of the cars shown above, 5,281 originated or terminated locally on the lines of the Chesapeake & Ohio and Norfolk & Western, and the remainder on the Pennsylvania. On a revenue basis the Pocahontas lines received 52.71 percent of the total (C. & O. 17.70 percent, N. & W. 34.39 percent, R.F. & P. 0.62 percent), the Pennsylvania 24.75 percent,

8. Data herein with reference to the Norfolk & Western, where applicable, include the Virginian Railway. These railroads merged December 1, 1959.

and all other northern lines 22.54 percent. The traffic moved by the Pennsylvania involves a marine service transfer across Chesapeake Bay at an expense of $35 per car.

Rates of return for the southern region and the eastern district plus the Pocahontas region, 1952 to 1959, are shown earlier in this report. A comparison of average returns 1946-50 of the latter with the Norfolk Southern and the Pennsylvania are shown at page 546 of the first 1953 report. Rates of return, 1952 to 1959, of the eastern district (excluding the Pocahontas region), the Norfolk Southern, and the three connecting lines at Norfolk based on net investment are shown below:

Percent return

Year	*Eastern district excluding Pocahontas region*	*Norfolk Southern*	*Chesapeake & Ohio*	*Norfolk & Western*	*Pennsylvania*
1952 ..	3.43	2.33	6.65	5.43	2.98
1953 ..	3.68	3.39	6.90	5.11	2.98
1954 ..	2.48	1.88	6.16	4.76	1.96
1955 ..	3.64	2.81	7.93	6.94	2.87
1956 ..	3.33	2.81	8.20	7.19	2.76
1957 ..	2.43	2.47	7.88	7.12	1.80
1958 ..	1.13	1.01	6.68	6.63	0.49
1959 ..	1.43	1.50	5.82	7.56	1.26

The northern lines assert that the foregoing comparisons of the eastern district, the Norfolk Southern, and the Pennsylvania are persuasive of the propriety, so far as primary divisions are concerned, of treating the Norfolk Southern in the same manner as other southern lines, leaving it to the respective groups to make any necessary special
44 provisions for the Norfolk Southern through the medium of subdivisional arrangements.

The Norfolk Southern urges that it would be absurd to diminish its revenue when the major beneficiaries would be the Pocahontas lines whose rates of return are rela-

tively high. It proposes that on traffic originated or terminated by it, interchanged at Norfolk, its prorating factors be made 149 percent of the factors presently prescribed for the northern lines, and on traffic moving through other gateways, 125 percent thereof.

The examiners recommended that the divisions on traffic originating or terminating on the Norfolk Southern be determined by the use of the equal-factor basis prescribed for general use on North-South traffic in the first 1953 report. This respondent takes exception to the examiners' report on the principal grounds that the recommended basis would place it in serious financial straits and would be confiscatory. It is supported on oral argument and exceptions by the southern interveners, including the North Carolina Utilities Commission which represents the interests of the State in which the principal operations of this respondent occur.

Respondent originates and terminates traffic of significant importance to itself, other carriers, and the shipping public. Despite its somewhat improved present day status of which we are officially aware, the record demonstrates that it can ill afford the loss of the involved revenue accruing especially on such traffic via the Norfolk gateway. It is apparent that if the Noroflk Southern's divisions on this latter traffic were determined on the general basis prescribed in finding 2 herein, it would be consigned to a deficit position so serious as to impair the rendering of adequate and continuous service to the public. We so find. Moreover, the southern lines' study excluded Norfolk Southern traffic from its scope. It is clear from the record, therefore, that the basis of divisions prescribed in finding 2 herein, derived from the southern study, would have an unjust and unwarranted impact on the Norfolk Southern to a degree not permitted under the *Orient* and *Western Trunklines* holdings. Our finding 4 herein will have the result of retaining for the Norfolk Southern a percentage

of revenue substantially the same as the present 43.4 percent received by it on the traffic through the Norfolk gateway. This will be accomplished by an increase of 108 percent in the factors of column 2 in appendix C. We have, therefore, divided the revenue on shipments originating on the Norfolk Southern moving via the Norfolk gateway on the basis of the cost progression, giving this respondent approximately the same total revenue it now enjoys on the traffic by means of the construction of column 5 in appendix C. We find that the aforementioned scale will result in just and reasonable divisions in the special situation of record with respect to the Norfolk Southern.[9] As noted, this respondent would be deprived of some revenue to the extent that the general basis prescribed would apply to other movements in which it participates with other southern lines. However, no justification for special treatment was presented and relief would involve principally a question of subdivisions, a matter not at issue here. On the whole, the Norfolk Southern, as compared with the other southern lines, would remain in the same relative position as now obtains. All other traffic of the Norfolk Southern will be subject to the general basis of divisions herein prescribed between the northern and southern lines.

One additional matter requires consideration as to the Norfolk Southern. Under a permissive order of the Commission in *Pooling of Refrigeration Earnings,* 258 I.C.C. 24, effective January 1, 1942, the proprietary lines of the Fruit Growers Express Company were allowed to enter into an arrangement whereby the net loss or gain realized in furnishing protective service could be pooled and at the close of the year such net loss or gain be distributed be-

9. As a matter of practicable scale construction, other southern lines will be subject to this same scale on Norfolk gateway traffic originating or terminating on the Norfolk Southern. However, their participation therein is shown to be relatively nil. Thus, any revenues accruing to them thereunder would be negligible.

tween the participating proprietary lines on the basis of loaded car miles handled by such lines. Members of the pooling arrangement were the major carriers in the South and certain eastern carriers that terminated perishable traffic. The Norfolk Southern joined about May 1, 1945. However, on and since April 1, 1959, several of the principal official territory lines, including the Pennsylvania, Chesapeake & Ohio, Norfolk & Western, and Baltimore & Ohio, have withdrawn, so that now only the Richmond, Fredericksburg & Potomac is still a member. As a result, the Norfolk Southern estimates it is losing an average of $49 on each car of originated fruits and vegetables given protective service. It requests that the prorating factor prescribed for it on its originated and terminated traffic interchanged at Norfolk be an additional 4 percentage points higher as a temporary measure until the pooling situation is adjusted. It contends that the Commission clearly recognized the pooling arrangement as an equitable solution of the divisional problem and that the withdrawal of the northern lines from that arrangement places an unjust divisional burden on it.

46

To give effect to the Norfolk Southern's position in this regard and on the limited evidence adduced, as pertinent, would penalize the carriers for withdrawing, despite the permissive aspect of the order. In essence, it would appear that the Norfolk Southern challenges the reasonableness of the level of the charges for protective refrigeration service. That issue is beyond the scope of the instant proceeding. In sum, the foregoing relief sought by the Norfolk Southern is not warranted.

At the time of the hearings herein, points on the line of The Atlantic and Danville Railway Company were generally understood to be in southern territory. As stated earlier, the divisions of joint interterritorial rates between points on the lines of this carrier west of Suffolk, Va., and points on the lines of respondents in official territory are

in issue in this reopened phase. The examiners recommended that the divisions from and to such points be those prescribed for other southern lines generally, to which no exception was filed. However, this carrier has been acquired by, and is now known as, the Norfolk, Franklin and Danville Railway Company, which in turn is under the control of the Norfolk & Western. See *Norfolk & W. Ry. Co.—Control—Norfolk. F. & D. Ry. Co.*, 320 I.C.C. 407. It is now classified in the Pocahontas region for statistical purposes. Our prior definition of northern and southern lines will be amended so as to give proper effect to the examiners' conclusion which we affirm.

The Georgia & Florida Railroad (Alfred W. Jones, receiver) made a presentation in its own behalf. We affirm the examiners' conclusion, to which no exception was taken, that this carrier is not entitled to a special basis of divisions. It has since been purchased by the Georgia & Florida Railway Company which in turn is under control of three subsidiaries of the Southern Railway System. See *Georgia & F. Ry. Co.—Acquisition—Georgia & F.R.*, 317 I.C.C. 745.

The New Haven has pointed to a general need of additional revenues in order to provide funds for maintenance, for capital improvements, and to make some return to its stockholders. We can find no basis here for according it any greater relief than that set forth in the general
47 basis of divisions prescribed hereinafter. Unlike the Norfolk Southern, it participates only to a limited extent in the traffic at issue.

General Discussion and Conclusions

Section 15(6) of the act provides in part as follows:

> Whenever, after full hearing upon complaint or upon its own initiative, the Commission is of opinion that the divisions of joint rates * * * applicable to the transportation of * * * property, are or will be unjust,

> unreasonable, inequitable, or unduly preferential or prejudicial as between carriers parties thereto * * * the Commission shall by order prescribe the just, reasonable, and equitable divisions thereof to be received by the several carriers * * *.

In its determination of lawful divisions, the Commission is directed by the second sentence of section 15(6) as follows:

> In so prescribing and determining the divisions of joint rates, fares and charges, the Commission shall give due consideration, among other things, to the efficiency with which the carriers concerned are operated, the amount of revenue required to pay their respective operating expenses, taxes, and a fair return on their railway property held for and used in the service of transportation, and the importance to the public of the transportation services of such carriers; and also whether any particular participating carrier is an originating, intermediate, or delivering line, and any other fact or circumstance which would ordinarily, without regard to the mileage haul, entitle one carrier to a greater or less proportion than another carrier of the joint rate, fare or charge.

In commenting upon the importance to be given the various factors, the district court in *Boston & Maine R. v. United States,* 208 F. Supp. 661 (D. Mass. 1962), *affirmed per curiam,* 371 U.S. 26, stated at page 675:

> "Due consideration" is not the equivalent of "primary consideration." The importance to be given any of the factors enumerated in the statute must necessarily depend upon the case under consideration. The evaluation of the importance of the various factors in any given case is peculiarly the function of the Commission.

In one of the first decisions involving these provisions, *New England Divisions,* 66 I.C.C. 196, the Commission

stated at page 199 "that the relative amount and cost under economical and efficient management of the service
48 rendered is a prime factor in determining the fair and equitable share of joint revenue which each carrier shall receive." In the 1939 report the cost element was given weight upon a showing that from 1932 to 1936 the cost per revenue ton-mile in the South was about 16 percent higher than that in the North. At page 525 of the first 1953 report, as previously referred to, it was stated that the record then showed that "for more than a decade the southern railroads have not labored under a disadvantage of operating costs generally higher than those of the northern lines."

As stated earlier, both groups rely heavily upon relative costs of service as a determining factor in this reopened phase. The northern lines say:

> It is beyond dispute that the power of the Commission to prescribe divisions of joint rates rests upon Section 15(6) of the Act as that provision has been construed by the Commission itself and by the Courts. Those interpretations make it abundantly clear that relative service costs are a primary consideration and that the Commission must, in addition, weigh the relative financial needs of the carriers involved in the light of the public interest. It is the position of Eastern lines that the Commission should, first, undertake to fairly assess the relative service cost levels of the two groups of carriers, parties to the involved rates, and should thereafter adjust its determination made upon the basis of such relative costs to reflect any greater financial need on the part of one of the groups.

The southern lines' emphasis on cost-of-service basis is reflected in their proposed integer scales which, as indicated heretofore, are directly related to the showing of their cost study.

Our restatement of the costs, which are reasonably accurate and reliable for purposes of determining the relative contribution by the groups on a cost-of-service basis, shows that the cost level in 1956, the year both groups used in the final cost analysis, is somewhat higher in the North than in the South for like services. A consideration of all factors indicates that this situation will most likely continue in the immediate future.

Both groups also rely upon revenue needs in claiming that they should have a greater share of the joint revenue than the present divisions accord them. The northern lines take exception to the examiners' recommendation which would increase the northern divisions, on the ground that the proposed increase is not large enough. On the other hand, the southern lines contend that the examiners erred in failing to find that the needs of the southern railroads
49 for additional revenues are greater than those of the railroads in the North.

In every divisions case evidence relating to revenue need is material because section 15(6) requires that "due consideration" be given, "among other things" to "the amount of revenues required to pay their respective operating expenses, taxes, and a fair return on their railway property held for and used in the service of transportation." We are thereby authorized "to take into account and give due weight to revenues from all transportation service, the operating expenses and taxes chargeable to the same and the amounts available as compensation for the use of all carrier property," as well as "the revenues, expenses, taxes and returns attributable to the service covered by the divisions under consideration." *Baltimore & O. R. Co. v. United States,* 298 U.S. 349, 360, 370 (1936). We are free to give such evidence the weight which the particular circumstances appear to justify.

In our determination herein we have considered evidence relating to the cost and other factors concerning the

public interest in maintaining all essential parts of the transportation system. Neither the history of these divisions, the general economic trends, nor any other factor presented here offers a concrete basis on which to find that either group is entitled to a share of the joint rates larger than that accruing under the divisions hereinafter prescribed on the basis of relative costs. In essence, the basic position of the northern lines is that their revenue needs are greater since the southern lines' average rates of return are somewhat higher. However, our prescription of divisions based on relative costs includes allowances for overhead and return, and in our judgment reflects a due proportion of the burden of maintaining the financial integrity and credit of the carriers involved. *Cf. New England Divisions*, 66 I.C.C. 196, 199. Accordingly, we see no justification at this time for adding any special increment favoring one group of carriers over the other. We find that no affirmative reasons appear in this record which would warrant any adjustment of the divisions in question over and above the relative costs of service, either on the grounds of greater revenue needs or otherwise.

The question of prescribing equitable divisions involves the making of practical judgments rather than the solving of a problem with mathematical certainty. See *Boston & Maine R. v. United States, supra.* As we have indicated, a careful evaluation of the factors, other than costs,
50 which we must consider under section 15(6) does not disclose that they require that one group be accorded relatively higher divisions of the joint rates than the other; in other words, there is no convincing evidence of record favoring one group over the other. However, weighing the cost evidence of record in the same balance and similarly considering it, without particular solicitude, we are of the opinion and find that it affords a reasonable basis for the exercise of a practical judgment. Stated in another manner, everything else being substantially equal, the relative costs of the parties reflecting their respective opera-

tions as to this traffic can properly serve here as a guide for the determination of just, reasonable, and equitable divisions. *Cf. Louisville & N. R. Co. v. Southern Ry. Co.*, 319 I.C.C. 639, at pages 657-658.

We have heretofore noted that the revenues in 1956 for the northern lines from the traffic at issue were but 6 percent of their total freight revenues, while for the southern lines the respective percentage was 21.4. In that year the northern lines received 44.64 percent of the revenue while incurring 46.35318 percent of the fully distributed costs. It is clear that an adjustment in the divisions is required to compensate the respective groups according to their expenditures in the joint effort of handling this interterritorial traffic. To the extent that the present divisions do not meet this test, they are unjust, unreasonable, and inequitable. The scales which we have prescribed in columns 1, 2, and 6 of appendix C herein are based on the fully distributed costs and divide the revenue in the same proportion to those costs. Based on the 1956 traffic study this will increase the revenue divisions of the northern lines with a corresponding decrease in those of the southern lines as follows:

Item	*North*	*South*	*Total*
Revenue as settled [1] ...	$221,370,940	$273,350,121	$494,721,061
Percentage of costs	46.35318	53.64682	100.00000
Proposed revenue [1] .... division	$229,318,944	$265,402,117	$494,721,061
Difference	$7,948,004	$7,948,004	—

1. Omits arbitraries of $59,401 in the North and $1,306,304 in the South.

The foregoing reflects a 3.590-percent increase in revenue, as settled in the North, and a 2.908-percent decrease in the South. In our opinion, the results achieved through the application of the divisional mileage scales here prescribed will for the future be just, reasonable, and equitable, and we so find. However, as in *Louisville*

51

& N. R. Co. v. Southern Ry. Co., 319 I.C.C. 639, 661, the parties should be permitted to negotiate and agree upon any other modified scales, devised on the same basis, but with different mileage blocks and factors or pursuant to any other method they may deem appropriate. In the event that they fail to reach agreement prior to the effective date of the order herein, the scales set forth in appendix C hereto are prescribed to apply thereafter. The conclusions and subsidiary findings hereinbefore made are reflected in our ultimate findings.

Ultimate Findings

Upon further hearing, we find:

1. That the present primary divisions of joint all-rail class and commodity rates (except those on traffic listed in appendix A) between official and southern territories are unjust, unreasonable, and inequitable.

2. That, except as hereinafter provided, just, reasonable, and equitable primary divisions of the rates referred to in finding 1 (including aggregate of intermediate rates which automatically displace single-factor joint rates), in which northern and southern lines [10] participate, should be determined by use of the prorating factors set forth in appendix C in computing percentages expressed as integers, the factor for the northern line or lines being that shown in column 1 for the short-line distance north of the dividing point and the factor for the southern line or lines being that shown in column 2 for the short-line distance south of the dividing point.

3. That just, reasonable, and equitable divisions of the joint combination rates on Canadian and northern Maine traffic to and from points in southern territory should be determined in the same manner as specified in finding 2, except that the factor for the northern line or lines should be that shown in column 6 of appendix C for the short-line

10. As defined in appendix C.

distance north of the dividing point and the factor for the southern line or lines should be that shown in column 2 of appendix C for the short-line distance south of the dividing point.

4. That just, reasonable, and equitable primary divisions of the rates on traffic originating or terminating on the lines of the Norfolk Southern Railway Company,
52 and moving to or from points in official territory, via Norfolk, should be determined by the use of the prorating factors set forth in appendix C in computing percentages expressed as integers, the factor for the northern line or lines being that shown in column 1 for the short-line distance north of the dividing point and the factor for the southern line or lines being that shown in column 5 for the short-line distance south of the dividing point. All other primary divisions of the Norfolk Southern shall be on the basis set forth in finding 2 herein.

5. That the evidence is not sufficient to support conclusions directed to the unreasonableness of the present divisions of the joint rates published between points on southern lines, on the one hand, and points on western lines in official territory, on the other hand, where a northern line does not participate in the movement north of the dividing point, and we find the present divisions not shown to be unjust, unreasonable, inequitable, or unduly preferential or prejudicial.

We affirm our prior finding (287 I.C.C. 547) that just, reasonable, and equitable divisions of joint proportional or reshipping rates on grain and grain products from East St. Louis, Louisville, and Cincinnati to points in southern territory should be determined in the same manner as specified in finding 2, except that the factor for the northern line or lines should be that shown in column 4 of appendix C for the short-line distance north of the dividing point and the factor for the southern line or lines should be that

shown in column 3 of appendix C for the short-line distance south of the dividing point.

We affirm our prior finding (289 I.C.C. 4, 8) that the dividing points to and from which the primary divisions shall apply are the present dividing points.

The prescribed primary divisions shall not be subject to a specific minimum. In disposing of fractions of 1 percent the odd 1 percent should be added to the percentage which contains the larger decimal, or if the percentages contain equal decimals 1 percent should be added to the smaller percentage.

Before the divisions herein prescribed are applied, differentials or arbitraries which are included in the joint rates so as to cause them to exceed standard rates, for hauls in either official or southern territories, whether for short or weak lines or otherwise, shall be deducted before prorating and added to the share of the carrier or carriers in the territory in which the differentials apply, pro-
53 vided, however, that in respect of rates on citrus fruit from Florida to official territory which include an arbitrary one percentage point shall be deducted from the northern division and added to the southern division in lieu of the specific apportionment of the arbitrary.

Our findings are without prejudice to the substitution of modified scales agreed upon by the parties in accordance with the discussion above.

An appropriate order will be entered.

COMMISSIONER MURPHY, dissenting in part:

In prescribing divisions we are required to divide earnings under joint rates according to what is fair and reasonable as between the parties. One of the main criteria used to make such a determination is the relative amount and cost of service performed by each of the several

carriers participating in the movement of the *specific* traffic involved from which this revenue is derived. The report of the majority purports to use as a basis for adjusting divisions the relative costs of service of the two groups of carriers, but in many instances territorial average costs are used which do not fairly measure the relative costs of handling the Official-Southern traffic here at issue. The record shows that the revenue obtained by the territory railroads from the traffic at issue constitutes only 6 percent of their total freight revenues. However, the average statistics used in arriving at the costs utilized by the majority in the report represent 100 percent of the traffic of the official lines. As a result, many of the cost figures have little or no relation to the movement of the traffic involved.

Although a number of adjustments in the Rail Form A statistics were made in the report, other necessary and important adjustments which would truly reflect the cost of moving the traffic involved were rejected or ignored. Consequently, costs for the service performed by the official lines in handling the traffic at issue are overstated. In *Louisville & N. R. Co. v. Akron, C. & Y. R. Co.*, 309 I.C.C. 491, 509, also known as the *Border Points Division* case, the Commission rejected the use of unadjusted Rail Form A costs, stating: "* * * the only comparable cost data for the complainants and the defendants are on the basis of territorial or systemwide averages, which are not determinative of the costs of these particular movements." The Commission therein did accept, however, specific costs supplied by complainants and complainants' adjust-
54 ments in territorywide average costs submitted by defendants. This finding by the Commission was sustained on judicial review, *Boston & Maine R. v. United States*, 208 F. Supp. 661 (D. Mass. 1962), *affirmed per curiam*, 371 U.S. 26.

Included in the cost computations for the official lines are suburban service deficits which are peculiar only to

the large metropolitan areas found in official territory. These deficits have no relation to intercity passenger deficits which normally are considered as part of the cost of providing freight services in that such passenger deficits are for the most part attributable to the apportioned costs of common facilities which must be incurred in any event to provide freight service. Almost all the expenses incurred in providing suburban passenger service have nothing to do with the costs of handling the Official-Southern traffic at issue in this proceeding. This service is provided over lines especially constructed and maintained for that sole purpose with equipment and facilities that have no other use whatever. It is unreasonable to require the southern lines and their shippers to defray a part of the costs of suburban passenger service in official territory cities so that the residents of the suburbs of those cities can travel at fares that do not even cover costs. This burden should be borne by the commuters who benefit thereby and the communities involved.

The higher than average empty return ratios used for cars moving over the official lines is another instance where true costs have not been used. The official lines handle approximately 800,000 carloads of automobile parts annually which originate in the Detroit, Mich., area and are destined to assembly plants in various parts of the country, including New Jersey, California, and Georgia. Many of these cars are fitted with special devices to protect the automobile parts in transit. Because these cars carrying parts contain special devices and are assigned to particular plants manufacturing such parts in official territory, they normally experience an empty return movement which is, for all practical purposes, 100 percent. No adjustment is made in the cost data to cover the higher empty return costs of this type of equipment. Territorial average boxcar empty return ratios, as used in the report, overstate the costs of the official railroads when applied to Official-Southern traffic.

The improper counting of a car interchanged instead of terminated by the official lines affects the weighting of that car in computing switching costs. The official
55 lines report a large volume of coal and ore terminated at port dumping facilities for loading onto boats as cars interchanged, while the southern lines report a large volume of phosphate rock hauled to ports for loading onto boats as cars terminated. These cars receive analogous services and should be treated as such. In both these instances the lading from the car is removed and the empty car is returned to the delivering carriers. The erroneous counting of cars terminated as cars interchanged on the official lines produces higher unit costs for official territory than for southern territory, both for origin and destination switching and for interchange switching.

If the above valid adjustments were to be made in the restated costs the difference between the relative costs of service of both parties would not be as great. In my judgment the amount of increase in divisions awarded the official lines by the majority is unwarranted.

Appendix A

Divisions of joint interterritorial rates prescribed herein do not apply on the following traffic:

1. Coal and coke made from coal, by common consent of the parties.

2. Trailer-on-flatcar traffic moving entirely over the lines of the A.C.L., B. & O., B. & M., F.E.C., N.Y.C., N.Y.N.H.&H., P.R.R., Reading, R.F. & P., and S.A.L., by stipulation at hearing.

3. Trailer-on-flatcar traffic via Potomac Yard, Va., from and to points on the Southern Railway (including its system lines as specified in the stipulation) and points on B. & O., B. & M., C.R.R.N.J., D. & H., L.I.R.R., N.Y.C.,

N.Y.N.H.&H., P.R.R., and Reading, by stipulation dated November 13, 1961.

4. Border point traffic embraced in docket No. 32055 (309 I.C.C. 491) by stipulation.

APPENDIX B

Southern lines' specific cost adjustments

a. Way and through train separation.—The Form A procedure provides for costing out traffic at either average train costs or a combination of way train and through train costs. Although the northern lines used average train costs in their study on the theory that it was adequate for overall territorial cost comparisons, they have no objection to the more refined procedure of using way and through train costs. This has the effect of giving slightly lower costs at the longer distances and higher costs at the shorter distances, and reduces the proportion of costs of the southern lines by 0.13 percentage point. We approve this adjustment.

b. Platform costs.—The southern lines excluded platform costs from their study of the costs of originating and terminating official-southern traffic. This brought about an increase of their proportion of the costs by 0.28 percentage point or in revenues about $1,389,000. This exclusion was based upon the conclusion that whenever a separate tariff charge was made for carrier loading or unloading, platform costs should be excluded. They examined 19 cars out of a 130,353-car sample of the involved traffic (967,554 cars), and contend that for all practical purposes none of the involved traffic received lighterage or any other service which would include platform handling as a part of the service under the line-haul rates being divided.

56

The northern lines took the same 19-car sample and showed that 11 originated on the eastern lines, 8 of which

were from Manhattan and 2 from Brooklyn, all 10 of which required either float or lighterage service and platform service. One car originated in New Jersey which was not involved in the issue of platform service. Of the eight cars destined to eastern carriers in the New York area, only two were actually delivered to Manhattan, one to Long Island City, and one to Brooklyn, the four likewise requiring harbor service. Three cars were destined and delivered to New Jersey points, and therefore did not require harbor service. The one remaining car was shown for diversion at Potomac Yard, but then no destination was shown, and there was no possibility of knowing what final service was required.

It is evident from the facts that platform service is incurred by some of the shipments of official-southern traffic. However, as noted, the southern lines excluded platform costs in each territory, contending that such costs are no longer part of the service covered by the line-haul rates but are covered by a separate charge collected and retained by the northern lines. The southern lines excluded their own platform costs in the interest of relative equality between the territories.

In prior years platform service was considered a part of the line-haul service covered by the through rate, and, accordingly, platform costs less the incidental revenues were correctly included in computing the cost for the line-haul service. Thereafter, however, the conditions at the unloading facilities changed. Whereas prior conditions necessitated that shippers be denied access to the cars for unloading at piers, the new conditions permitted shippers access to the cars. As a result, unloading was no longer a part of the line-haul service provided by the railroad but became the responsibility of the shippers, as it is at other destinations in all territories. The Commission took cognizance of these changed circumstances in *Increased Freight Rates, 1958*, 304 I.C.C. 289, 375, when it indicated:

The line-haul rates on this traffic are designed to cover only normal delivery and do not include compensation for the loading and unloading services, the line-haul rates on the perishable traffic being generally below out-of-pocket costs.

For the purpose of comparing relative territorial cost levels the inclusion of both the incidental revenue and the costs of platform service are correctly shown in Rail Form A; however, where the purpose is to measure the cost of services performed under the line-haul rates to be divided, it is correct to exclude platform service which is not within the scope of the rates. Our restatement reflects this view.

57 *c. Switching and terminal companies.*—An understanding of the switching charges at Chicago and St. Louis requires a consideration of Rail Form A procedures for switching and terminal companies. The Rail Form A procedures separate the costs for such companies as between the costs and services for intraterminal and other operations not chargeable to the origination or termination of cars for the account of class I roads (25 percent) and the costs and services which are so chargeable to class I roads (75 percent). The latter costs and services are then associated with class I line-haul railroads in whose statistics the cars originated or terminated are reported. This procedure is not questioned, but in dividing the switching and terminal company costs among groups of carriers the following complication arises.

The percentage separation of the (75 percent) costs of switching and terminal companies which are located on territorial borders is illustrated below:

	Eastern district	*Western district*	*Southern region*	*Total*
Chicago, Ill.	50	50	—	100
St. Louis, Mo.; and East St. Louis, Ill.	50	50	—	100
New Orleans, La.	—	50	50	100
Louisville, Ky.	50	—	50	100

The southern lines consider the allocations at New Orleans and Louisville to be reasonable since carriers assigned to other territories do not reach those points. However, two southern region carriers reach Chicago and four reach St. Louis or East St. Louis. The southern lines maintain that since the reported statistics assign to the southern region carriers the cars switched for their accounts by the switching and terminal companies at those points, the portion of the switching and terminal companies' expenses which are associated with switching such cars must be allocated to the southern region carriers in order to determine the actual unit costs. To accomplish this end, the southern lines determined the proportion of the total transportation revenues of each switching and terminal company at the above-mentioned cities that was paid by the southern region carriers. They then assigned the relative proportion of switching and terminal company cost to the southern region.

The northern lines maintain a different viewpoint toward these switching points at the Chicago and St. Louis areas. They contend that Chicago is not now a primary breakpoint on the North-South traffic and that East St. Louis is such a breakpoint only with respect to certain Mississippi Valley traffic. They believe that it is improper to take any portion of the expense of switching and terminal companies in the North and put it into the costs used to price out southern lines' services south of the primary divisional gateways.

Regardless of where the breakpoint for dividing revenues is located, the cost on each side ought to be properly computed and the so-called territorial costs are, in reality, those for groups of carriers operating principally in each territory. We are of the opinion that the southern lines are justified in making this adjustment of the switching and terminal company costs at the Chicago and St. Louis areas; the involved cars are counted in the southern region, and, accordingly, the expenses asso-

ciated with them also should be included in that region. While revenue does not ordinarily afford a precise indication of costs, the southern lines' apportionment for the switching and terminal companies on the basis of total transportation revenue is an appropriate and practical method for estimating here the amount of a refinement justified in principle. This adjustment increased the southern lines' proportion of the costs of official-southern traffic by 0.16 percentage point or in revenues about $794,000.

d. Count of cars interchanged, originated, and terminated.—Rail Form A cost applications are based on the count of cars from the Freight Commodity Statistics which, briefly stated, provide that certain cars carrying shipments which are transferred between rail and water carriers, such as lake cargo coal, tidewater coal, and ex-lake ore, will be classed as cars interchanged and that certain other cars carrying shipments transferred between rail and water carriers will be classed as cars originated and terminated. This creates a situation where a car of coal transferred to a ship at an Atlantic port would be classified as interchanged if the shipment is destined to New England, and as terminated if the coal is destined to Europe. Further, coal in official territory going to Canada and transferred from rail to vessel at a Great Lakes port is interchanged, whereas phosphate transferred from rail to vessel at Tampa, Fla., is terminated.

The southern lines contend that for the purpose of determining relative costs incurred by northern and southern lines, it is necessary that cars receiving comparable service be counted in a consistent manner in both territories. The southern lines urge that all of these cars which receive such port service should be classed as originated or terminated because they all are said to receive similar switching service. That a larger proportion of these cars in the North than in the South was classified as interchanged is said to inflate both terminal and inter-

change unit costs more in the North than in the South to the southern lines' disadvantage. To correct this alleged inflation, they examined the information furnished periodically to the Commission for the purpose of reconciling its study of terminations reflected in its Carload Waybill Statistics publication with the Freight Commodity Statistics. They found that 1,803,499 cars in the North and 129,019 cars in the South should be changed from "interchanged" to "originated plus terminated." The number of cars originated and terminated was thereby increased 5.4 percent for eastern district, 8.7 percent for Pocahontas region, and 1.1 percent for the southern region. This had the effect of reducing the costs $2,003,871 in the North and $555,541 in the South, and of changing the South's proportion of total costs from 53.44 percent to 53.67 percent, an increase of 0.23 percentage point.

The northern lines contend that the switching characteristics of the port service between rail and vessel of this traffic are more akin to interchange than to terminal service, that interchange costs vary greatly, and that the information available is inadequate to correctly compute the adjustment. The switching characteristics of this traffic are described by the northern lines as follows:

> That the service at tidewider ports on coal, and the lake ports on coal and ore, is interchange rather than terminal is apparent from the facts with respect to these services. Taking lake cargo coal as an example,
> 59 the coal trains go to the railroads' lake front yards at the ports. Unlike cars which are to be terminated, the lake cargo coal cars are not then moved to various industries in transfer runs and then switched to effect delivery at the consignee's plant. Rather, they are moved to a dumping machine at the railroad's water front yards and there dumped into the lake vessel. It is obvious that this service is much more akin to a movement to an interchange track than to a transfer and switching movement to effect delivery

to a consignee. The fact that the car is not given over to the boat line along with the lading cannot, in itself, mean that the shipment is not interchanged. The interchange of an l.c.l. shipment between railroads is not accompanied by a delivery of the car which carried the shipment; but, nevertheless, it is an interchange. Also, the fact that the interchange is with a boat rather than with a railroad—that the movement is to a dumping machine rather than to an interchange track with another railroad—cannot detract from the essentials of the operation and their significance from a cost standpoint.

The northern lines contend that interchange costs vary greatly and that lake cargo coal, tidewater coal, and ex-lake ore are not in a class by themselves. They state:

> Of course, interchange service may involve high, low, or average expense, just as terminal service may involve high, low, or average expense. For example, the interchange of cars between railroads in New York Harbor necessitates the expense of floating service. So does the interchange of cars between the Pennsylvania and connecting lines at Norfolk. Another illustration of an expensive interchange service of cars is in the case of traffic which formerly moved between interior points in the East and interior points in the Southwest over the so-called break bulk water routes. This traffic even when moving under joint rates (like some of the lake cargo coal traffic) required transfer from car to vessel at the ports.

They also urge that the information furnished to the Commission for purposes of reconciling the waybill study with the Freight Commodity Statistics is inadequate for the purpose of computing the number of cars to be transferred from interchange service to terminal service and that a substantial portion had to be estimated.

There is a great variation from one point to another in the amount of both terminal switching and interchange switching due to the physical layout of the tracks, volume handled, and other causes. Rail Form A gives an equating factor of 1.0 to origin or destination switching and a factor of 0.5 to interchange switching which reflect the relative amount of switching. The northern lines have referred to the similarity of switching at lake ports to interchange switching. Also, because of the large volume of this traffic, it lends itself to multiple-car block switching which is less costly than terminal switching and would justify an equating factor less than one. The reconciliation between the waybill study and the Freight Commodity Statistics had to do only with terminations, and therefore the originations were estimates only. These included the large blocks of traffic received by boat, transferred to car, terminated on rail, and which were counted as interchanged at the port. This traffic has been counted as interchange traffic for many years. The rates on this traffic are different than the rates on traffic originated or terminated at the same ports. Evidence was introduced to show that the switching characteristics of the port service on this traffic are more akin to interchange than to terminal service. There is great variation from one point to another in the amount and cost of both interchange and terminal service. There is no evidence that the service performed on this traffic is comparable to the average service in originating or terminating traffic in official territory. All things considered, we are of the opinion that the estimate lacks sufficient probative force, that the contentions of northern lines have merit, and that a change in the classification of this traffic for costing purposes in this case is not justified. It has therefore not been included in our restatement of the costs.

e. Car costs.—In the transportation of official-southern traffic, 15 percent moves in refrigerator and tank cars, mainly mileage basis cars, and 85 percent in per diem basis cars. It is the car costs of the per diem cars which

are at issue. The southern respondents contend that the territorial differences in car costs are due to factors unrelated to the traffic in this case. To correct this situation, they urge that average car costs for the United States should be used in both territories. The territorial difference in car costs reflected in Form A for a boxcar with a 28.9-ton load moving 350 miles with one terminal is—

		Percent
Official territory	$16.20	132
Southern region	12.27	100
Difference	3.93 [1]	32

[1] Assuming equal empty return ratios.

The relative size of this difference may be judged by comparison with the total out-of-pocket cost of the same service in the southern region of about $85.

In urging United States average car costs, the southern lines list three reasons in explanation of the variation in car costs between territories, and contend that none of these reasons has any bearing on the relative costs incurred in handling official-southern traffic. As the first reason, they state that the territorial average car cost reflects the composite cost of the car fleet owned by each group of roads and there is a different car fleet in each territory very different from the consist of the cars handling official-southern traffic. It is stated that differences in the car costs produced by Rail Form A as between territories do not measure the differences in the cost of repairing boxcars but rather the difference in the composition of the car fleet. About 82 percent of the car-miles of study traffic (per diem cars) in each territory are handled in boxcars.

Information is adduced as to the percentages of ownership of each type of car in each territory and the percentage of car-miles made by each type of car. We view the per-

centages of ownership as more meaningful since the owning road bears the cost of repairs, depreciation, and return. As to boxcars, the proportion in the North is 36.9 percent and in the South it is 37.9 percent; this difference is too small to be significant. The major differences in ownership are that the North has 7.6 percent points more open hopper cars and the South has 7.0 percentage points more rack cars.

These percentages may be said to equalize each other,
61 and, in any event, such cars are used only on a limited basis in the instant traffic movements.

Costs per day or per year for repairs, depreciation, and return are shown to be insignificant as between types of cars. However, utilization is the main differentiating factor in costs between individual types of cars.

The effect of the composition of the car fleet on costs developed in Rail Form A can be measured by its effect on car utilization, as follows:

		Percentage of ownership		*Miles per year of composite car*	
Type of car (1)	*Miles per year* (2)	*Official territory* (3)	*Southern region* (4)	*Official territory* (2) x (3) (5)	*Southern region* (2) x (4) (6)
		Percent	*Percent*		
Box	19,635	36.9	37.9	7,245	7,442
Flat, including rack	12,456	1.8	9.7	224	1,208
Stock	16,953	.7	.6	119	102
Gondola	9,503	17.5	15.2	1,663	1,444
Open hopper	11,827	40.4	32.8	4,778	3,879
Covered hopper	13,816	2.5	3.8	345	525
Other (average)	15,178	.2	0	30	0
		100.0	100.0	14,404	14,600

As indicated above, however, the effect of the composition of the car fleet in each territory, as reflected by the overall utilization, is only slight, 14,404 in official territory as against 14,600 in the South. Any explanation for the dif-

ference of 32 percent in the car costs between the two territories would lie elsewhere.

The second reason advanced by the southern lines on this point is that the territorial average car cost developed in Rail Form A is strongly affected by per diem debits or credits. This, they assert, has a distorting effect because the basis used in computing Rail Form A costs differs from that used in determining per diem rates. The third reason is that in determining the unit car costs by dividing the cost of cars owned by the car-miles operated, the numerator and the denominator do not represent the same cars in any given territory. These two reasons are related and will be discussed together. Under Rail Form A, the cost to the railroads of furnishing freight train cars includes the following items:

(a) owner costs (repairs, depreciation, and return on investment) for all cars owned, including both those serving on line and those serving off line, offset by per diem received for those cars serving off line;

(b) user costs (repairs and inspection) of all cars on line, both owned and foreign;

(c) per diem paid for foreign cars on line;

62 (d) repairs (responsibility of owner) to foreign cars offset by amounts billed; and

(e) overhead costs.

The sum of these costs is divided by the car-miles run on line by both foreign and domestic cars to give a cost per car-mile. Thus, the numerator and denominator are consistent; both represent cars serving on the railroad.

The repairs and maintenance represent actual payments for materials and wages; per diem is a cash payment; depreciation is a portion of money paid in the past to purchase cars and allocated to the present period; and even return on investment, a cost of capital, can be considered as analogous to interest payments on money borrowed to pur-

chase cars. Thus, all these items represent actual outlays of moneys and must be recovered by the railroads if they are to remain financially solvent. The determination and fixing of a rate of per diem which is fair as between all railroads and sections of the country is a difficult and complicated problem into which many considerations enter. However, after the rate is determined it becomes an actual disbursement settled in dollars and cents and properly a part of the costs for each road and territory in the year incurred.

The per diem collected by a road for the use of its cars by others should be used to offset its car costs incurred on the lines of the foreign carriers, for it is assumed that, allowing for exceptions in special situations, the per diem charge generally reimburses owning roads for expenditures in owning and maintaining cars in working order.

All of the items entering into the Rail Form A car costs represent actual expenses, and therefore, any difference in the car costs between the two territories, whether caused by per diem or other items, is not a discrepancy but is a reflection of the actual situation, and this difference (because it is actual) should be considered in the comparison of the relative costs of the two territories.

The southern lines contend that the higher average car cost in the North is a reflection of the average car which is largely hopper and gondola cars, but that the cost per car-mile for box cars is no higher in the North than in the South. This arithmetic is illustrated as follows:

Car costs (car repairs, depreciation, and return)

	Cost per car-mile (cents)		
	Official	*South*	*U.S. average*
Box	3.0	3.0	3.0
Gondola and hopper	6.0	3.0	4.5
Other	4.0	4.0	4.0
Average car	4.3	3.3	3.8

The southern lines explain that open top car costs are higher in the North because of the effect on car costs of per diem debits and credits and the mechanics of Rail
63 Form A wherein the per diem computed on reproduction costs is added to or subtracted from a cost based on original cost. The Clinchfield is cited as an extreme case in which the per diem credits are so great that they create a negative figure for the return on investment portion of the car cost. The southern lines conclude that it is wrong to charge, in effect, to boxcars a higher cost caused by the per diem on open top cars through the aggregation of car costs on all types of cars, and, therefore, they use for both territories the United States average car cost.

In rebuttal the northern lines make the following points: First: Open top cars are not more costly than boxcars. They quote the testimony in another proceeding of a southern lines' witness to the effect that, in his opinion, the cost of maintaining a boxcar is considerably higher than the cost or maintaining an open top car. Contending that the purchase price of a car influences both the return and depreciation elements of car cost, northern lines show that in 1959 the average cost of general service boxcars in the United States was $9,851; that of open hoppers, $8,715; and gondolas, $8,409.

Second: In regard to the effect of utilization on the comparative car-mile costs of open hopper cars, the official territory ownership was 40.4 percent and utilization in car-miles was 40 percent whereas the southern region had an ownership of 32.8 percent and utilization of 23.6 percent.

Third: As to the Clinchfield, the northern lines cite the Pittsburgh & Lake Erie in their group as being in the same situation.

The southern line's arithmetical illustration depends entirely on the assumptions that the car-mile cost of gondola and hopper cars is twice as great in the North as in

the South and twice as great as the boxcar costs. There is no sound evidence to support these assumptions. Indeed, the uncontroverted cost and utilization figures furnished by the northern lines render them highly improbable.

We recognize that per diem charges have been based upon car costs computed on a reproduction basis insofar as depreciation and return on investment of the cars are concerned. This differs from the original cost basis used in Form A car cost computations for owned cars. As explained above, the Form A method necessarily includes per diem in the car costs, and is appropriate in situations where, as here, the issues involve divisions of rates on almost all commodities handled in different types of cars, although mainly boxcars, and between numerous carriers throughout both territories. We distinguish the situation here from that presented in *Louisville & N. R. Co. v. Southern Ry. Co.*, 319 I.C.C. 639, sustained in *Carolina & N. W. Ry. Co. v. United States*, 230 F. Supp. 581 (W.D.N.C. 1964), wherein an adjustment for reproduction costs was made. There the sole commodity at issue was coal (not involved here), only a certain kind of car was used and such equipment was owned exclusively by the originating carrier, the traffic moved intraterritorially over only specified segments of each carrier's lines, and the car costs of the destination carrier consisted solely of the per diem charge. As to the Clinchfield, that carrier is also largely a coal road. Such traffic is not at issue here, and, in any event, that carrier's situation is offset by that of the Pittsburgh & Lake Erie.

There are very real differences in the car costs in each territory and the causes are known. Among these causes are: a difference in utilization of 39.4 car-miles per
64 day in the North and 49.5 car-miles per day in the South; differences in tax and wage rates; and a difference in the relative amount of off-line use of owned cars in all territories. Moreover, there is a greater relative

use in connection with the traffic here at issue of cars owned by official territory railroads than of cars of southern ownership. Eliminating cars of other ownership for purposes of comparison, cars owned by official territory railroads made 54 percent of all car-miles although only 41 percent of those car-miles were run in official territory.

The use of a national average car cost conceals territorial differences in cost which are important in the consideration of divisions between the two involved territories. Accordingly, separate territorial freight train car costs will be used in our restatement.

f. Freight car empty return ratios.—The southern lines take the general position that the history of costs reflects a refinement away from system average costs. Form A departs from overall system average costs by separating line-haul and terminal services, assigning costs on the basis of load per car, and separating tare weight and empty return ratios by type of car. Territorial empty return ratios for all types of cars were broken down into empty return ratios for each of six types of cars in the first 7-day study (August 15, 1948, to July 11, 1949) and for each of 10 types of cars in the second 7-day study[1] (October 22, 1956, to August 18, 1957). Dividing "gondola and hopper" into three types and "flat" into two types of cars is said by the southern lines to be a necessary refinement of the empty return ratios. Further refinement of empty return ratios among the kinds of boxcars and refrigerator cars is, according to the southern lines, consistent with cost finding development and necessary to measure more accurately the costs of the traffic at issue.

The southern traffic study shows that 69.3 percent of the car-miles are incurred by boxcars and 9.7 percent by refrigerator cars. The southern lines changed the empty

1. Cost section statement No. 6-57, "Percent of Empty to Loaded Freight Car-Miles by Class of Equipment and Performance Factors for Way, Through and All Trains Combined."

return ratios from 39 percent in official territory and 33 percent in southern region for all boxcars to 100 percent for auto parts traffic and 30 percent for the remainder of the boxcar traffic in both territories, and the empty return ratios for refrigerator cars in official territory from 90 percent to 75 percent and in southern region from 76 percent to 84 percent. The effect of these adjustments increases the proportion of costs in the South by 0.51 percentage point.

(*1*) *Boxcars.*—The northern lines in applying Rail Form A used empty return ratios based on the second 7-day study of loaded and empty car-miles which produced for each group a single ratio covering all types of boxcars and another ratio covering all ownerships of refrigerator cars. In this category of boxcars are general purpose cars which can be utilized by and are available to all shippers for loading all types of commodities not requiring special type equipment, and boxcars suitable for loading special commodities which, though they may be suited for some type of return load, are in assigned service and thus returned empty, with some exceptions, to the point of loading. Included therein are cars used for transporting auto parts, which are specifically designed to handle such commodities. This 100-percent empty return ratio for specially equipped cars is contrasted by the southern lines with average ratios of less than 40 percent for all boxcars including the assigned cars.

65 The southern lines present the following in support of their adjustment:

(a) A computation showing that if special boxcars have an empty return ratio of 100 percent and general boxcars one of 30 percent, or if special boxcars account for 13 percent of loaded boxcar-miles in the North and 4 percent in the South, the result will be an overall empty ratio of 39 percent in the North and 33 percent in the South, which is what the 7-day study produced.

(b) A showing of the Commission's Transport Statistics of the United States for 1956 as follows:

Boxcars owned

Territory	*Total*	*Special device*	*Percent special device is of total*
Eastern district	267,266	26,779	10.03
Pocahontas region	32,834	1,501	4.57
Eastern plus Pocahontas	300,100	28,280	9.42
Southern region	100,191	4,122	4.11

The southern lines contend that the above indicates that the southern carriers own substantially fewer special device cars than do the eastern or official carriers involved in this proceeding.

(c) The following showing of the relationship in each territory between the amount of traffic commodity class No. 623, Vehicle Parts, N.O.S., and Total Manufactures and Miscellaneous based on carloads originated and terminated and on freight revenue:

VEHICLE PARTS 623—1956

	Eastern district plus Pocahontas region (1)	*South* (2)	*Total (column 1 plus column 2)* (3)	*Percent South of total (column 2 and column 3)* (4)	*Percent eastern district plus Pocahontas region of total (column 1 and column 3)* (5)
	Carloads originated and terminated				
Vehicle parts, N.O.S.	829,934	62,033	891,967	6.95	93.05
Manufactures and miscellaneous	12,669,348	3,787,287	16,486,635	23.01	76.99
Percent vehicle parts	6.55	1.64			
	Freight revenue				
Vehicle parts, N.O.S.	$130,212,468	$19,329,691	$149,542,159	12.93	87.07
Manufactures and miscellaneous	$1,827,508,648	$625,523,731	$2,453,032,379	25.50	74.50
Percent vehicle parts	7.13	3.09			

	Traffic originated or terminated on other than class I line-haul roads participating in official-southern divisions	
	Number of cars	*Percent of cars*
In official territory	16,697	1.73
In southern territory	55,826	5.77

The northern lines do not question the count of car data regarding short lines on the abstracts underlying the southern lines' traffic study, but observe that there are many class II railroads in official territory which perform only switching or terminal service, whose charges for such service are paid entirely out of eastern line-haul carriers' revenue, and whose participation is not ordinarily shown on the abstracts. The southern lines introduced the following table to illustrate the imputation of class I railroads' costs to the services of these:

71

Costs of short lines in year 1956 imputation of class I roads' costs compared with application of the actual costs of the short lines

Source	*North*	*Percent*	*South*	*Percent*
Territorial average Form A costs	$537,359	100.0	$1,594,486	100.0
Southern lines' study of short-lines cost	509,943	94.9	1,963,632	123.2
Difference	−27,416	−5.1	+369,143	−23.2
Northern lines' study of short-lines' cost	496,545	92.4	1,878,029	117.8
Difference	−40,814	−7.6	+283,543	+17.8
Difference between northern lines' and southern lines' studies	13,398	2.5	85,603	5.4

The above table shows that the imputation of class I road cost to the service of these short lines overstates the costs in the North by $27,416 (southern lines' method) or $40,814 (northern lines' method) and understates the costs in the South by $369,146 (southern lines' method) or $283,543 (northern lines' method).

The southern lines' method reflects the cost level of each short line while retaining the separation between line-haul services (car-miles and ton-miles) and terminal services (cars and tons), whereas the northern lines start with the identical actual carload freight cost for each short line as used by the southern lines but, instead, spread the entire costs of each short line over revenue ton-miles, producing an average cost per revenue ton-mile with no separation of line-haul and terminal services.

In our opinion, and we so find, the southern lines' cost study for short lines is the more acceptable procedure in that it conforms to the principle of separating line-haul and terminal costs set forth in Rail Form A. The southern lines' traffic study more closely reflects the actual level of costs of each participating short line, whereas the northern lines imputes to each short line the cost level of class I railroads. Basically, the class II and the class I railroads should reflect their own respective costs. This adjustment is shown in our restatement of the costs.

h. Adjustment of switching costs to eliminate the effect of volume switching at origin and destination.—The territorial average switching minutes per car at origin or destination, 1956, are as follows:

72

	Official territory		*Southern region*	
	Boxcars	*Other cars*	*Boxcars*	*Other cars*
Cost section study application of Form A	25.9	28.8	17.3	19.2
After the effect of southern respondents' adjustments for "Switching and Terminal Cost" and "Corrected Car Count"	25.4	28.2	17.8	19.8
After adjustment for volume switching	27.65	30.72	26.03	26.03
Volume switching adjustment	2.25	2.52	8.23	6.23
Total amount added to costs by this volume switching adjustment	$1,310,743		$3,648,130	
Change in percentage of costs	44.71–44.45=0.26		55.29–55.55=+0.26	

66 The southern carriers contend that the foregoing demonstrates that they participate to a much more limited extent in vehicle parts traffic than to the official carriers.

(d) The following showing of the empty return ratio of boxcars and the proportion of vehicle parts traffic to all traffic in boxcars for each of the three groups of railroads:

	Boxcars empty return ratio [1]	*Percent vehicle parts 623 to total boxcar traffic* [2]
	Percent	*Percent*
Roads serving Detroit having heavy proportion of vehicle parts to total boxcar traffic [3]	49	14.5
Other official	34	4.2
Total official	39	6.8
Southern region	33	2.6

[1] Second 7-day study.

[2] Percent carloads of vehicle parts 623 handled in boxcars and percent carloads of all traffic handled in boxcars from statement No. TC-3,1956, applied to total carloads handled, vehicle parts and total carloads all traffic, respectively, from Freight Commodity Statistics, Year 1956.

[3] NYC, Wabash, C&O, DTI, and GTW.

(e) A statistical showing of the effect on the empty return ratio from the elimination of vehicle parts traffic. The waybill study does not show for interterritorial traffic the number of car-miles in each territory. Therefore, this missing element was approximated by combining certain items and proportions in the waybill study with originations and terminations and revenues from the Freight Commodity Statistics. The final result after eliminating vehicle parts traffic shows an empty ratio which is 4 percentage points higher in official territory than in southern region.

These five items will be analyzed below:

(a) This is merely a computation showing what the effect would be if certain assumptions are made. By itself,

it does not prove that those conditions actually exist, nor is there other sufficient evidence to this effect.

(b) This shows the percentage ownership of boxcars by railroads in these territorial groups. Cars are interchanged among territories and it is quite probable that cars of eastern ownership travel many car-miles in the western district. It is the car-miles in each territory which affect the empty ratio, and the relative ownership does not necessarily coincide with the relative number of car-miles.

(c) The use of the relationship between the numbers of carloads and the revenues of vehicle parts to total manufactures and miscellaneous group of commodities does not measure the relationship of special boxcars to total boxcars for the reason that many boxcars carried commodities other than manufactures and miscellaneous, and vehicle parts do not all move in special boxcars.

(d) The comparison is based on only three observations and is therefore too limited to be representative. At best, it may be a coincidence or caused by some unknown factor, and is not otherwise supported.

67 (e) The statistical determination of the effect of special cars on the empty return ratio for all boxcars is based on certain assumptions, such as that commodity class No. 623, Vehicle Parts, N.O.S., moves in special cars only and that all special cars have a 100-percent empty return. These assumptions have not been proven. In fact, 12 percent of the vehicle parts move in other than boxcars. This statistical determination is an attempt to show an effect on the empty ratio with mathematical exactness. However, such a degree of accuracy is inappropriate in this particular computation because the individual steps taken to arrive at the answer contain estimates or approximations with a wide margin of error. For example, the percentage distribution of intraterritorial car-miles includes different amounts of car-miles by other than boxcars in each terri-

tory. The equating factors for revenue are also only very rough approximations.

There are undoubtedly instances where specially equipped or directly assigned boxcars have a 100-percent empty return. The record does not indicate, however, whether this is generally prevalent or whether it approaches 50 percent or 100 percent for this class of cars. The five items above tend to show that these cars may have some effect on the empty return ratio, but they do not support a conclusion that any adjustment is warranted here as to the amount of the effect other than that reflected in the averages used.

The southern lines cite the Commission's decision in *Louisville & N. R. Co. v. Akron, C. & Y. R. Co.*, 309 I.C.C. 491, the *Border Point* case, as a precedent for adjusting the empty return ratios because of specially equipped cars. The circumstances were different in that case. Most of the line-haul costs were on only one side of the border. In addition to territorial average costs, 1956 systemwide operating costs were computed separately for the Pennsylvania, the Detroit, Toledo & Ironton, the Louisville & Nashville, and the New York Central. In addition, the Detroit, Toledo & Ironton had 2,596 specially equipped cars for use in transporting automobile parts which generally moved loaded from Detroit to Louisville, and returned empty. This type of car constituted more than half of its owned cars in this area. Moreover, the Louisville & Nashville border point traffic was largely composed of vehicle parts and electric appliances moving to or from Louisville. It was necessary to develop specific data for this dominant traffic. In contrast, the instant proceedings embrace a large and varied body of traffic, incurring line-haul costs on both sides of the border, and the 33,983 cars carrying vehicle parts, commodity No. 623, are not at all dominant but, rather, constitute only 3.5 percent of the total number of cars.

It is claimed that the unbalanced flow of traffic to and from Canada contributes to the high empty return ratio in official territory. A study based on Canadian commodity statistics shows that, excluding automobiles and parts, 468,456 carloads were delivered to Canadian connections and 691,316 were received. If every carload going to Canada could be placed in a car coming therefrom which was unloaded here it would produce the following result:

691,316 southbound loads		
468,456 northbound loads		
222,860 empties	19	percent
1,159,772 total loads	100	percent

68 Thus, under ideal conditions, which rarely obtain, an empty ratio on Canadian traffic of 19 percent might be possible. The figures given as to the imbalance in traffic flow do not indicate that Canadian traffic has a greater empty return ratio than other traffic.

The detail of the southern lines' empty return ratio adjustments follow:

	Official territory	*Southern region*
	Percent	*Percent*
All boxcars	38.93	32.50
Less effect of special device cars	4.27	1.62
General purpose boxcars	34.66	30.88
Less effect of Canadian traffic	2.13	0
Less judgment factor	32.53	30.88
	2.53	0.88
	30.00	30.00

The witness for the southern lines summarized this evidence in the following words:

Bearing in mind that the special device adjustment is merely illustrative and that the use of special device cars for other commodities is of relatively greater importance in the highly industrialized east than in the south it is my conclusion that, as far as North-South traffic is concerned, the empty ratio for box cars is no greater in official territory than in the south. In my judgment a fair ratio for either territory would be 30 percent.

In light of the foregoing, we find that: (1) the adjustment for special device cars of 4.27 percentage points is not adequately supported; at best, it is merely illustrative; (2) that the adjustment for Canadian traffic is in error; and (3) that the last adjustment of 2.53 percentage points is purely an unsupported assumption.

(2) Refrigerator cars.—The second 7-day study developed empty return ratios for eastern district of 90 percent, Pocahontas of 86 percent, and southern region of 76 percent. The southern lines urge that these are not representative of North-South traffic because they include meat traffic, of which very little moves between the North and the South and which has a 98-percent empty return. The southern traffic study shows 80,379 refrigerator cars of which only 1,642 or 2 percent are meat. The waybill study shows that based on originations and terminations (not car-miles, which are not available) fresh meats constitute 19.1 percent of refrigerator car traffic in official territory and 7.2 percent in southern region.

The above percentages are based on a single commodity group, No. 215, Meats, fresh, n.o.s. Generally, a group average is not invalidated because one of the items included in the group is above or below the average. It is normal to have items above offset by those below. For example, the Illinois Central Railroad handles a substantial movement of bananas from New Orleans to destina-
69 tions in official territory. Bananas are transported in refrigerator cars owned or leased by the Illinois

Central and assigned to the movement of bananas. These assigned cars have an empty ratio of 100 percent. In considering whether the cars with 100-percent empty return affect one territory more than another, all such cars must be recognized, not just meat cars. The significance of the banana cars, commodity class No. 51, Bananas, fresh, is that whereas there are proportionately more meat cars in official territory, there are proportionately more banana cars in the southern region. Further, banana cars comprise a much greater proportion of North-South traffic. If all refrigerator cars with a 98- or 100-percent empty return had been considered, the showing would have been entirely different than that for meat cars alone.

The southern lines show that the second 7-day study produced varying results for individual days ranging from 96 percent to 66 percent as the empty return ratio for refrigerator cars in the southern region. The empty and loaded refrigerator car-miles of the principal car owning companies in the southern region obtained from replies to questionnaires sent to the southern roads indicate an empty ratio of 84 percent for all traffic (but not all ownerships) in 1956. This coincides with ratio reported by the Association of American Railroads' Car Service Division on Form CS-57A. This empty ratio of 84 percent is considered more accurate by the southern lines than the results of the 7-day study because it is based on records for the full year and is therefore used in their cost study. However, the southern lines are unwilling to accept the empty return ratios for refrigerator cars in official territory developed in either the 7-day study or the CS-57A reports, and use instead an empty ratio of 75 percent which is the experience of Fruit Growers Express in official territory. Fruit Growers Express handles only 43.3 percent of the North-South refrigerator traffic but the loaded and empty refrigerator car-miles of the other companies were not available to the southern lines. In other words, in determining the ratio of empty return to use in official territory,

the southern lines did not consider the empty return experience of all refrigerator cars of ownerships which handle 56.7 percent of the North-South traffic.

The studies of refrigerator car traffic relied on by the southern lines, like the cost section's 7-day study, cover intraterritorial traffic and traffic from and to other territories and are not confined to North-South traffic. However, unlike the 7-day study, they do not include all traffic and they are not on a comparable basis in both territories.

Although neither party utilized the statistics in the computation of their costs, the southern lines in their exceptions to the recommended report and at oral argument urge that we should use these ratios in our restated costs. The CS-57A statistics cover only private line freight cars and omit railroad owned cars. Thus, it is a complete count of loaded and empty miles for only part of the refrigerator cars. We find that the 7-day study, which is a sample of all of the cars, is more reliable.

For the reasons discussed above, we find that the empty return ratios for both boxcars and refrigerator cars developed by the special studies of the southern lines are not as sound an estimate of the empty return incurred by the official-southern traffic as are the 7-day study territorial empty return ratios. The latter reflect the compilation of actual data reported by the railroads on a
70 comparable basis in each territory under an order of this Commission.

g. Short lines (class II railroads).—The southern lines allege the impropriety of pricing out the services of the short lines (class II railroads) on the basis of territorial average class I railroad costs. They measured in their traffic study the amount of service rendered by short line roads, and, in doing so, adjusted their Form A territorial average costs, which were based on class I railroads, to reflect the level of cost of the short lines. They then ap-

plied these adjusted unit costs to the service units of the short lines. The resulting increase of the southern lines' proportion of the costs by 0.09 percentage point amounted to approximately $446,000 in revenue. They employed the following procedure in their cost study in order to reflect the level of short-line costs:

1. The total costs of each short line that participated in the official-southern traffic were determined from the 1956 annual reports of each carrier.

2. The costs which were imputed to the operations of each short line by the Rail Form A costs of the class I roads were then aggregated.

3. The ratio of the actual costs in 1. above to the cost imputed by the Rail Form A costs of class I roads in 2. above was computed for each short line.

4. And finally, the ratios thus developed were applied to the territorial Form A costs of official-southern traffic on each class II road.

The actual expenses and traffic volume for the year 1956 as reported by the class II carriers in their annual reports were used in computing these costs.

The northern lines objected to the assumption that compilation of 1956 cars originated and terminated were on the basis of 1955 operations, and that the traffic consist, operating characteristics, and the resulting expenses would be the same for 1956 as for 1955. These assumptions were made because the typical short line report in the year 1956 did not contain as much detailed data as the report for the year 1955.

The southern lines' traffic study showed the number of cars originated or terminated on short lines for the official territory and southern region to be:

Some volume commodities frequently move in multiple-car blocks at origin and/or destination with a consequently lower switching cost than for commodities usually handled in one car at a time. The following table indicates the significance of certain volume commodities:

	Number of cars originated or terminated (year 1959)—		*Number of cars official-southern traffic involved in this proceeding*
	On official territory roads	*On southern region roads*	*(as shown in southern lines' traffic study)*
Pulpwood	162,572	1,102,741	564
Sand and gravel	340,072	653,972	2,229
Wet phosphate rock	——	287,892	None
Crushed stone and rock	407,630	813,734	8,372
Iron ore	789,188	113,452	661
Coal	6,186,315	1,915,566	None
Coke	558,823	79,984	2,811
Fluxing stone and dolomite	395,811	3,558	51
Total cars of volume commodities	8,840,511	4,970,899	14,758
Total cars	23,771,003	10,840,187	967,554
Percent cars of volume commodities to total cars of all commodities	*Percent* 37.19	*Percent* 45.86	*Percent* 1.52

The southern lines urge that their territorial average switching costs are depressed by the large proportion of volume commodities in their region to the point that these costs are not representative of the official-southern traffic which includes only a small amount of these commodities. For this reason, they used in their cost study origin or destination switching costs based on a special study in the South and on an adjustment in the territorial costs in the North.

As stated, there were 967,554 cars of official-southern traffic in the year studied. From this figure, pursuant to a

scientific sampling plan, a preliminary sample containing 497 cars in 8 batches was drawn. From this, a
73 sample of 83 cars was taken. A further (and controverted) subsample of 41 cars was then produced. Of these 41 cars, 16 were terminated and 25 were originated; 26 were handled by yard engines and 15 by train engines.

The southern lines made switching studies pursuant to Rail Form F of all cars at each of the points in southern region where a car in the sample had originated or terminated. The switch engine minutes per car for origin or destination switching varied from 3.39 at Huber, Ga., to 72.54 at Gadsden, Ala., with an average of 26.03 minutes for all 41 cars.

The 41-car subsample was itself further divided into 10 subsamples and a "standard error" of 2.2 minutes was computed. It is virtually conceded by all concerned that error due to sampling cannot exceed three standard errors or 6.6 minutes. Thus, if all 967,554 cars had been studied, the average thereof would have been within the range of 26.03 minutes plus or minus 6.6 minutes, or between 19.43 minutes and 32.63 minutes per car. The terminal switching cost for the southern region in the South's cost study of all 967,554 cars is based on the 26.03 minutes so developed.

The southern lines adjusted the official territory costs by applying Pocahontas region switching minutes to bituminous coal for the entire official territory and using special minute per car factors for iron ore and anthracite-to-washers in accordance with a method used by the cost finding section in its periodic publication "Distribution of The Rail Revenue Contribution by Commodity Groups." The minutes per car were thereby reduced for these commodities with a corresponding increase for all other commodities.

This adjustment, which increases the costs in official territory, was approved by the examiners because: (1) it

is based on a method found useful in certain situations involving coal and ore operations; (2) its purpose was to exclude the effect of those operations; (3) the traffic at issue does not include coal; and (4) the adjustment was proposed by the southern lines. However, upon consideration of the exceptions and oral argument, and especially the fact that the adjustment applied to official territory only whereas the southern region also has a large volume of coal traffic, we conclude and find that a fairer basis of cost comparison between the two groups of parties will be attained by deleting this adjustment.

Evidence was introduced to show that volume commodities comprise over 37 percent of the total traffic in official territory. The northern lines point out that if volume commodities exert a depressing effect upon system average switching minutes in the southern region, the presence of volume traffic in the North produces, at the very least, a corresponding influence on the northern lines. They also urge that 13 study points used by the southern lines to illustrate the difference between system average and volume commodity switching minutes were handpicked for the sole purpose of showing that volume commodities do depress the territorial average. Thus, it is asserted that they are extreme instances, not typical or representative. Moreover, 2 of these 13 points are also among those studied for the 41-car sample. Thus, with the two points being common to both studies, the northern lines contend that it is necessarily erroneous to conclude that the principal volume commodity movements affect territorial switching costs to the extent claimed by the southern lines. They also point out that respondents' principal witness in a prior case studied 582 loaded and 591 empty cars of pulpwood, a major volume commodity, and found 14.62 minutes for origin switching and 17.81 minutes for destination switching, which is not far from the system average figures.

74

See *Reduced Rates on Pulpwood in Southern Territory*, 297 I.C.C. 735, 745.

These three contentions, (1) that volume commodities exist in both territories, (2) that the 13 points were hand-picked and that 2 were common to the points sampled as representative of official-southern traffic, and (3) that pulpwood, a volume commodity, has average switching minutes, are cited by northern lines to show that there is no necessity to make an adjustment for volume commodities. They also urge that a sample of 41 cars is too small to be relied on as representative of almost a million cars of study traffic. They show further that the sample included no cars from Boston, Philadelphia, Detroit, St. Louis, or Buffalo, among other large northern cities, and not a single car of citrus or fresh vegetable traffic.

Of the 967,554 cars of official-southern traffic, 46 percent were southbound and 54 percent were northbound, whereas the 41-car sample showed 39 percent southbound and 61 percent northbound. Thus, the 41-car sample showed 7 percent too many origin studies and 7 percent too few destination studies as compared to the total figure. The 25 cars originated had 24.08 minutes per car and the 16 cars terminated had 29.07 minutes per car. The northern lines point out that although southern lines' operating witnesses have almost uniformly taken the position that it is more burdensome to originate a car in the South than to terminate it, the switching studies of the 41 cars show the opposite.

The 26 cars given yard switching averaged 30.75 minutes and the 15 cars given train switching averaged 17.84 minutes. The original sample of 497 cars contained 59.8 percent given yard switching and 40.2 percent given train switching, whereas of the 41 cars, 63.4 percent were given yard switching and 36.6 percent were given train switching. The northern lines point out that to restore in the same sample the 60-40 relationship of yard to train

switching shown in the more comprehensive sample it is necessary to drop four cars of yard switching from the small sample. If the 4 cars dropped were those with the largest number of switch engine minutes, the average per car for the remaining 37 cars would be 22.30 minutes. If the four cars with the lowest number of switching minutes were dropped the average would be 27.48 minutes.

The northern lines assert that the 41 cars were not selected by subsampling but were later assigned to subsamples. They contend that a distortion of the use of subsamples thereby results throwing doubt on the value of the standard error computed therefrom. They point out that the Form A factors are 17.8 minutes for boxcars and 19.8 minutes for other cars, which is an average of about 19 minutes, and that the principal witness on sampling for southern respondents did not claim any greater reliability for the switching study factor of 26.03 minutes than a range of about 7 minutes, the difference being 19 minutes. Thus, they state that even if the studies were to be taken at face value, there is no justification for the conclusion that the involved traffic, assuming it could be found to be fairly typified by the 41-car sample, "an assumption which offends common sense," is significantly different from average traffic in the South in respect of switching service rendered, since the claimed excess over average minutes and the conceded range of reliability of the study are almost exactly the same.

75 As to the 41 switching studies, 40 were conducted in 1960 and 1 in 1957 whereas the 41 cars were handled during the latter half of 1958 or first half of 1959. Switching minutes were developed for each category of service at all industries in the terminal area. Inasmuch as all cars were included in the divisor in each instance, the minutes attributed to each reflect the average traffic and not necessarily the characteristics of official-southern traffic. No investigation was made to determine whether operations were con-

ducted in 1960 in a manner similar to the time the sample cars moved, and no comparison was made of the volume of traffic at the study points between the two periods. For example, at least one car in the sample was picked from an "A" abstract containing 82 similar movements during the period of 1 month, and there necessarily must have been at least 3 or 4 cars per day, which suggests multiple-car block switching. However, no determination was made of this latter aspect which would have required a reduction of the switching minutes claimed on a single-car basis. The northern lines made an examination of the switching studies and found six alleged errors amounting to an overstatement of 63.87 minutes out of 1,067.20 minutes. Four of the errors were disputed by the southern lines and two amounting to 21.73 minutes were conceded.

The northern lines point out that the switching minute adjustment was made on an entirely different basis in the North than in the South and that although the increase in switching minutes in the South was 46 percent for boxcars and 31 percent for other cars it was only about 9 percent for both kinds of cars in the North. Since the justification for, and intent of, the adjustments were to offset the effect of volume commodities on the average, the amount of the adjustments would suggest four or five times as much volume commodity traffic in the South; but such is not the case.

Northern lines also take the position that assuming that comparable methods had been followed in furtherance of the sought purpose of the switching adjustments the net effect of such an adjustment upon relative costs would have been virtually nil. They assert that this would appear to be so because of the similar, and hence at the very least offsetting, consist of the general traffic of northern and southern lines in terms of the respective proportions of volume commodities handled by each.

This offsetting effect can be approximated for official territory by the following computations, the first of which

assumes that volume switching minutes are the same as in the southern region, and the second that volume switching minutes are greater in the same proportion as the territorial average:

76

	Proportion of cars originated or terminated	*Switching minutes per car*	
	Percent		
Southern region:			
All commodities (regional average)	100.00	× 19.2 =	19.2
Other than volume commodities	54.14	× 26.03 =	14.1
Volume commodities (remainder)	45.86		5.1
Volume commodities (5.1 ÷ 45.86 percent)		11.1	
Official territory:			
All commodities (territorial average)	100.00	× 27.3 =	27.3
Volume commodities	37.19	× 11.1 =	4.1
Other than volume commodities (remainder)	62.81		23.2
Other than volume commodities (23.2 ÷ 62.81 percent)		36.9	
Official territory:			
All commodities	100.00	× 27.3 =	27.3
27.3			
Volume commodities (19.2 × 11.1 = 15.8)	37.19	× 15.8 =	5.9
Other than volume commodities	62.81		21.4
Other than volume commodities (21.4 ÷ 62.81 per cent)		34.1	

Assuming the same difference between boxcars and other cars, the switching minutes per car for other than volume commodities in official territory should be:

	All cars	Boxcars	Other cars
First computation	36.9	34.3	38.1
Second computation	34.1	31.7	35.2
Used in southern lines' cost study		27.65	30.72

The above computations indicate that the adjustment of switching minutes for official territory made by the southern lines is inadequate by from 4 to 7 minutes in comparison with the adjustment they made for their own region, and are therefore rejected.

Territorial average costs are particularly appropriate to the traffic in this case because it is a large and varied body of traffic moving to and coming from terminals in all parts of both territories. In our opinion, and we so find, the depressing effect, if any, of volume switching commodities on the average would affect both territories and, for purposes of comparison, would be largely offsetting.

The switching studies in the South have weaknesses, both in the sample and in the studies themselves. The adjustment in the North was not made on a basis comparable to that in the South, and here, where the relationship of North and South is of prime importance, this is a major defect.

77 For these reasons, we conclude that the contentions of the northern lines are of merit and that Rail Form A territorial average switching costs more accurately measure the relative switching costs on each side of the border of the official-southern traffic than the switching costs computed by the southern lines.

i. Train tonnage adjustment.—The large volume of coal traffic on the Chesapeake & Ohio and Norfolk & Western railroads has a depressing effect on the costs of other traffic because it moves in heavier than average trains. Based on merchandise traffic movements on the Chesapeake & Ohio in trains of 3,200 tons and on the Norfolk & Western in trains of 5,128 tons, the southern lines adjusted the

through train weights used in their cost computations as follows:

	Official territory	*Eastern district*	*Pocahontas region*
Territorial average before adjustment (tons)	3,840	3,434	5,426
After adjustment	3,611	3,434	4,121

This adjustment had the effect of increasing the costs in the North by $867,319 without any change in the costs of the South and resulted in a decrease of the South's proportion of the costs of 0.14 percentage point. This adjustment was necessitated by the proper inclusion of Pocahontas region costs in those of the northern lines and is therefore warranted.

j. Adjustment of constant costs.—The southern lines made two adjustments to constant costs: one, the exclusion of passenger suburban service deficits, and the other, the inclusion in the southern lines' costs of the fully distributed cost deficits on pulpwood and wet phosphate rock which they consider to be related (in transit) to the outbound movement of paper products and dry phosphate rock.

(1) Suburban passenger service deficits.—The southern lines contend that the basic reason justifying the inclusion of passenger service deficits as a part of the cost of providing freight services is that such passenger deficits are almost entirely attributable to the apportioned costs of common facilities which must be incurred in any event to provide freight service. They would include the passenger deficits from intercity service in the constant costs assigned to freight service, but they would exclude the deficits from suburban passenger service for the reason that the suburban service facilities are separate and not used in common with the freight service.

They excluded from the cost of official-southern traffic north of the gateways the amount of $2,830,575, based on

data presented on behalf of eastern territory suburban railroads before the Senate Committee on Interstate and Foreign Commerce in April of 1960 regarding the suburban service of the Boston & Maine, New Haven, New York Central, Delaware, Lackawanna & Western, Central of New Jersey, Erie, Pennsylvania, and Reading railroads. The amount ($377,070) excluded south of the gateways is based on the suburban service deficit of the Illinois Central Railroad.

The northern lines point out that, putting aside entirely the common expenses that are apportioned between freight and passenger service and considering only expenses that are solely related to passenger service, there is a
78 deficit in the southern region whereas in both the eastern district and in official territory the passenger revenues exceed the solely related expenses. Further, in relation to the cost of handling official-southern freight traffic, they contend that there is no difference between that part of the passenger deficit which results from suburban operations and that part which results from through or local passenger trains. They also assert that if the southern lines should not properly be charged with any part of the deficit in handling commuters from "A" to "B" in the East, it would logically follow that the northern lines should not be charged with any part of the deficit in handling passengers from "X" to "Y" in the South.

The southern lines state that the suburban service deficits of the northern roads could be eliminated by the discontinuance of commutation service since the separate facilities maintained solely for suburban service are not used for freight or intercity passenger service. They give the following example: "—Reference to Exhibit J exemplifies the situation which actually exists. It shows track occupancy by various types of trains in the twenty-four hours of a typical week-day of October 1958 on the line of the Pennsylvania Railroad between Overbrook and Bryn Mawr, Penn-

sylvania, which is a portion of one of that company's principal Philadelphia suburban lines. It will be noted that there are four main tracks in this territory. The outside track—No. 1, Eastbound and No. 4, Westbound—are used primarily by suburban trains: while the middle tracks (Nos. 2 and 3) are used primarily for through passenger and freight trains."

It is true that, in the example given, certain track expenses for tracks Nos. 1 and 4 could be saved by abandoning the suburban service and those tracks; however, other costs related to the roadway would continue, such items as land taxes, grading, ditching, culverts, bridges, and signaling systems. Many large passenger terminals are used by both suburban and intercity passengers. In other words, although many individual items of suburban service can be considered solely related, the facilities and service as a whole cannot be considered solely related to suburban service and treated entirely apart from the freight service and intercity passenger service. Because the suburban service deficit includes common costs which must be incurred to provide freight service or intercity passenger service, such costs are properly chargeable to those services to the extent they cannot be recovered from suburban operations, and the deficit from suburban operations should not be excluded from the constant costs. We so find.

(2) Constant cost of transit commodities.—The southern lines included the following amounts in their costs:

Pulpwood	$7,221,986
Wet phosphate rock	615,883
Total	7,887,869

These amounts represent the constant costs not covered by the revenue and deficits sustained by the southern lines in handling, within the South, these commodities into mills which originate South-to-North outbound traffic of paper and paper products and dry phosphate rock.

Both groups have included in their traffic and cost studies the service from point of origin to destination of traffic identified on the interline abstracts as transit traffic.

79 The pulpwood and wet phosphate rock movements are not so identified, and the tariffs for them do not provide for through rates from the points of origin of the raw materials. However, the southern lines claim that a situation, essentially of a transit nature, exists because they maintain rates on the inbound wet phosphate rock and pulpwood which are conditioned upon the outbound movement by rail of the dry phosphate rock and paper products.

The revenue on pulpwood contributes approximately $5 million per year in excess of out-of-pocket costs, whereas the ton and ton-mile method of distribution assigns about $21 million of constant costs to pulpwood. Therefore, say the southern lines, the constant costs in excess of the contribution of pulpwood ($21 million minus $5 million) must be recovered from the high-rated paper and paper products, including southern-official paper traffic. Approximately 54 percent of the paper and paper products originated by the southern lines moves to destinations in official territory, and this traffic produces revenues 36 percent greater than fully distributed costs.

The southern lines urge that they maintain the low rates on the inbound raw materials in order to hold the outbound high-rated paper and dry phosphate rock traffic to rail movement for the benefit of all carriers participating in the haul, and since the northern lines participate in the movement of this high-rated traffic they cannot deny the southern lines divisions which reflect the services performed as an integral part of the joint enterprise.

The northern lines made three principal points in rebuttal:

First: The northern lines can make an even better cost showing on the basis of out-of-pocket costs:

Eastern percentages of total costs on general traffic at average hauls.

Year 1956	Fully distributed	50.7 percent
	Out-of-pocket	51.7 percent
Year 1957	Fully distributed	50.9 percent
	Out-of-pocket	52.0 percent

Even if fully distributed costs should be completely disregarded the northern lines' case would not suffer, yet the whole basis of the suggested adjustment depends on the use of fully distributed costs which assign the constant expenses on a ton and ton-mile basis.

Second: The wet phosphate rock and pulpwood move wholly within the South, and the northern lines have no participation in their rates, no control over them, and no voice as to their level. These rates on pulpwood "were made on a low basis to attract plants from the North, and now the southern lines want the Commission to require eastern lines to help make up the deficit under constant costs which they incur." The northern lines also point out that another reason for the low level of rates on pulpwood and wet phosphate rock is competition from other modes of transportation, and that any commodity which earns $5 million above out-of-pocket costs is very worthwhile.

Third: The northern lines urge that this adjustment cannot be made by the southern lines in their territory alone but, to be fair, must also be made in the territory of the northern lines with respect to the movement of such raw materials as iron ore and coal and fluxing stone, for example, which go into the manufacture of iron and steel which move from North to South, and as to which there could be no movement without the prior movement of the raw material.

The southern lines justify their adjustment on the basis of an essentially transit relationship on pulpwood and wet phosphate rock. On this point, the northern lines contend that a transit relationship is one that is readily identifiable from the tariff and either exists or does not exist. If an actual transit relationship exists, they assert that the through rates from the initial origin of the raw material via the transit point to the ultimate destination of the finished product would here be in issue if that movement were between the territories involved. In that situation, the through cost would likewise appropriately be considered in fixing divisions. But, they note, no transit is here provided by the appropriate tariffs.

They further point out that the only joint interterritorial rates here before the Commission are those applying on paper and paper products and on dry phosphate rock. They characterize the so-called transit arrangement as, at best, a recognition of the obvious physical fact that the production of finished and semifinished products necessitates an inbound flow of basic materials.

The southern lines' position that losses on pulpwood and wet phosphate rock are incurred in behalf of a joint enterprise (paper and dry phosphate rock traffic), in which the northern lines share, is largely refuted by the evidence that these rates yield revenues profitable to the extent of $5 million a year above out-of-pocket costs.

The transfer to paper products and dry phosphate rock of that portion of the constant costs allocated to pulpwood and wet phosphate rock which the revenue fails to cover is based on a misunderstanding of the nature, significance, and use of constant costs. Each shipment must pay its out-of-pocket costs since they are incurred by and because of that shipment. However, the constant costs, because they are incurred on behalf of the operation as a whole, should

be shared by all traffic. In our judgment, the ton and ton-mile apportionment of constant costs made in the same way in each territory on this large and varied body of traffic is fair to both territories, and the transfer to interterritorial traffic of a part of the constant costs which had been assigned to intraterritorial traffic is not well founded. Stated in another way, we cannot find that for purposes of interterritorial divisions the pulpwood and wet phosphate rates within the South are so specifically and intrinsically related to the rates under consideration that there is a sound basis here for the adjustment made by the southern lines. *Cf. American Sugar Refining Co. v. Ahnapee & W. Ry. Co.*, 322 I.C.C. 717, 720; *Sugar from the West to Central Territory*, 319 I.C.C. 686, 705.

k. Equalization of gateway interchanges.—The cost study submitted by the southern lines does not include an adjustment for equalization of interchange costs at gateway points although their operating witnesses testified that at many of the important gateways the amount of service and the joint yard cost are equalized. However, they did equalize the amount of service performed by each railroad through the equalization of engine-hours operating on each other's rails. It was estimated that if all the cars of North-South traffic, except those interchanged at interior Illinois and Indiana points, were interchanged at equalized gateways, the cost in official territory would be reduced $797,043, and the costs in southern region would be increased a like amount.

81 There are several weaknesses in this estimate. Initially, equalizing the number of engine-hours performed on the other lines' rails does not equalize interchange service because each carrier performs a major part thereof on its own rails. Secondly, although many important gateways are cited, not all are included, and the proportion of cars passing through unequalized gateways is

not shown. Thirdly, the cost of engine time is not equal in the two territories. There is another, and major, criticism of this proposed adjustment. Rail Form A territorial costs produce a cost which is an average for all the service units in the territory, such as interchange handlings. When greater or lesser costs than Form A costs are assigned to particular items, then lesser or greater costs of corresponding amounts must be assigned to the remaining units. Unless this is done, a situation exists where either more dollars are assigned to all the service units than were actually expended, or only part of the dollars incurred are assigned and some are left over and not assigned to anything. It would create a distortion to assign a cost different than average to 880,711 interchange handlings without a corresponding adjustment in the cost of those remaining. As the northern lines explain:

Another substantial objection to the suggested adjustment is that it would be incomplete. If southern lines are assumed to have incurred interchange costs at the gateways at the rate of $4.045 per interchange as compared with their 1956 Form A average of $3.14, that would necessarily mean that their costs for other interchanges would be reduced by $797,043. Conversely, the corresponding adjustment of northern gateway interchange costs would require an *increase* of the same sum in the costs of other interchanges in official territory. But in proposing the making of such adjustment in respect to this item the southern lines did not attempt to show to what extent their costs of the other interchanges on the traffic involved would be *decreased* or to what extent the northern costs of other interchanges would be *increased*. Further, they presented no such data as would permit the completion of such an adjustment.

For the reasons indicated above, we do not accept the proposed adjustment.

Definitions

Northern lines are defined as those assigned to the eastern district and Pocahontas region, except the Norfolk, Franklin and Danville Railway Company, and include the Toledo, Peoria & Western Railroad Company.

Southern lines are defined as those assigned to the southern region, and, in addition, the lines of the St. Louis-San Francisco Railway Company in southern territory and the line of the Norfolk, Franklin and Danville Railway Company west of Suffolk, Va.

EXHIBIT B

ORDER

At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D. C., on the 3d day of February A. D. 1965.

No. 29885

OFFICIAL-SOUTHERN DIVISIONS
IN THE MATTER OF DIVISIONS OF JOINT RATES BETWEEN OFFICIAL AND SOUTHERN TERRITORIES

No. 29799

AKRON, CANTON & YOUNGSTOWN RAILROAD COMPANY, ET AL.

v.

ABERDEEN & ROCKFISH RAILROAD COMPANY, ET AL.

It appearing, That a full investigation of the matters and things involved in these proceedings has been made, and that the Commission, on the date hereof, has made and filed a report on further hearing containing its findings of fact and conclusions thereon, which said report on further hearing is hereby referred to and made a part hereof:

It is ordered, That the Georgia & Florida Railway Company and the Norfolk, Franklin and Danville Railway Company, be, and they are hereby, made respondents in Docket No. 29885.

It is further ordered, That the complainants, cross-complainants, defendants, and respondents, according as they participate in the transportation, be, and they are hereby, notified and required to establish on or before April 20, 1965, and thereafter to apply, divisions of joint all-rail interstate rates for the transportation of property between points in official territory, on the one hand, and, on the

other, points in southern territory, determined as provided in said report on further hearing.

It is further ordered, That the said complainants, cross-complainants, defendants, and respondents be, and they are hereby, notified and required to cease and desist, on or before April 20, 1965, and thereafter to abstain from asking, demanding, collecting, or receiving divisions of said joint rates upon bases other than those prescribed in said report on further hearing.

It is further ordered, That the order entered herein on January 12, 1953, as amended by order dated May 26, 1953, and the subsequent orders entered herein to the extent such said subsequent orders vacated or modified said order of January 12, 1953, as amended, be, and they are hereby, vacated and set aside as of the date the divisions prescribed in said report on further hearing become effective.

And it is further ordered, That this order shall continue in force until further order of the Commission.

By the Commission.

BERTHA F. ARMES,
Acting Secretary.

UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Application for Interlocutory Injunction and, If Needed, Temporary Restraining Order.

Come now plaintiffs, by their attorneys, with this, their Application for Interlocutory Injunction, and, if Needed, Temporary Restraining Order, and, in support of said application, respectfully state:

1. Under date of February 3, 1965, the Interstate Commerce Commission entered an order prescribing changes in the present divisions of railroad freight rates between the North and the South. The changes would result from the Commission's resolution of two separate issues determined in its report. The order first corrects an error in the formula currently applicable in dividing those rates by removing an excessive terminal allowance which operates to the detriment of the predominantly long-haul Southern railroads. But the order also prescribes an inflation in the divisional factors of the Northern railroads under which the railroads in the North would be accorded 45 percent greater compensation for each terminal service performed, and 10 percent greater compensation for each mile of line-haul service performed than would be accorded railroads in the South (325 I.C.C. at 37). The inflation prescribed for the Northern railroads would accord them $16 million more in revenues per year than they would be entitled to under the uniform divisional scale which results from removal of the terminal allowance found by the Commission to be excessive. The net effect of the Commission's order would be to

impose upon the Southern railroads a revenue loss in an amount found by the Commission to be $7,948,004 per year (325 I.C.C. at 50).

2. The Commission's order dated February 3, 1965, will become effective on April 20, 1965, unless this Application for Interlocutory Injunction and, if needed, Temporary Restraining Order is granted by this Court.

3. The verified complaint filed in this Court by the Southern railroads raises substantial questions with respect to the lawfulness of that part of the Commission's order of February 3, 1965, which prescribes an inflation in the divisional factors of the Northern railroads.

4. This Application seeks: (1) to protect plaintiffs' right to the revenues which would accrue to the Northern railroads as a result of the inflated divisional factors prescribed by the Commission in the event this Court upholds plaintiffs' claim that the Commission acted unlawfully in prescribing such inflation; and, (2) to protect all parties to the litigation from unnecessary and irreparable injury.

5. As shown by the verified complaint, plaintiff Southern railroads will suffer irreparable injury in being subjected to the necessity of a multiplicity of suits and the possibility of a substantial loss in revenues rightfully belonging to them, if the unlawful part of the Commission's order of February 3, 1965, is allowed to go into effect without an express obligation upon the Northern railroads to resettle all revenues received in excess of those which would accrue to them under the divisional scale found by the Commission to be the lawful equal scale in the event this Court should hold that the Commission acted unlawfully in prescribing an inflation for the North.

6. As shown by the verified complaint and by the affidavits of F. A. Luckett, E. Mech, and L. A. Van Nest, marked Affidavits A, B and C, annexed to this Application and made a part hereof, the Southern railroads will suffer

irreparable injury in the form of costly disruptions of their accounting forces even if an express obligation to resettle is imposed upon all the Northern lines, unless the interlocutory injunction order herein prayed for is granted and the *status quo* maintained pending final determination of the prayer of the complaint for a permanent injunction.

7. In order both to protect plaintiffs' right to the revenues represented by the Northern railroads' inflation and to prevent irreparable injury, the *status quo* should be preserved during the pendency of this action and an obligation should be imposed upon both the Northern and the Southern railroads to resettle the revenues in accordance with the ultimate outcome of this action. Under such an arrangement, the Northern railroads would be under an obligation to resettle the revenues to the uniform divisional basis found by the Commission to be proper should the Court uphold plaintiffs' claim that the Commission's order is invalid in part because the prescribed inflation is unlawful. The Southern railroads would be under an obligation to resettle the revenues to the inflated Northern basis prescribed by the Commission should the Court uphold that inflation. If such mutual resettlement obligations are agreed upon or established by the Court, plaintiff Southern railroads ask that the Court maintain the *status quo* by enjoining and suspending in whole the Commission's order of February 3, 1965, pending final determination of this action, subject to appropriate protective conditions applicable to all participating railroads.

8. In the event the Northern railroads do not agree to, or are not subjected to, an obligation to resettle to the uniform divisional basis found by the Commission to be proper, the Southern railroads, to preserve the *status quo* with respect to the contested issue, ask that the order of February 3, 1965, be enjoined in part so that all the railroads will settle the revenues during the pendency of the action under the uniform divisional scale, eliminating the

terminal allowance which the Commission found to be excessive. This injunction would include conditions appropriate to protect the right of the Northern railroads to the revenues represented by the inflation in the event the Commission's order ultimately is upheld.

9. Neither defendants nor the Northern railroads would be harmed in any way by the issuance of either of the interlocutory injunctions prayed for in the alternative above, since, under each alternative, the Southern railroads agree to protective conditions which would guarantee the Northern railroads all revenues to which they would be entitled in the event the Commission's order is upheld.

10. Plaintiffs' principal request here is for an interlocutory injunction. Because only a statutory court of three judges has jurisdiction to issue such an injunction (28 U.S.C. § 2284), plaintiffs also request a temporary restraining order pending hearing and determination of their application for an interlocutory injunction in the event that such hearing and determination cannot be completed by April 20, 1965, when the Commission's order would otherwise become effective.

WHEREFORE, plaintiffs pray:

(1) That an Interlocutory Injunction be granted by a statutory three-judge court appointed pursuant to the provisions of 28 United States Code, Section 2284: (a) maintaining the *status quo*, subject to appropriate protective conditions directed to both the Northern and the Southern railroads, by enjoining defendant United States of America and its agency, the Interstate Commerce Commission, from enforcing or attempting to enforce the order of the Interstate Commerce Commission dated February 3, 1965, in the proceedings before the Commission in I.C.C. Docket Nos. 29799 and 29885, as described in the verified complaint, until hearing and determination of plaintiffs' claim that the part of the Commission's order which would

establish an inflation in the divisional factors of the Northern railroads be set aside; or, in the alternative, (b) enjoining defendant United States of America and its agency, the Interstate Commerce Commission, subject to appropriate conditions imposed upon the Southern railroads, from enforcing or attempting to enforce that part of the order of the Interstate Commerce Commission dated February 3, 1965, prescribing an inflation for the North until hearing and determination of the prayer for permanent relief, thus requiring all parties to settle divisions during the pendency of this action on the basis of the scale found by the Commission to be the lawful uniform divisional scale.

(2) In the event a court of three judges is not convened to hear and act upon the Application for an Interlocutory Injunction prior to April 20, 1965, that a Temporary Restraining Order be granted by a Judge of this Court restraining defendant United States of America and its agency, the Interstate Commerce Commission, from enforcing or attempting to enforce said order of the Interstate Commerce Commission dated February 3, 1965, pending a hearing and determination by the three-judge court of plaintiffs' Application for Interlocutory Injunction.

DATED: March 31, 1965.

(Annexed Affidavits A, B and C omitted in printing)

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing)

Intervening Complaint of the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners to Set Aside in Part the Order of the Interstate Commerce Commission.

Intervening plaintiffs, the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners (hereinafter sometimes referred to as intervening plaintiffs), for statement of their claim against defendants allege:

I.

This is an action to set aside in part an order entered by the Interstate Commerce Commission in administrative proceedings identified as I.C.C. Docket No. 29885, *In the Matter of Divisions of Joint Rates Between Official and Southern Territories,* and I.C.C. Docket No. 29799, *Akron, Canton & Youngstown R. Co., et al. v. Aberdeen and Rockfish R. Co., et al.* The report of the Commission in these proceedings is printed at 325 I.C.C. 1.

II.

The intervening plaintiff Southern Governors' Conference, insofar as their interest in this proceeding is concerned, is composed of the Governors of the States of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina and Tennessee, formed into an association for the principal purpose of furthering the economic development of the South. The intervening

plaintiff Southeastern Association of Railroad and Utilities Commissioners, insofar as their interest in this proceeding is concerned, is composed of the members and member commissions charged with the regulation of common carriers and other public utilities in the same States. The Association regularly appears before the Interstate Commerce Commission and participates in proceedings wherein the interests of the citizens of their States may be affected.

III.

The proceedings before the Interstate Commerce Commission out of which this action arises involved a dispute as to the proper division between the Southern and Northern railroads of the revenues accruing from the movement on joint rates of freight traffic between the North and the South. The existing basis for dividing these rates is an equal-factor scale—that is, a scale which accords the same divisional factor for similar terminal, interchange and line-haul services to both Northern and Southern railroads. This scale was prescribed by the Commission itself in 1953. In prescribing this currently effective equal-factor scale, the Commission expressly relied upon and patterned the scale after the uniform class rate scale which it previously prescribed for application throughout both these territories (287 I.C.C. at 497, 523; see also *Official-Southwestern Divisions,* 287 I.C.C. 553, 578). This uniform class rate scale is still in effect.

IV.

The present proceedings arose when the Northern railroads became dissatisfied with this equal-factor basis of dividing rates and petitioned the Commission to reopen the investigation that resulted in its 1953 order and to prescribe a new basis of divisions which would accord them greater compensation than the Southern lines for the same rail services and thus afford the Northern railroads a simple source of additional revenues.

V.

The Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners intervened in the proceedings before the Commission to oppose the Northern railroads' efforts to destroy the existing equality in divisions between the North and the South. Because both the rail rates to be absorbed by the Southern economy and the rail services available to Southern shippers inevitably depend upon the revenues received by the Southern railroads, this attempt to divert to Northern railroads a disproportionate part of the revenues received from North-South traffic represented a clear threat to the economy of the South. Accordingly, these intervening plaintiffs took the position that the Commission should not abandon the established equal-factor basis of making divisions unless and until it was shown: (1) that the Northern railroads suffer from inherent disadvantages which make it inevitable that transportation costs in that territory will be higher than the costs for similar service in the South; and (2) that the economy of the North is in a poorer position to absorb the burden of such inherently higher costs than the economy of the South.

VI.

In its Report and Order dated February 3, 1965, the Commission unlawfully abandoned the principle of equality in divisions and prescribed a new basis therefor which would force the Southern railroads, Southern shippers and the Southern people to subsidize the transportation system of the North by the payment of inflated divisions for Northern rail service. The basis of divisions prescribed by the Commission represents an inflation in the divisional factors of the Northern railroads to the extent of 45 percent for terminal and border interchange service, and 10 percent for line-haul service (325 I.C.C. at 37).

VII.

The sole basis set forth in the Report of February 3, 1965, to justify these inflations in the divisional factors of the Northern railroads is a finding that the costs of rail service are higher in the North than in the South. This finding is unlawful under the Interstate Commerce Act, the Administrative Procedure Act and the Due Process Clause of the Federal Constitution in at least eight separate respects:

(1) It is not supported by substantial evidence;

(2) It results from an imposition of the burden of proof upon the Southern railroads and these intervening plaintiffs directly contrary to the mandate of the Administrative Procedure Act;

(3) It ignores the established principle of law which requires the party in possession of evidence to come forward with that evidence whenever a material issue is raised requiring such evidence for its resolution;

(4) It is not supported by an adequate statement of "findings and conclusions, as well as the reasons or basis therefor" upon all the material issues necessarily resolved by the ultimate cost finding;

(5) It is in part demonstrably erroneous and contrary to undisputed evidence of record;

(6) It rests in part upon factual data not of record as to which official notice could not be and was not taken in the manner permitted by the Administrative Procedure Act and the Due Process Clause of the Federal Constitution;

(7) It is the product of an unlawful use of the Commission's Cost Section; and,

(8) It fails to give due consideration to the evidence of record with respect to the relative efficiency

of the carriers and the relative importance to the public of maintaining them in their existing form, both of which are factors to which the Commission's attention is expressly directed by Section 15(6) of the Interstate Commerce Act.

VIII.

In placing its reliance upon alleged differences in the relative costs of rail service in the North and in the South, the Commission purported to accept and give effect to the principle that "natural disadvantages must be found in the North before we may increase the divisions of the Northern railroads" (325 I.C.C. at 27-28). But it then proceeded to render this principle meaningless by concluding that "other factors being equal, cost differences generally are the product of, and reflect, the inherent advantages and disadvantages that go to make up the respective overall transportation conditions in the two territories" (325 I.C.C. at 28). This conclusion is unlawful under the Interstate Commerce Act and the Administrative Procedure Act in at least five separate respects:

(1) The Commission's report contains no findings to support such a conclusion;

(2) The record contains no evidence to support such a conclusion;

(3) The undisputed evidence and the Commission's own findings in other parts of its Report are flatly inconsistent with such a conclusion;

(4) The conclusion is expressly based in part upon an unlawful imposition of the burden of proof on these intervening plaintiffs; and,

(5) The Commission's conclusion is not reconciled with, but is flatly contrary to, the National Transportation Policy.

IX.

In prescribing inflated Northern divisional factors to offset allegedly higher costs incurred by the Northern railroads, the Commission simply ignored the question of whether the burden of such costs could more appropriately be placed upon the North, although these intervening plaintiffs had presented an express exception dealing with this question and the question was plainly material under the theory relied upon by the Commission to decide this case. This failure to make any findings at all on this material issue violates Section 8(b) of the Administrative Procedure Act. In the circumstances presented here, the Commission's action was also arbitrary and capricious within the meaning of Section 10(e) of the Administrative Procedure Act, for the record contains no evidence at all to support an imposition of the burden of such higher Northern costs on the South, and, indeed, such action is inconsistent with the Commission's own findings made elsewhere in its Report.

X.

By its terms, the Commission's order of February 3, 1965, is to become effective on and after April 20, 1965. In order to prevent irreparable injury to the parties to this action and an undue waste of money which, from the standpoint of the public, would be better devoted to the improvement of rail service, this Court should enjoin the Commission's order pending the determination of this action, subject to protective conditions sufficient to protect all the parties against the loss of any rights the Court ultimately may uphold.

WHEREFORE, the intervening plaintiffs pray:

1. That the operation, enforcement and execution of the order of February 3, 1965 be enjoined pending the final hearing and determination of this action.

2. That the part of the Order of February 3, 1965 prescribing an inflation for the Northern railroads be permanently set aside.

3. That intervening plaintiffs recover their proper costs.

4. That intervening plaintiffs have such other and further relief in the premises as in equity may be deemed meet and just by this Honorable Court.

Respectfully submitted,

DATED: April 1, 1965. WALTER R. MCDONALD, HURT, HILL & RICHARDSON, and JOSEPH H. KAVANAUGH—By: Robert R. Richardson, Counsel for the Southern Governors' Conference and Southeastern Association of Railroad Utilities Commissioners.

Order Granting Motion for Leave to Intervene as Defendants.

Upon consideration of the motion of The Baltimore and Ohio Railroad Company, Boston and Maine Railroad, The Akron, Canton & Youngstown Railroad Company, The Ann Arbor Railroad Company, Bangor and Aroostook Railroad Company, Belfast and Moosehead Lake Railroad Company, Bessemer and Lake Erie Railroad Company, The Central Railroad Company of New Jersey, Central Vermont Railway, Inc., The Chesapeake and Ohio Railway Company, Chesapeake Western Railway, Chicago & Illinois Midland Railway Company, Chicago South Shore and South Bend Railroad, The Delaware and Hudson Railroad Corporation, The Erie-Lackawanna Railroad Company, Detroit and Mackinac Railway Company, The Detroit and Toledo Shore Line Railroad Company, Detroit, Toledo and Ironton Railroad Company, Elgin, Joliet and Eastern Railway Company, Grand Trunk Western Railroad Company, Illinois Terminal Railroad Company, Indiana Harbor Belt Railroad Company, The Lehigh and Hudson River Railway Company, Lehigh and New England Railroad Company, Lehigh Valley Railroad Company, Maine Central Railroad Company (Richard Joyce Smith, William J. Kirk, Harry W. Dorigan, Trustees), New York, Susquehanna and Western Railroad Company, Norfolk and Western Railway Company, The New York Central Railroad Company, The Pennsylvania Railroad Company, Pennsylvania-Reading Seashore Lines, The Pittsburgh and Lake Erie Railroad Company, The Pittsburgh & West Virginia Railway Company (Norfolk and Western Railway Company, Lessee), Reading Company, Richmond, Fredericksburg and Potomac

Railroad Company, The Staten Island Rapid Transit Railway Company, Toledo, Peoria & Western Railroad Company, Wabash Railroad Company (Norfolk and Western Railway Company, Lessee), Western Maryland Railway Company, Boyne City Railroad Company, Canadian Pacific Railway Company, Central Indiana Railway Company, Chestnut Ridge Railway Company, Chicago & Eastern Illinois Railroad Company, Coudersport and Port Allegany Railroad Company, Canadian National Railways, The Long Island Rail Road Company, The Lorain & West Virginia Railway Company, Maryland and Pennsylvania Railroad Company, The Monongahela Railway Company, Morristown & Erie Railroad Company, Pittsburgh, Chartiers & Youghiogheny Railway Company, The Pittsburgh & Shawmut Railroad Company, Raritan River Rail Road Company, St. Johnsbury & Lamoille County Railroad Company and The Winfield Railroad Company for leave to intervene as parties defendant in the above entitled and numbered civil action, and, in consideration of the fact that movants were parties in interest to the proceedings before the Interstate Commerce Commission, as shown by the report of the Interstate Commerce Commission annexed to and made part of plaintiffs' complaint herein, in which proceedings the order herein complained of was rendered; and that the present action involves the validity of such order and the interest of movants; and that they are, therefore, entitled to intervention as of right under Title 28, United States Code, Section 2323, and Rule 24(a) of the Rules of Civil Procedure for the District Courts of the United States;

It Is Hereby Ordered that the motion for leave to intervene is granted, and that the intervening answer to the complaint and the intervening answer to the Motion for Interlocutory Injunction, and If Needed, Temporary Restraining Order, are accepted for filing and are hereby ordered filed.

New Orleans, Louisiana, this 6th day of April, 1965.

(sgd.) E. Gordon West,
United States District Judge.

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing)

Answer of the Intervening Defendants.

Now into Court come the intervening defendants as herein named in the motion for leave to intervene as defendants, and, in answer to the complaint of Aberdeen and Rockfish Railroad Company et al., allege.

I.

The allegations of Article I do not require answer.

II.

Intervening defendants admit the allegations of Article II.

III.

Intervening defendants admit the allegations of Article III.

IV.

Intervening defendants admit the allegations of Article IV.

V.

Intervening defendants admit the allegations of Article V.

VI.

Answering Article VI, intervening defendants deny the allegations of the first sentence. They aver that this proceeding is solely an action to set aside, enjoin, annul and suspend an order of the Interstate Commerce Commission. Intervening defendants admit the remaining allegations of

Article VI, but aver that a more accurate description of Official and Southern territories is contained in the order of the Interstate Commerce Commission of December 4, 1947, instituting the investigation in its Docket No. 29885 wherein the order here under review was made, and in its report in its Docket No. 28300, Class Rate Investigation, 1939, 262 I.C.C. 447, 457 to which its said order of December 4, 1947 refers.

VII.

Intervening defendants, in answer to the allegations of Article VII, admit that the northern and southern railroads have jointly established many rates and charges with respect to movements of freight between the South and the North, whether pursuant to the mandate of Section 1(4) of the Interstate Commerce Act or otherwise. Intervening defendants do not answer the balance of the allegations of Article VII because the sections of the United States Code pleaded herein speak for themselves.

VIII.

Intervening defendants admit that in 1947, the Commission instituted a general investigation into the lawfulness of the divisions of rates on railroad traffic moving between the North and the South, and further admit as a result of the investigation a uniform scale was prescribed and that this uniform scale is the present basis for dividing joint rates on substantially all freight traffic (excepting coal and coke made from coal) moving between the North and the South. Intervening defendants deny all the balance of the allegations of Article VIII.

IX.

Intervening defendants admit the allegations of Article IX, except that they aver, with respect to the allegation that northern lines did not activate their petition until 1959, that this resulted from the joint request of plaintiffs and intervening defendants upon the Interstate Commerce Com-

mission for an indefinite postponement of the date for reply by southern lines to the northern lines' petition.

X.

Intervening defendants are not called upon to answer the allegation of Article X as the petition and the proceedings pleaded by the plaintiffs are the best evidence of their contents.

XI.

Answering the averments of Article XI, intervening defendants allege that the southern lines, plaintiff herein, asked the Commission to deny the intervening defendants' petition to reopen the proceedings referred to but, after reopening, the said plaintiffs, as a tactical matter, asked for affirmative relief. Intervening defendants admit that the plaintiffs claimed that the initial mileage block of the scale mentioned in Article XI was too high and prejudicial to the southern lines which had longer hauls than northern lines. Otherwise, intervening defendants deny the averments of Article XI.

XII.

Intervening defendants aver, in answer to the allegations of Article XII, that the report and order described in the said article and annexed to the Complaint as Exhibits A and B respectively, are the best evidence of their contents and of the findings of the Commission.

XIII.

Intervening defendants do not feel called upon to answer the allegations of Article XIII for the report of the Commission is the best evidence of the basis of its order and of the facts found therein.

XIV.

Intervening defendants deny the allegations contained in Article XIV.

XV.

Intervening defendants deny the allegations contained in Article XV.

XVI.

Intervening defendants are not called upon to answer Article XVI.

XVII.

Intervening defendants deny all of the allegations of Article XVII.

XVIII.

Intervening defendants deny the allegations of Article XVIII.

Wherefore, intervening defendants pray that, after due proceedings had, the Complaint of Aberdeen and Rockfish Railroad Company et al. be dismissed at plaintiffs' costs.

Richard B. Montgomery, Jr., Edward A. Kaier, Joseph F. Eshelman and Kenneth H. Lundmark, Attorneys for Defendants.

Duly sworn to by George C. LaBree (jurat omitted in printing).

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Answer of Intervening Defendants to Application of Plaintiffs for Interlocutory Injunction and, If Needed, Temporary Restraining Order.

Now into Court come the intervening defendants, through their undersigned attorneys, and, in answer to plaintiffs' Application for Interlocutory Injunction, and If Needed, Temporary Restraining Order, respectfully aver:

1. That the report and order of the Commission are the best evidence of their contents and requirements and otherwise intervening defendants deny the allegation of Article I.

2. Intervening defendants admit the allegations of Article 2.

3. Intervening defendants deny the averments of Article 3.

4. In answer to the averment of Article 4, intervening defendants deny that the plaintiffs are entitled to the relief which it is alleged that they seek by their Application for Interlocutory Injunction and, If Needed, Temporary Restraining Order.

5. Intervening defendants deny the averments of Article 5.

6. Intervening defendants deny the averments of Article 6.

7. Intervening defendants deny the averments of Article 7.

8. Intervening defendants deny that the southern railroads are entitled under any circumstances to the request made in Article 8.

9. Intervening defendants deny the averments of Article 9.

10. The Application for Interlocutory Injunction fails to state any claim upon which such relief can be granted for the reason that the plaintiffs have neither alleged nor proven the requirements for an injunction; namely: (1) the likelihood that the petitioner will prevail on the merits of the appeal; (2) irreparable injury to the petitioner: (3) no substantial harm to other interested parties; (4) no harm to the public interest.

11. The question of staying the effect of the Commission's order presents four different aspects from an accounting standpoint:

(a) If the Commission's order were not stayed and were thereafter sustained, no extra accounting work would be occasioned.

(b) If the order were stayed and thereafter invalidated, no extra accounting work would be necessary.

(c) If there were no stay and the order were later held invalid, northern lines would have to resettle accounts on the basis of the present divisions.

(d) If the order were stayed but were later found valid by the Court, the carriers would have to resettle accounts to the basis of divisions prescribed in the Commission's order.

(The facts with respect to the foregoing four points will be further established in affidavits to be filed before hearing).

The possibility of additional accounting expense, therefore, is present whether the order is stayed or not. Moreover, it is the delivering line which is required to make settlement and to assume the burden of the accounting in connection therewith. This burden falls more heavily upon northern lines than upon southern lines, since 53.9% of the traffic moving between the North and the South is northbound as against 46.1% southbound, these figures having been taken from the plaintiffs' traffic study.

Again, in this connection it should be remembered that a strong presumption of validity attaches to the order. *Carolina Scenic Coach Lines v. United States,* 326 U. S. 680, 66 Sup. Ct. 37. In view of this presumption, it is clear that the avoidance of additional accounting work would most likely be realized by not staying the Commission's order.

The elements required to be established as a condition to the issuance of an interlocutory injunction or temporary restraining order staying the effectiveness of an order of an administrative body are well established. They are:

(i) A likelihood that the Petition will prevail on the merits of the appeal.

(ii) Irreparable injury to the mover unless the stay is granted.

(iii) No substantial harm to other interested parties,

(iv) No harm to the public interest. *Covington v. Schwartz,* 230 Fed. Supp. 249, at page 52; *Associated Securities Corporation v. S. E. C.,* (10th Circuit) 283 Fed. 2d 773; *Eastern Air Lines v. C. A. B.,* (2nd Circuit) 261 Fed. 830; *Acme Fast Freight, Inc., et al. v. United States of America,* 135 Fed. Supp. 823; *Virginia Petroleum Job Association v. Federal Power Commission,* 259 Fed. 2d 921.

a) Plaintiffs do not allege or otherwise seek to establish that issuance of an interlocutory injunction will not be harmful to the public.

b) Plaintiffs do not allege or endeavor to establish that these intervening defendants will not be subject to irreparable injury if an interlocutory injunction is issued. In fact, plaintiffs' proffer of protective conditions seeks to *protect plaintiffs* by imposing upon intervening defendants additional burdens and obligations in the event an interlocutory injunction were to issue. Moreover, the nature and extent of injury threatened to intervening defendants will be set forth in affidavits to be filed before hearing.

c) It is incumbent upon the plaintiffs to show, as a condition of the granting of a temporary restraining order or interlocutory injunction, that they probably would prevail on the merits on final determination of this case by the Court. This they have failed to do or even to attempt.

d) It is likewise incumbent upon plaintiffs to show that they would be irreparably injured unless the said order is granted. This requirement is not satisfied by a mere claim of added cost for establishing a different accounting system, particularly where intervening defendants will suffer a detriment in that they will be denied, for an indefinite period, substantial funds otherwise due them.

A recent case involving the application of these principles to the question of whether or not a stay should be issued against an order of the Interstate Commerce Commission fixing divisions is *Carolina and Northwestern Railway Company v. United States,* 230 Fed. Supp. 581. There, the plaintiff, in moving for a temporary restraining order, relied upon additional accounting costs to establish irreparable injury. With respect to this, the Court stated:

> "If this be deemed irreparable injury, it is counterbalanced by the detriment to L & N which will result from delaying payments otherwise due L & N at the estimated rate of approximately $49,000.00 per month. Interest on such amount is not disclosed but would appear to be substantial. Whether interest could or would be allowed by the three-judge court to be convened is a matter of conjecture."

Again, the Court stated:

> "Plaintiff has shown no probability of ultimately prevailing and no likelihood of irreparable injury that outweighs the detriment that may result to the party who would be denied relief by the entry of a restraining order. Comparison of injuries to the parties is a sounder approach than trying to weigh the likelihood of success. But neither criterion operates in this case to make the issuance of a restraining order equitable."

The Court denied the motion for a temporary restraining order, but provided "that the denial of the foregoing motion, with the consent of the L & N, is conditioned upon the following:

> "1. That in the event plaintiffs are successful in perpetually enjoining and permanently setting aside the Order of the Interstate Commerce Commission of September 11, 1963, as modified by its Order of March 4, 1964, intervening defendant, the Louisville and Nashville Railroad Company, will resettle its accounts with the Southern Railway Company, et al., defendants in the proceedings before the Commission, on the traffic covered by the orders of the Commission on the basis of the present divisions on all shipments made on and after April 27, 1964, with interest at the rate of six per cent per annum on the monthly differences between the two divisional bases from the customary accounting monthly settlement dates.
>
> "2. The question whether and to what extent the intervening defendant may be required to bear the accounting change-over expense of the plaintiffs in the event plaintiffs are successful in perpetually enjoining and permanently setting aside the Interstate Commerce Commission's orders aforesaid is reserved by the court for further consideration when and if appropriate.
>
> "See: Barron & Holtzoff, Federal Practice and Procedure, Sections 1432 and 1433; Acme Fast Freight, Inc.

v. United States, 135 F. Supp. 823 (D. C. Del. 1955); Cincinnati, New Orleans & Texas Pacific Railway Co. v. United States, 220 F. Supp. 46 (S. D. Ohio 1963)."

Defendants, therefore, aver that there can be no doubt but that in the *Carolina and Northwestern Railway* case, the order changing divisions was permitted to go into effect subject to an obligation upon the intervening defendant to protect the plaintiffs.

A like course was followed by the District Court for the District of Colorado in *Atchison, Topeka and Santa Fe Railway Company, et al. v. U. S.*, wherein, in an action brought to set aside an order of the Interstate Commerce Commission prescribing new divisions, the Court denied an application for an interlocutory injunction, but imposed conditions on the eastern intervening defendants which are shown by its unreported order, a copy of which is appended hereto.

It is respectfully submitted that, under all the facts and authorities cited above, the course pursued in the *Carolina and Northwestern* case and by the Colorado District Court in *Atchison, Topeka and Santé Fe* is the course which should be followed here.

Defendants aver that the case of *Transcontinental Divisions, Atchison, T. & S. F. Ry. Co. v. U. S.* (No. 63-745 EC), S. D. Calif., is a case which will be relied upon by the plaintiffs. The Court, in that case, entered a temporary restraining order and thereafter a judgment of interlocutory injunction with conditions to protect the intervening defendants. In that instance, however, the eastern intervening defendants were in a position to make offer of resettlement only with respect to the divisions covered by their own complaint, and the mid-western intervening defendants, which were likewise parties to the joint rates involved, did not make any similar offer to the Court.

In the present controversy, however, all the eastern (northern) lines which make interline settlements are before the Court and are willing to accept conditions similar

to the ones imposed in the Colorado case or those imposed in the *Carolina & Northwestern* case.

Accordingly, the motion for an interlocutory injunction or, in the alternative, a temporary restraining order, should be denied.

WHEREFORE, intervening defendants pray that the application for a temporary restraining order and interlocutory injunction be denied, that the remainder of the prayer of plaintiffs be denied, and that this proceeding be dismissed at plaintiffs' cost.

ORDER DENYING MOTION OF PLAINTIFFS AND INTERVENING PLAINTIFFS FOR INTERLOCUTORY INJUNCTION.

(Attached to preceding Answer.)

THIS CAUSE, coming on to be heard this 19th day of December, 1962, before the full court of three Judges, sitting as a District Court, all parties appearing by their counsel of record, the Court having heard counsel, having considered the evidence presented and being fully advised in the premises,

DOTH HEREBY ORDER:

(1) That the Motion of Plaintiffs and Intervening Plaintiffs for an Interlocutory Injunction suspending and restraining the operation enforcement and execution of the order of the Interstate Commerce Commission dated May 7, 1962, as modified by its order of November 19, 1962, be and it hereby is denied.

(2) Such denial of the foregoing motion is conditioned upon the following conditions, to which Intervening Defendants, Eastern Lines, agreed in open court:

In the event Plaintiffs are successful in perpetually enjoining and permanently setting aside the order of the Interstate Commerce Commission of May 7, 1962, as modified by its order of November 19, 1962:

1. Intervening Defendants The Baltimore and Ohio Railroad Company, et al., for themselves and other Eastern railroads making interline settlements, will resettle their accounts with Western Railroads Defendants in the proceedings before the Commission (whether or not parties to this action) on the traffic covered by the order of the Commission (including traffic as to which they are intermediate carriers) on the basis of the present divisions on all shipments made on and after December 23, 1962, with interest at the rate of 6% per annum on the ~~monthly~~ differences between the two divisional bases from the customary monthly settlement dates. In such event resettlement shall be made within sixty days of the final determination of this case.

2. Intervening Defendants The Baltimore and Ohio Railroad Company, et al., shall be required to reimburse Plaintiffs, Intervening Plaintiffs and all other Western railroads for their reasonable expenses incurred in their accounting change-overs.

DONE in open Court this 21st day of December, 1962.

NEW ORLEANS DIVISION

(Title omitted in printing.)

Answer of Intervening Defendants to Intervening Complaint of the Southern Governors' Conference et al.

Intervening defendants The Baltimore and Ohio Railroad Company et al., for their answer to the intervening complaint of the Southern Governors' Conference et al., allege:

I.

The allegations of Article I do not require answer.

II.

Intervening defendants admit the allegations of Article II.

III.

Answering Article III, intervening defendants deny the allegations of the first sentence. They aver that this proceeding is solely an action to set aside, enjoin, annul, and suspend an order of the Interstate Commerce Commission. Intervening defendants admit that in its Docket No. 29885 et al. it made its initial report on January 12, 1953 (287 I. C. C. 497) and its order of the same date, wherein it prescribed certain scales of divisional prorating factors, including a so-called equal-factor scale for use by both northern and southern carriers on the traffic specified in said report and order, which report and order are the best evidence of their contents and of the findings of the Commission. For answer to the last sentence of Article III, inter-

vening defendants crave leave to refer to tariffs on file with the Interstate Commerce Commission for a more accurate statement of what class rates are presently in effect. Otherwise, the allegations of Article III are denied.

IV.

Intervening defendants deny the allegations contained in Article IV.

V.

Answering the averments of Article V, intervening defendants admit that intervening plaintiffs the Southern Governors' Conference and the Southeastern Association of Railroads and Utility Commissioners intervened in the proceedings before the Commission which resulted in its order here under review. The position of these intervening plaintiffs as interveners in the proceeding before the Commission is a matter of record therein. Otherwise, intervening defendants deny the averments of Article V.

VI.

Intervening defendants deny the allegations contained in Article VI.

VII.

Intervening defendants deny all the allegations of Article VII.

VIII.

Intervening defendants aver, in answer to the allegations of Article VIII, that the report and order annexed to the complaint as Exhibit A and B, respectively, are the best evidence of their contents, of the findings of the Commission, and of the basis for its action. Otherwise, intervening defendants deny the averments of Article VIII.

IX.

Intervening defendants deny the allegations contained in Article IX.

X.

Answering the averments of Article X, intervening defendants admit that by its terms the Commission's order of February 3, 1965, is to become effective on and after April 20, 1965. Intervening defendants otherwise deny the averments of Article X, and aver that enjoining or staying the Commission's order pending the determination of this action, even subject to protective conditions, would work irreparable injury to themselves.

Wherefore, intervening defendants pray that after due proceedings had, the intervening complaint of Southern Governors' Conference, et al. be dismissed at intervening plaintiffs' costs.

RICHARD B. MONTGOMERY, JR., EDWARD A. KAIER, JOSEPH F. ESHELMAN, and KENNETH H. LUNDMARK, Attorneys for Intervening Defendants.

(Title omitted in printing.)

Temporary Restraining Order.

This cause came on to be heard on plaintiffs' application for a Temporary Restraining Order pending the hearing of plaintiffs' application for an Interlocutory Injunction by a three-judge court to be convened pursuant to Section 2284 of Title 28 of the United States Code. This Court specifically finds, based upon plaintiffs' verified complaint, and the affidavits of F. A. LUCKETT, E. MECH and L. A. VAN NEST, that defendants are threatening to enforce the order of the Interstate Commerce Commission dated February 3, 1965, as of its effective date of April 20, 1965, and will continue to do so unless restrained by order of this Court, and that if a Temporary Restraining Order is not granted, immediate and irreparable damage will result in the form of costly disruptions of plaintiffs' accounting staffs.

NOW, THEREFORE, IT IS HEREBY ORDERED that pending the hearing and determination of plaintiffs' application for an Interlocutory Injunction by a three-judge statutory court, the United States of America and its agency, the Interstate Commerce Commission, are restrained from enforcing or attempting to enforce the order of the Commission dated February 3, 1965, in the proceedings before the Commission in its Docket Nos. 29885 and 29799, as described in plaintiffs' verified complaint, which order would become effective by its terms on April 20, 1965.

Nothing in this Temporary Restraining Order shall preclude the three-judge statutory court, in granting or

denying plaintiffs' Application for an Interlocutory Injunction, from specifying terms and conditions to be applicable to the division of rates on Official-Southern freight shipments effective on and after April 20, 1965.

This Temporary Restraining Order is on condition that a bond be filed by plaintiffs herein in the sum of $50,000.00 as security for the payment of such costs and damages as may be incurred or suffered by any party.

DATED this 12th day of April, 1965.

E. GORDON WEST,
United States District Judge.

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Joint Answer of the United States of America and the Interstate Commerce Commission.

The United States of America and the Interstate Commerce Commission, defendants herein, answer the complaint as follows:

I.

Admit the allegations contained in paragraphs I, II, III, IV, and V.

II.

Admit the allegations contained in paragraph VI but aver that this is a judicial review action seeking to set aside, enjoin, annul and suspend an order of the Interstate Commerce Commission prescribing just, reasonable and equitable divisions on freight traffic moving by rail between Official and Southern territories.

III.

Admit the allegations contained in paragraph VII but refer to 49 U. S. C. 1(4) and 15(6) for a complete, true, and accurate statement of their content.

IV.

With respect to the allegations contained in paragraph VIII, admit only that as a result of an investigation instituted in 1947, the Commission entered an order in 1953 prescribing a uniform scale of divisional factors which is the present basis for dividing the joint rates in question on all freight traffic except coal and coke made from coal.

V.

Admit the allegations contained in paragraph IX but aver that the delay in activating the petition to reopen the proceedings resulted from a joint request of the parties to indefinitely postpone the date for reply thereto by the Southern lines.

VI.

With respect to the allegations contained in paragraph X, admit only that the Northern lines generally sought increases in their divisions, but refer to their petition and the administrative record for a true, complete, and accurate statement of such request.

VII.

With respect to the allegations contained in paragraph XI, admit only that plaintiffs opposed reopening of the proceedings and thereafter sought affirmative relief claiming the existing scale of divisions to be in violation of the provisions of Section 15(6) of the Interstate Commerce Act for numerous reasons, including the claim that the initial mileage block was too high and prejudicial to the Southern lines.

VIII.

With respect to the allegations contained in paragraph XII, admit only that on February 3, 1965, the Commission made and entered its report and order and served the same on March 2, 1965, which set an effective date of April 20, 1965, but refer to said report and order for a true, complete, and accurate account of their content.

IX.

With respect to the allegations contained in paragraph XIII, aver that the characterizations of the Commission's report and order referred to do not require answer since said report and order are the best evidence of the basis for the Commission's action and refer thereto for a true, complete, and accurate account of the basis of said order and the findings made therein.

X.

Deny the allegations contained in paragraph XIV.

XI.

With respect to the allegations contained in paragraph XV, deny that in furnishing advice to the Commission the Cost Finding Section resorted to factual data, and assumptions with respect to factual data, not contained in the record.

XII.

Admit the allegations contained in paragraph XVI.

XIII.

Deny the allegations contained in paragraphs XVII and XVIII.

WHEREFORE, defendants pray that the relief sought in the complaint be denied and that the complaint be dismissed with costs.

WILLIAM H. ORRICK, JR., Assistant Attorney General; JOHN H. D. WIGGER, Attorney, Department of Justice, Washington, D. C.; LOUIS C. LACOUR, United States Attorney, United States Court House, New Orleans, La., Attorneys for the United States of America.

Order Denying Application of Plaintiffs and Intervening Plaintiffs for an Interlocutory Injunction and Dissolving the Temporary Restraining Order.

This cause, coming on to be heard this 27th day of May, 1965, before the full court of three judges, sitting as a district court, all parties appearing by their counsel of record, and the Court, having heard counsel and having considered the evidence presented and being fully advised in the premises, hereby orders,

1. That the application of plaintiffs and intervening plaintiffs for an interlocutory injunction suspending and restraining the operation, enforcement, and execution of the order of the Interstate Commerce Commission dated February 3, 1965, be and it is hereby denied.

2. The temporary restraining order granted by Judge West on April 12, 1965, be and it is hereby dissolved; and the order of the Interstate Commerce Commission dated February 3, 1965 is deemed to be effective for all purposes as of and from April 20, 1965.

3. The foregoing denial of the application for interlocutory injunction and dissolution of the temporary restraining order is subject to the following conditions, to which the intervening defendants, The Baltimore and Ohio Railroad Company et al., have agreed by filing written consent with the Clerk of this Court:

A. In the event the plaintiffs are successful in permanently setting aside the order of the Interstate Commerce Commission of February 3, 1965, intervening defendants, The Baltimore and Ohio Railroad Company et al., will resettle their accounts with plaintiffs, on traffic covered by the order of the Commission, on the basis of the present divisions, on all shipments made on and after April 20, 1965, with interest at the rate of 5% per annum on the monthly differences between revenues based upon the divisions prescribed by the Commission and revenues based upon the divisions now in effect, the said interest to be calculated from the customary accounting monthly settlement dates.

B. In the event the plaintiffs are successful in permanently setting aside the order of the Interstate Commerce Commission of February 3, 1965, insofar as it prescribes the scale bases of divisions set forth in columns 1 through 4 and in column 6 of Appendix C of its report of that date on further hearing (325 I. C. C. 1, 51-53, 82), and in addition are successful in securing an ultimate judicial determination that there then remains, as a severable part of the Commission's order, a decision by the Commission that the present divisional scale as reduced by 37 integers constitutes the divisional scale found by the Commission to be the lawful equal scale in the event this Court should hold that the Commission acted unlawfully in prescribing the aforesaid scales set forth in said Appendix C, intervening defendants, The Baltimore and Ohio Railroad Company et al., will readjust their accounts with plaintiffs to the said basis of the present scale minus 37 integers as to all shipments made on and after April 20, 1965, with interest at 5 per cent per annum on the monthly differences between revenues based upon the aforesaid scales set forth in said Appendix C and revenues based upon such present scale less 37 integers in each instance, the said interest to be calculated from the customary accounting monthly settlement dates.

C. Upon the happening of the event specified in paragraph A or that specified in paragraph B hereof, intervening defendants, The Baltimore and Ohio Railroad Company et al., shall be required to reimburse plaintiffs for their reasonable expenses for accounting change-overs incurred as a result of this denial of the application for interlocutory injunction.

D. In making the undertaking set forth in paragraph B above, the intervening defendants do not concede that the Court has jurisdiction, upon determining that the Commission's order prescribing the scales set forth in said Appendix C is unlawful, to establish divisions on any basis not prescribed by the Commission.

Dated June 3rd, 1965, at New Orleans, Louisiana.

/s/ JOHN MINOR WISDOM,
United States Circuit Judge.

/s/ EDWIN F. HUNTER,
United States District Judge.

/s/ E. GORDON WEST,
United States District Judge.

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Supplemental Complaint to Set Aside in Part Supplemental Report and Order of the Commission on Further Consideration.

Plaintiffs in the above-entitled action, through their attorneys, for further statement of their claim against defendants, respectfully allege:

I.

On March 2, 1965, the Commission issued its report and order dated February 3, 1965, in an administrative proceeding identified as I.C.C. Docket No. 29799, *Akron, Canton & Youngstown Railroad Co., et al. v. Aberdeen and Rockfish Railroad Co., et al.* and I.C.C. Docket No. 29885, *In the Matter of Divisions of Joint Rates Between Official and Southern Territories.*

II.

On March 31, 1965, plaintiff Southern railroads filed this action to set aside in part this order of the Interstate Commerce Commission.

III.

On April 1, 1965, plaintiff Norfolk Southern Railway filed a petition for reconsideration with the Commission limited to the divisions prescribed for certain portions of its traffic which were not brought in issue in this action; no Southern railroad nor any other party to the proceeding before the Commission filed a petition for reconsideration with respect to the part of the Commission's order which is involved in this action.

IV.

On May 21, 1965, the Commission issued its Supplemental Report and Order of the Commission on Further Consideration (reported at 325 I.C.C. 449), which report and order have been marked as Exhibit A and annexed to this Supplemental Complaint and made a part hereof. In its Supplemental Report, the Commission first disposed of the problems raised by the Norfolk Southern's petition for reconsideration. It then proceeded, on its own motion, to deal with certain matters involved in this court action, which, the Commission said, had "been brought to our attention" (325 I.C.C. at 453):

(1) The Commission quoted an allegation made in Paragraph XIV of the Complaint here with respect to its failure to make findings relating the evidence of record to the cost factors used in the divisional scales it prescribed, and it then attempted to cure this defect by setting forth such findings in an Appendix to the Supplemental Report.

(2) The Commission also took note of plaintiffs' allegation in Paragraph XIV of the Complaint here that the divisions prescribed would reduce their revenues by $8,745,000 a year instead of the $7,948,004 reduction found by the Commission in the original report, but found that even assuming such a mistake of fact to have been made in its original report, it "does not warrant a change in our findings" (325 I.C.C. at 454). Further check of the record shows that the $8,745,000 figure should read $8,838,467.

(3) The Commission concluded its supplemental report with a vague paragraph apparently directed at plaintiffs' contention in this Court that the prescription of an inflation for the Northern railroads in its original order is separable from its determination that the present equal-factor basis has defects which unlawfully depress the revenues of the long-haul carrier (Complaint, Paragraphs XI

and XII); the Commission's supplemental report reiterates the fact that these two aspects of its decision involved essentially different considerations connected only by the fact that they arose in the same proceeding, and the report contains no finding that the two aspects are inseparable.

V.

The Commission's supplemental report was accompanied by an order in which it disposed of the Norfolk-Southern problems and then went on to provide (325 I.C.C. at 455):

> "*It is further ordered,* That our prior report and order herein, dated February 3, 1965, and served March 2, 1965, except as modified and amplified in said supplemental report on further consideration be, and it is hereby, affirmed in all respects and together with this order, subject to the above-mentioned restraining order of the court, shall continue in force until further order of the Commission."

VI.

The quoted portion of the Commission's order is unlawful on all of the grounds specified in the original complaint in this action, and on the additional grounds:

(1) That the supplemental report and order constitute an effort by the Commission to cure the defects in its original order and thus to thwart judicial review of that order in violation of the Due Process Clause of Amendment V of the Federal Constitution, the principle of separation of powers of the Federal Constitution, and the principle of separation of functions of the Administrative Procedure Act.

(2) That the supplemental report and order fail to cure the defects toward which they were directed.

(3) That there is neither substantial evidence nor rational findings to support the conclusion that the mistake

of fact made in the original report with respect to the impact of the new divisions could make no difference in the outcome of the case.

VII.

The record shows that the revenues of the Northern railroads under the prescribed divisions would be $230,209,407 a year, as compared to their revenues under the previously existing basis of divisions of $221,370,940 a year. The revenues of the Northern railroads under the equal-factor scale prescribed by the Commission in 1953, deducting the 37 integers found by the Commission to be excessive, would be $213,945,163 a year.

WHEREFORE, plaintiffs pray:

(1) That the part of the Commission's supplemental report and order of May 18, 1965, which purports to deal with matters at issue in this action, be set aside and held for naught;

(2) That plaintiffs recover their proper costs;

(3) That plaintiffs have such other and further relief in the premises as in equity may be deemed meet and just by this Honorable Court.

PHELPS, DUNBAR, MARKS, CLAVERIE & SON, ASHTON PHELPS, JACK M. GORDON, SIDLEY, AUSTIN, BURGESS & SMITH, DOUGLAS F. SMITH, HOWARD J. TRIENENS, GEORGE L. SAUNDERS, JR.—signed by ASHTON PHELPS.

Of Counsel: JOHN W. ADAMS, PHIL C. BEVERLY, JAMES A. BISTLINE, H. T. COOK, R. WRAY HENRIOTT, HOWARD D. KOONTZ, JOHN E. MCCULLOUGH, DONAL L. TURKAL, ARTHUR J. WINDER.

Exhibit A to Supplemental Complaint—Supplemental Report and Order of the Commission on Further Consideration, May 18, 1965.

INTERSTATE COMMERCE COMMISSION

No. 29885 [1]

OFFICIAL-SOUTHERN DIVISIONS

IN THE MATTER OF DIVISIONS OF JOINT RATES BETWEEN OFFICIAL AND SOUTHERN TERRITORIES

Decided May 18, 1965

Upon petition of Norfolk Southern Railway Company, proceedings as they relate to specified traffic of that carrier reopened for reconsideration and findings modified accordingly. In all other respects, upon further consideration and amplification, findings in prior report, 325 I.C.C. 1, prescribing new just, reasonable, and equitable divisions of joint interterritorial rates between official and southern territories affirmed.

Appearances as shown in prior report.

SUPPLEMENTAL REPORT AND ORDER OF THE COMMISSION ON FURTHER CONSIDERATION

FREAS, *Commissioner:*

In the prior report herein [2] at 325 I.C.C. 1, we found, upon further hearing, that the existing divisions of joint interterritorial rates between official and southern territories were unjust, unreasonable, and inequitable. Just, reasonable, and equitable divisions were prescribed. Subsequently, on April 12, 1965, in civil action No. 15454, Aberdeen and Rockfish Railroad Company, et al. v. United

1. This report also embraces No. 29799, Akron, Canton & Youngstown Railroad Company, et al. v. Aberdeen & Rockfish Railroad Company, et al.

2. Referred to and made a part hereof.

States, the United States District Court for the Eastern District of Louisiana, New Orleans Division, the Honorable E. Gordon West, entered an order temporarily restraining our order prescribing the aforesaid divisions from taking effect on April 20, 1965. Such action had the effect of temporarily mooting the request in the petition of the Norfolk Southern Railway Company, filed April 1, 1965, for
450 postponement of the said effective date pending determination of its request for reconsideration of the report and order insofar as it affects "traffic moving between points on Norfolk Southern and points in official territory via the gateway of Norfolk, Virginia."

Since the enactment of section 15(6) as part of the Transportation Act of 1920, it has been our policy in interterritorial divisions cases to employ a group method or system of determining just, reasonable, and equitable divisions. Because of the number of carriers and the numerous rates and divisions involved, the actual necessities of procedure and administration have required the adoption of such a method in order to accomplish the task imposed upon the Commission by Congress. *New England Divisions Case*, 261 U. S. 184, 196-9 (1923). To avoid serious injustice to any carrier, our procedures permit any railroad to be excepted from a group order, in whole or in part, on a proper showing of differing circumstances. Where it is demonstrated by competent and reliable evidence that a carrier's financial or revenue needs situation requires the preservation of its share of the joint rates on the same level as presently existing or at a level different than that to be maintained for the group as a whole, we may provide special individual treatment in order to maintain such carrier as part of the Nation's transportation system without regard to its costs of rendering the service.

On the basis of such a special showing by the Norfolk Southern, we conclude in our prior report that to prescribe divisions for Norfolk Southern's originated and terminated traffic moving through the Norfolk gateway on the same basis as prescribed for other southern carriers in finding 2

would place that carrier in a deficit position so serious as to impair the rendering of adequate and continuous service to the public. Accordingly, our findings in the prior report, 325 I.C.C. 1 at pages 44, 51-52, sought to retain for the Norfolk Southern a percentage of revenue substantially the same as it presently receives on such traffic. A special scale was prescribed in column 5 of appendix C which increased the column 2 factors applicable to other southern carriers by 108 percent in order to give the Norfolk Southern approximately the same total revenue it now enjoys on shipments originating or terminating on its line and moving via the Norfolk gateway. We constructed column 5 on the basis of the only available evidence of record concerning an average haul formula which the Norfolk Southern urged would produce reasonably reliable results and achieve the end sought.

451 In its petition for reconsideration, however, the Norfolk Southern now asserts that the prorating factors of column 5 fail to preserve its revenue from the traffic in question by a substantial margin estimated to be $106,000 annually ($89,160 from general traffic and $17,699 from perishable traffic). This total amount is computed by expanding to an annual basis the application of the prescribed column 5 factors to waybills of all individual shipments of general traffic moving during the months of March 1958 and November 1959, and for perishable traffic moving during the 1959 season, the latter being admittedly incomplete and preliminary. Although these waybills covering individual shipments constitute the underlying data for the Norfolk Southern's traffic study, they are not of record in these proceedings. Petitioner makes no request to reopen the proceedings for further hearing for the purpose of introducing this evidence in the form of a more detailed study which would provide a more accurate means of constructing a special scale of prorating factors to preserve its *status quo*. It merely requests reconsideration and revision of the column 5 scale by the addition of 15 integers to each prorating factor in each mileage block of that scale.

Under the circumstances, it would ordinarily be improper for the Commission to base any supplemental order increasing the prorating factors in column 5 of appendix C on extra record facts. Moreover, the facts now relied upon by the Norfolk Southern are not based upon newly discovered evidence and, as such, fail to meet the appropriate test as specified in *Yourga v. United States,* 191 F. Supp. 373, 376-7 (W. D. Pa. 1961). The Norfolk Southern's petition merely represents a change in theory from that originally urged as a reliable method of constructing a scale of divisional factors which would preserve its *status quo.* Generally, all carriers subject to regulation under the provisions of the Interstate Commerce Act should be admonished against piecemeal trials. *Cf. Mechling Barge Line, Inc. v. United States,* 376 U. S. 375, 383-386 (1964). Ordinarily, any attempt to have the Commission revise its findings in response to a theory different from that originally urged by a party and adopted by the Commission tends to frustrate the administrative process and should not be countenanced in the absence of unusual circumstances. There is, however, such a circumstance present here which requires consideration.

In reply to the Norfolk Southern's petition, the northern lines assert:

> 452 Notwithstanding the insufficiency of the facts alleged in the petition to support the reconsideration or order sought, the Eastern railroads respondent herein, in order to simplify the issues in the said Court action, and to secure the prompt establishment of a uniform, simple, and readily applicable basis of divisions on the Norfolk gateway traffic originated or terminated by the Norfolk Southern, without prejudice to their position otherwise, and fully reserving their rights to apply for modification thereof as conditions may warrant, hereby consent to modification of the Commission's report and order of February 3, 1965, so as to increase, by 15 integers, each of the

factors contained in Column 5 of Appendix C of the Commission's said report (325 I.C.C. 82).

We consider this consent of the northern lines to be, in effect, an agreement with the Norfolk Southern concerning divisions on the Norfolk gateway traffic under discussion. The question is whether we should modify our findings and the column 5 scale to include an additional 15 integers in each factor thereof in view of the incomplete state of the record. Divisions cases are in the nature of contractual disputes between carriers. Here, as elsewhere in the law, settlements should be encouraged. *Cf.* Administrative Procedure Act, section 5(b). Since the parties themselves are in agreement,[3] we see no reason to object to this course of action. From all that appears, the basis agreed to reflects a reasonable accord. We therefore approve the agreement as just, reasonable, and otherwise equitable. We further find that the northern lines' consent to an increase of each of the prorating factors in column 5 of appendix C by 15 integers warrants modification of that scale at this time to reflect the agreement of the parties concerned. The ends of justice would be better served by incorporating such agreement in our findings which, all parties agree, place the Norfolk Southern's divisions on a systematic basis for the first time by prescribing a modernized scale of divisional factors. As usual, the parties will be permitted to apply for modification thereof as conditions may warrant.

It should be noted, however, that the restraining order issued on April 12, 1965, in the pending court action enjoins our prior order from taking effect on April 20, 1965, with respect to all divisional scales prescribed, pending hearing and determination of an application for interlocutory injunction by the three-judge statutory court. Various protective conditions concerning repayment on the prescribed bases back to April 20, 1965, are offered in the

3. A circumstance rather unusual, unfortunately, in interterritorial divisional proceedings.

event of either a grant or a denial of the interlocu-
453 tory injunction. Under the circumstances, our order herein prescribing an increase in the prorating factors of the column 5 scale for the Norfolk Southern will be effective from the date therein specified. However, actual settlement on the basis of the new divisions shall be postponed pending decision of the court on the application for interlocutory injunction and, thereafter, shall be governed by the court's order granting or denying said injunction and any protective payback conditions which may be imposed therein.

Insofar as the complaint in the pending court action is concerned, it has been brought to our attention that it alleges, *inter alia*, the following:

> The Commission's report contains no findings which relate to evidence of record the specific cost factors used in the construction of the divisional scales which it prescribed. Plaintiffs are unable to trace these cost factors to evidence in this record. From the record, it can be calculated that the application of the divisional scales prescribed by the Commission would reduce the revenues of the Southern railroads by $8,745,000.

Had this allegation been made by the filing with us of an appropriate petition as is plaintiffs' right, it would have been given full and proper consideration. In any event, we deem it to be in the public interest, and indeed our duty, to make our position and findings as clear and specific as possible insofar as the aforesaid matters are concerned.

Turning first to the allegation that the prior report contains no findings which relate to evidence of record the specific cost factors used in the construction of the divisional scales prescribed, we will amplify our prior discussion at 325 I.C.C. at pages 24-26 and 34-38. Specifically, the appendix hereto demonstrates, in detail, with appropriate references to the record, the manner of the construction of the scales. The fully distributed cost factors

used are clearly shown as are the mathematics of their utilization. Reading the aforesaid discussion in light of this appendix, it is clear that the cost scales are based solely on evidence of record and are directly related to the specific cost factors involved. In so finding, we affirm our prior conclusions.

With regard to the asserted reduction in the revenue of the southern railroads by $8,745,000, the prior report indicated a difference of $7,948,004 as a reduction for the southern lines and as a gain for the northern lines. 325 I.C.C. at page 50. Our prior figure represented an overall estimate relating and applying the percentage of costs to the total revenue involved. To the extent that the
454 higher figure now urged by southern lines may reflect a more detailed picture when related to past individual movements, it does not warrant a change in our findings. The scales prescribed still reflect the restated costs of record and, for the reasons indicated in the prior report, can properly serve here as a guide for the determination of just, reasonable, and equitable divisions. *Cf. Louisville & N. R. Co. v. Southern Ry. Co.*, 319 I.C.C. 639, 657-658, sustained in *Carolina & N. W. Ry. Co. v. United States*, 230 F. Supp. 581 (W.D. N.C. 1964), affirmed *per curiam* by the Supreme Court on April 26, 1965, 33 L.W. 3349.

In rejecting the old scale of divisional factors, we found numerous deficiencies therein.[4] Those deficiencies were viewed in light of our conclusion that an adjustment is required to compensate the respective groups of carriers according to their expenditures in the joint effort of handling the interterritorial traffic in question. No one deficiency was found controlling. In so holding, we also rejected arguments that equal factor divisions should be maintained. 325 I.C.C. at page 27. To the extent the present divisions did not meet the foregoing test, they were found unjust, unreasonable, and inequitable. 325

4. See, e.g., 325 I.C.C. at page 37.

I.C.C. at page 50. In our judgment, all other factors of section 15(6) being substantially equal, the divisional scales prescribed on the basis of restated cost proportions will produce divisions which we consider fair and equitable as between the parties. No other basis has been shown to be appropriate here. In any event, except for the Norfolk Southern, no carrier at any time has satisfactorily demonstrated a special situation which required special and separate treatment. Accordingly, considering the scales prescribed in light of the traffic and cost studies referred to in our prior report, and the record as a whole, we find nothing revenue-wise or in any other respect which would warrant a change in our findings as to railroads in either territory, individually or as groups. We affirm our prior findings and conclusions as warranted by the record.

COMMISSIONER MURPHY, dissenting in part:

I am in accord with the majority's findings that the basis agreed to between the official lines and the Norfolk Southern is reasonable and may be approved. I do not agree, however, that the record contains evidence of specific cost factors which would support the construction of the divisional scales prescribed in the prior report. In this regard, I adhere to my separate dissenting-in-part expression in that report.

455

COMMISSIONER TUGGLE did not participate.

It is ordered, That insofar as the prior report, 325 I.C.C. 1, involved traffic moving between points on the Norfolk Southern and points in official territory via the gateway of Norfolk, Va., the instant proceedings be, and they are hereby, reopened for reconsideration on the present record, and the effective date of the order herein, dated February 3, 1965, and served March 2, 1965, having been temporarily restrained by the United States District Court for the East-

ern District of Louisiana, New Orleans Division, on April 12, 1965, in civil action No. 15454, Aberdeen and Rockfish R.R. Co., et al. *v.* United States, et al., be, and it is hereby, vacated and set aside insofar as said order requires prescription of scales of prorating factors applicable to said traffic.

It is further ordered, That the complainants, cross-complainants, defendants, and respondents, according as they participate in the transportation, be, and they are hereby, notified and required to establish on or before July 30, 1965, and thereafter to apply, divisions of joint all-rail interstate rates for the transportation of property on traffic originating or terminating on the lines of the Norfolk Southern Railway Company, and moving to or from points in official territory, via Norfolk, Va., determined as provided in the supplemental report on further consideration issued contemporaneously herewith and made a part hereof. Actual settlement on the basis of the new divisions shall be, and it is hereby, postponed pending decision of the three-judge statutory court on the pending application for interlocutory injunction, and thereafter shall be governed by and subject to the court's order granting or denying said injunction and any protective payback conditions which may be imposed therein.

It is further ordered, That our prior report and order herein, dated February 3, 1965, and served March 2, 1965, except as modified and amplified in said supplemental report on further consideration be, and it is hereby, affirmed in all respects and together with this order, subject to the above-mentioned restraining order of the court, shall continue in force until further order of the Commission.

By the Commission.

BERTHA F. ARMES,
Acting Secretary.

* V.S. 37, pages 3-4 and appendix B therein.

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Answer of the Intervening Defendants to Supplemental Complaint.

Now into Court come the intervening defendants, The Baltimore and Ohio Railroad Company et al., and, in answer to the Supplemental Complaint of Aberdeen and Rockfish Railroad Company et al., plaintiffs herein, allege:

I.

Intervening defendants admit the allegations of Article I.

II.

Answering the allegations of Article II, intervening defendants admit that the complaint of the plaintiff Southern railroads filed herein on or about March 31, 1965, was denominated as a complaint to set aside in part an order of the Interstate Commerce Commission, but deny that it was in fact such a complaint in that the said order was not severable in the respect alleged in such complaint.

III.

Answering the allegations of Article III, intervening defendants admit that no Southern railroad nor any other party to the proceeding before the Commission filed a petition for reconsideration of its order of February 3, 1965, and that plaintiff Norfolk Southern Railway Company on April 1, 1965, filed a petition with the Commission for fur-

ther consideration limited to the divisions prescribed on that portion of its traffic described in Finding 4 of the Commission's report of February 3, 1965 (325 I. C. C. 1, 51-52); and otherwise deny the allegations of said Article.

IV.

For answer to so much of the allegations of Article IV as relate to the content of the Supplemental Report and Order of the Commission on Further Consideration, decided May 18, 1965, served May 21, 1965, and reported at 325 I. C. C. 449, a copy of which is annexed to the Supplemental Complaint as Exhibit A, intervening defendants respectfully refer thereto for a more exact statement; otherwise intervening defendants deny the allegations of Article IV, and particularly deny that the Commission failed to make any necessary findings in its reports, that there were any defects or mistakes of fact therein, or that either or both of the reports and orders of the Commission were unlawful in any respect.

V.

For answer to the allegations of Article V, intervening defendants refer to the report and order of the Commission of May 18, 1965, served May 21, 1965, and reported at 325 I. C. C. 449, a copy of which is attached to the Supplemental Complaint herein, for a more exact statement of its contents.

VI.

Answering Article VI, intervening defendants deny that the last paragraph of the Commission's Supplemental Order of May 18, 1965, reported at 325 I. C. C. 455 and quoted in Article V of the Supplemental Complaint, is unlawful on all or any of the grounds specified in the original Complaint in this action; deny that the original order contained defects or was based upon any mistake of fact; and further deny that the Supplemental Report and Order are unlawful in any respect whatsoever.

VII.

Intervening defendants deny the allegations of Article VII.

WHEREFORE, intervening defendants pray that, after due proceedings had, the Supplemental Complaint of Aberdeen and Rockfish Railroad Company et al., be dismissed at plaintiffs' costs.

(Title omitted in printing.)

Joint Answer of the United States of America and the Interstate Commerce Commission to the Supplemental Complaint.

The United States of America and the Interstate Commerce Commission, defendants herein, answer the supplemental complaint as follows:

I.

Admit the allegations contained in paragraphs I, II, and III.

II.

With respect to the allegations contained in paragraph IV, admit that the Commission's Supplemental Report and Order of May 18, 1965, disposed of problems raised by the Norfolk Southern's petition for reconsideration and, in addition, affirmed and clarified its prior findings and conclusions. Further, defendants deny the existence of any defect in the Commission's prior report and order and aver that the Commission has continuing jurisdiction over its orders and may at any time correct, change, modify, amplify, or clarify any of its prior findings or conclusions in order to completely and adequately reflect the reasons or bases in law or in fact for its decision so that review by the court may be accomplished with an accurate understanding of the Commission's action.

III.

Admit the allegations made in paragraph V, but refer to the Commission's Supplemental Report and Order for a true, complete, and accurate statement of the matters contained therein.

IV.

Deny each and every allegation contained in paragraphs VI and VII.

V.

In further answer to the allegations contained in the Supplemental Complaint, deny that the Supplemental Report and Order of the Commission is invalid or unlawful for the reasons claimed or for any other reasons whatsoever, and aver that said Supplemental Report and Order is fully supported by the record and is valid in all respects. Except as expressly admitted herein or in answer to the allegations contained in the original complaint, deny each and every other allegation made by plaintiffs.

WHEREFORE, defendants pray that the relief sought in the Supplemental Complaint be denied and that the complaint be dismissed with costs.

(Title omitted in printing.)

Supplemental Intervening Complaint of the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners.

Intervening plaintiffs, the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners, for futher statement of their claim against defendants allege:

I.

On May 21, 1965, the Interstate Commerce Commission *sua sponte* served a Supplemental Report and Order purporting to modify, amplify and reaffirm that part of its previous order dated February 3, 1965, which is the subject of this Court action.

II.

To the extent that the Commission has modified or amplified its previous report and order in this manner, such modification or amplification is unlawful as a violation of those constitutional provisions guaranteeing a separation of powers and due process of law guaranteed by the Federal Constitution and a violation of the requirements of the Administrative Procedure Act that there be a separation of executive and judicial functions.

III.

To the extent that the Supplemental Report and Order reaffirm the action taken by the Commission in its original

report and order, such reaffirmation is unlawful for all the reasons set forth in the original complaint filed by these intervening plaintiffs; even if the modification and amplification attempted in the Supplemental Report and Order were otherwise valid, they would not cure any of the defects in the original Report and Order.

WHEREFORE, intervening plaintiffs pray:

(1) That the part of the Commissioner's order dated May 18, 1965, purporting to modify, amplify and affirm the Order of February 3, 1965, be permanently set aside.

(2) That this Court declare the unlawfulness of, and set aside, the Order of February 3, 1965, regardless of the validity of the Order of May 18, 1965.

(3) That intervening plaintiffs recover their proper costs.

(4) That intervening plaintiffs have such other and further relief in the premises as in equity may be deemed meet and just by this Honorable Court.

(Subscription of counsel, Certificate of acquiescence and Certificate of Service omitted in printing.)

Answer of Intervening Defendants to Supplemental Intervening Complaint of the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners.

Now into Court come the intervening defendants, The Baltimore and Ohio Railroad Company et al., and, in answer to the Supplemental Intervening Complaint of the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners, intervening plaintiffs herein, allege:

I.

For answer to the allegations of Article I, intervening defendants refer to the Supplemental Report and Order of the Commission on Further Consideration, decided May 18, 1965, served May 21, 1965, and reported at 325 I. C. C. 449, a copy of which is annexed to the Supplemental Complaint as Exhibit A, for a more exact statement of its contents and purport; and otherwise deny the allegations of said Article.

II.

For answer to the allegations of Article II, intervening defendants refer to the Supplemental Report and Order of the Commission on Further Consideration, decided May 18, 1965, served May 21, 1965, and reported at 325 I. C. C. 449, a copy of which is annexed to the Supplemental Complaint as Exhibit A, for a more exact statement of its contents,

purport and effect; and otherwise deny that said Report and Order are unlawful in any of the respects alleged in said Article.

III.

Answering Article III, intervening defendants refer to said Supplemental Report and Order for a more exact statement of its contents, purport and effect; and deny that said Report and Order are unlawful for any or all of the reasons set forth in the original Complaint filed by intervening plaintiffs; deny that there were any defects in the original Report and Order of the Commission; and further deny that the Supplemental Report and Order are unlawful in any respect whatsoever.

WHEREFORE, intervening defendants pray that, after due proceedings had, the Supplemental Intervening Complaint of the Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners be dismissed at intervening plaintiffs' costs.

(Title omitted in printing.)

Joint Answer of the United States of America and the Interstate Commerce Commission to the Supplemental Intervening Complaint of the Southern Governors' Conference et al.

The United States of America and the Interstate Commerce Commission, defendants herein, answer the supplemental intervening complaint as follows:

I.

With respect to the allegations contained in paragraph I, admit that a Supplemental Report and Order of the Commission on Further Consideration, 325 I.C.C. 449, decided May 18, 1965, was served on May 21, 1965, and refer to same for a true, complete and accurate statement of its contents and purport; and otherwise deny the remaining allegations.

II.

Deny the allegations contained in paragraphs II and III.

III.

In further answer to the allegations contained in the Supplemental Complaint, deny that the Supplemental Report and Order of the Commission is invalid or unlawful for the reasons claimed or for any other reasons whatsoever, and aver that said Supplemental Report and Order is fully supported by the record and is valid in all respects.

Except as expressly admitted herein or in answer to the allegations contained in the original complaint, deny each and every other allegation made by plaintiffs.

WHEREFORE, defendants pray that the relief sought in the Supplemental Complaint be denied and that the complaint be dismissed with costs.

(Title omitted in printing.)

Pretrial Order.

Pursuant to the Order of the Court dated January 25, 1966, as modified by the Order of the Court dated February 14, 1966, the plaintiffs, intervening plaintiffs, defendants and intervening defendants submit the following pretrial order, prepared in accordance with the Court's order, for entry in this proceeding:

1. This is an action in which plaintiffs and intervening plaintiffs seek to set aside in part the orders of the Interstate Commerce Commission in an administrative proceeding identified as I.C.C. Docket No. 29799, *Akron, Canton & Youngstown Railroad Co., et al. v. Aberdeen and Rockfish Railroad Co., et al.*, and I.C.C. Docket No. 29885, *In the Matter of Divisions of Joint Rates Between Official and Southern Territories.* The principal Report of the Commission in these proceedings is published at 325 I.C.C. 1. A supplemental Report and Order of the Commission on Further Consideration is published at 325 I.C.C. 449. Plaintiffs are forty-two principal Southern railroads. Intervening plaintiffs are the Southeastern Association of Railroad and Utilities Commissioners and the Southern Governors Conference, representing the States of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina and Tennessee. Defendants are the United States of America (the statutory defendant by virtue of 28 U.S.C. § 2322) and the Interstate Commerce Commission. Intervening defendants are virtually all of the railroads serving the Northeastern part of the United

States. This case is required to be heard by a federal district court composed of three judges pursuant to 28 U.S.C. §§ 2284 and 2325. There are no jurisdictional questions other than that set forth in defendants issue of law No. 11 (Paragraph 5B(13), *infra*).

2. There are no pending motions.

3. The facts listed below are established by the pleadings or by stipulations or admissions of counsel. However, the parties reserve the right to challenge the relevance, materiality or weight to be accorded to these facts or any of them at the hearing of this cause.

(1) The administrative orders sought to be set aside in part by the Southern railroads and the Southern interveners in this action arose out of a proceeding before the Interstate Commerce Commission involving a controversy over the division between Southern and Northern railroads of revenues derived from freight traffic moving between Official and Southern territories. Official territory lies generally east of the Mississippi River and north of the Ohio River and certain points in Virginia. Southern territory lies generally east of the Mississippi River and south of Official territory.

(2) Freight traffic between the North and the South generally moves on joint rates, meaning that the shipper pays a single sum for the transportation service provided jointly by the Northern and the Southern railroads. That sum is then divided among the railroads participating in the particular shipment on established bases, and the resulting shares of the revenue are called "divisions." The first, or so-called primary, division of each joint rate is between the participating railroads north and south of designated primary dividing points (such as Ohio River points and Richmond, Virgina), as groups, and it was these primary divisions that were at issue in the proceeding here under review.

Subdivisions of the primary divisions among the participating railroads in each of the groups were not at issue in that proceeding.

(3) Prior to the orders of the Commission in this proceeding, the primary divisions of revenues accruing from Official-Southern traffic were made under an equal-factor scale prescribed by the Commission itself in its 1953 decision in Docket No. 29885 (officially reported at 287 I.C.C. 497). The length of the respective hauls in each territory varies from shipment to shipment, but, on the average, the longer haul on Official-Southern traffic is in the South.

(4) The general basis of divisions prescribed by the orders of the Commission consists of two separate scales, one of which determines the divisional factor for rail service in the North, while the other is applicable to rail service in the South. The Commission's finding that the prescribed divisional scales will decrease the revenue of the Southern railroads in the amount of $7,948,004 is a correct figure based upon the method of calculation used by the Commission (Plaintiffs, however, do not agree that the method used by the Commission correctly measures the revenue effect of its order). The plaintiffs' method of calculating the decrease in revenue is to apply the new divisional scales to their traffic study by mileage blocks. The record will not permit of such a calculation as to all of the traffic involved. But it is agreed that by the application of this method together with a reasonable estimate with respect to the traffic as to which said method of calculation cannot be used, the decrease in revenue to the Southern railroads would amount to $8,726,591, i.e., from $274,656,425 to $265,929,834. The latter figure is $204,940 less than Southern lines' cost proportion of the total revenue on the traffic involved based on the costs found by the Commission. The factors in the

Northern scale are 10% higher than the factors in the Southern scale for each 50 miles of line-haul service performed and 45% higher than the Southern factors for terminal and interchange service. (Defendants assert, however, that this does not mean that the divisions of the Northern lines are higher than those of the Southern lines by such percentages.) Overall, the divisions and revenues of the Southern railroads are reduced approximately 3%. Many divisions of Northern railroads were reduced by the Commission's order.

4. This case is to be heard upon the certified record of the proceeding before the Interstate Commerce Commission without the taking of additional evidence by the Court; consequently, apart from such factual matters as are incidental to the issues stated below, there are no contested issues of fact.

5. The parties are unable to agree upon a joint statement of the contested issues of law remaining in controversy.

A. The issues of law as stated by plaintiffs and intervening plaintiffs are as follows:

(1) Whether the Commission violated the requirements of Section 7(c) of the Administrative Procedure Act (5 U.S.C. § 1006(c)) by imposing upon the Southern railroads the burden of proof with respect to the costs of handling the particular traffic involved in this case, where the Northern railroads were the complainants in the proceedings before the Commission, and where the Northern railroads sought an inflation in their divisions which would accord them greater compensation than the Southern railroads for the same amount and kind of rail service?

(2) Whether, regardless of the proper allocation of the burden of proof in the proceedings before the Commission, the Northern railroads failed to comply

with a legal obligation to come forward with data in their sole possession showing their costs of handling the particular traffic involved in this case?

(3) Whether the Commission has power under Sections 12(1), and 20(1) of the Interstate Commerce Act (49 U.S.C. §§ 12(1), 20(1)) to compel parties before it to produce evidence in their sole possession necessary to resolve issues affected with the public interest, and, if so, whether the Commission's failure to assure the making of a complete record of the costs of handling the traffic involved in this case requires that its orders be set aside?

(4) Whether the Commission violated Section 8(b) of the Administrative Procedure Act (5 U.S.C. § 1007(b)) in adopting its examiners' approach to the issues of burden of proof, duty to come forward and responsibility for an adequate record, without making either rulings upon, or findings with respect to, the Southern railroads' specific exceptions to that approach?

(5) Whether the admitted participation of the Commission's Cost Section in its decision-making process deprived the Southern railroads and the Southern interveners of the full and fair hearing to which they were entitled under the Interstate Commerce Act (49 U.S.C. § 1, *et seq.*), the Administrative Procedure Act (5 U.S.C. § 1001 *et seq.*), and Amendment V of the Federal Constitution?

(6) Whether the action of the Commission in this case rests upon an unlawful conception of the rule that there must be evidence typical in character and ample in quantity with respect to the divisions and services performed under the particular rates being divided?

(7) Whether the Commission violated Section 7(d) of the Administrative Procedure Act (5 U.S.C. § 1006(d)) by relying upon evidence and data outside the record in the resolution of material issues before it?

(8) (a) Whether the Commission violated Section 7(c) of the Administrative Procedure Act (5 U.S.C. § 1006(c)), wrongfully sanctioned a failure on the part of the party in possession of evidence to come forward with it, or improperly ignored its own obligation to assure an adequate record when it rejected the Southern railroads' adjustment of territorial average costs to exclude suburban passenger deficits on the ground that the adjustment did not take into account the fact that a part of these deficits is related to freight service, where neither the Northern railroads nor the Commission put the data in the record which is necessary to disclose the existence or extent of this relationship?

(b) Whether the Commission acted arbitrarily and without the support of substantial evidence within the meaning of Section 10(e) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) when it included all of the Northern railroads' suburban passenger deficits in the freight costs used to determine their costs of handling Official-Southern traffic, where the evidence showed, and the Commission expressly recognized, that some of the suburban passenger deficits had nothing whatever to do with freight operations?

(c) Whether the treatment accorded suburban passenger deficits by the Commission is inconsistent in principle with the previously recognized principle that such deficits constitute a problem which should be treated separately so as not to impose a burden upon freight service, and, if so whether the Commission's failure to make reasoned findings explaining its departure from this previously established principle violates

Section 8(b) of the Administratve Procedure Act (5 U.S.C. § 1007(b))?

(9) Whether the Commission acted arbitrarily and without support of substantial evidence within the meaning of Section 10(c) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) when it ascribed 58% higher costs to the Northern railroads for interchanging freight cars at the territorial gateways?

(10) (a) Whether the Commission acted arbitrarily and without the support of substantial evidence within the meaning of Section 10(e) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) when it used territorial average car costs as the measure of the cost of the cars handling Official Southern traffic, even though this traffic is carried in the same cars in both territories?

(b) Whether the Commission violated Section 8(b) of the Administrative Procedure Act (5 U.S.C. § 1007(b)) because the reasons given by the Commission to support its use of territorial average car cost figures are irrational and wholly insufficient to support such figures?

(c) Whether the Commission violated Section 15(6) of the Interstate Commerce Act (49 U.S.C. § 15(6)) in prescribing inflated divisions for the Northern railroads based partly upon higher average car costs in the North where these higher average car costs are the product, in part at least, of differences in rentals paid by the two groups of railroads for cars used by them but owned by other railroads, rather than any cost incurred in the service of transportation?

(11) (a) Whether the Commission violated Section 7(c), of the Administrative Procedure Act (5 U.S.C. § 1006(c)), wrongfully sanctioned a failure on the part of the party in possession of evidence to come

forward with it, or improperly ignored its own obligation to assure an adequate record when it rejected the Southern railroads' adjustment of territorial average switching costs (based upon an actual study of switching operations in the South) on the ground that no comparable study had been made in the North?

(b) Whether the Commission violated Section 8(b) of the Administrative Procedure Act (5 U.S.C. § 1007(b)) in simply reciting contentions of the parties with respect to switching costs without findings as to the soundness of the contentions recited, and in adopting practically verbatim the report of its examiners on this issue without making rulings upon, or findings with respect to, the Southern railroads' exceptions on the issue?

(12) (a) Whether the Commission violated Section 7(c) of the Administrative Procedure Act (5 U.S.C. § 1006(c)), wrongfully sanctioned a failure on the part of the party in possession of evidence to come forward with it, or improperly ignored its own obligation to assure an adequate record when it rejected the Southern railroads' adjustment of territorial average empty return ratios on the ground that this adjustment was based upon inadequate evidence with respect to the empty return ratios of the Northern railroads in handling the traffic at issue?

(b) Whether the Commission acted arbitrarily and without the support of substantial evidence within the meaning of Section 10(e) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) when it used territorial average empty return ratios as a measure of the empty return experience of both groups of railroads on Official-Southern traffic, even though empty return ratios of freight cars are substantially affected by the kind of freight carried and there are substantial differences in the composition of the average traffic

in the respective territories that have nothing to do with Official-Southern traffic at issue in this case?

(13) (a) Where the Commission violated Section 7(c) of the Administrative Procedure Act (5 U.S.C. § 1006(c)), wrongfully sanctioned a failure on the part of the party in possession of evidence to come forward with it, or improperly ignored its own obligation to assure an adequate record when it rejected the Southern railroads' adjustment of territorial average costs to remove inconsistencies in the count of cars interchanged by the two groups of railroads on the ground the evidence of record was not adequate with respect to the Northern railroads' operations to permit a correct computation of the adjustment?

(b) Whether the Commission acted arbitrarily and without the support of substantial evidence within the meaning of Section 10(e) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) when it used the count of cars interchanged as reported and included in the territorial averages, even though the evidence showed that this count overstated the costs of the Northern railroads relative to those of the Southern railroads?

(14) Whether the Commission violated Section 7(c) of the Administrative Procedure Act (5 U.S.C. § 1006(c)) wrongfully sanctioned a failure on the part of the party in possession of evidence to come forward with it, or improperly ignored its own obligation to assure an adequate record when it rejected the Southern railroads' adjustment of the territorial average constant cost of transit commodities in the South on the ground that evidence was not available by which it could be determined whether a comparable adjustment should be made in the territorial average of the North?

(15) Whether, even assuming that the Commission's specific cost findings are accepted, the Commission violated Section 8(b) of the Administrative Procedure Act (5 U.S.C. § 1007(b)) by failing to make reasoned findings to support the conclusion which it stated that the higher costs found to have been experienced by the Northern railroads in the handling of Official-Southern traffic reflected inherent disadvantages in transportation conditions in the North?

(16) Whether there is substantial evidence in the record within the meaning of Section 10(e) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) to support the view taken by the Commission that the higher Northern costs found must reflect inherent territorial disadvantages, as compared to the South, because all other things which might explain the cost differences on other grounds are equal in the two territories?

(17) Whether the Commission satisfied the requirement of Section 15(6) of the Interstate Commerce Act (49 U.S.C. § 15(6)) that it give due consideration to the matter of relative efficiency in prescribing divisions of joint freight rates where the Commission found the Northern railroads experienced higher costs for several aspects of the handling of Official-Southern freight traffic but made no findings as to why it was necessary that the Northern railroads incur higher costs in handling the Official-Southern traffic at issue?

(18) (a) Whether the Commission violated the requirement of Section 15(6) of the Interstate Commerce Act (49 U.S.C. § 15(6)) that it give due consideration to the matter of relative needs in prescribing divisions of joint freight rates when it prescribed a basis of divisions which would diminish the revenues

of the Southern railroads by an amount substantially greater than found in its reports?

(b) Whether, regardless of the amount of the revenue loss imposed upon the Southern railroads, the Commission violated Section 15(6) of the Interstate Commerce Act (49 U.S.C. § 15(6)) by increasing the revenues of the Northern railroads through an inflation in their divisions without any finding that the revenue needs of those railroads were greater than those of the Southern railroads?

(19) Whether the Commission violated Section 8(b) of the Administrative Procedure Act (5 U.S.C. § 1007(b)) in prescribing an inflation in the divisions of the Northern railroads ostensibly to offset inherent territorial disadvantages in transportation conditions in the North, without: (a) making any ruling at all upon the Southern interveners' exception which objected to any imposition of the burden of the Northern transportation problems upon the South without specific findings that the Southern economy could sustain such burdens and that the North could not sustain its own burdens; (b) making any finding to explain the need for, or effect of, the Northern inflation in terms of the economic conditions in the two territories; or, (c) offering any explanation at all for the abandonment of the previously established principle of primary local responsibility under which divisions had consistently been maintained at a uniform level except to the extent that rate levels were found to be higher in one territory or another?

(20) Whether there is substantial evidence in the record within the meaning of Section 10(e) of the Administrative Procedure Act (5 U.S.C. § 1009(e)) to support the conclusion implicit in the Commission's action that the Southern economy can better afford

to provide the means for meeting Northern transportation problems than the North's own economy?

(21) Whether the Commission's issuance, on its own motion, of a supplemental report in which it undertook to answer issues raised in the complaint in this action, constitutes a denial of due process within the meaning of Amendment V to the Federal Constitution, either in that such supplemental report was issued without notice to plaintiffs and intervening plaintiffs, or in that such action failed to observe a separation between the judicial and executive function of the Commission?

(22) Whether the procedure adopted by the Commission in this proceeding by which its Cost Section was permitted to participate, not as a party representing the public, but as a decision-maker, and by which the Commission itself became an advocate defending its order against attack so far departed from the accepted course of administrative proceedings that the Southern railroads and the Southern interveners were denied the full and fair hearing to which they were entitled under the Interstate Commerce Act (49 U.S.C. § 1 *et seq.*), the Administrative Procedure Act (5 U.S.C. § 1001 *et seq.*) and Amendment V of the Federal Constitution?

(23) Whether, if the Court holds that the Commission's action prescribing an inflation in the divisions of Northern railroads is illegal for any of the reasons urged by the plaintiffs or intervening plaintiffs, the judgment of this Court should set aside only that part of the Commission's order which illegally prescribes an inflation in the Northern railroads' divisions and thus leave undisturbed that portion of the Commission's order correcting the relationship as between long-haul and short-haul carriers?

B. The issues of law as restated by defendants and intervening defendants are as follows:

(1) Whether the Commission violated the requirements of Section 7(c) of the Administrative Procedure Act, 5 U.S.C., Section 1006(c), with respect to the burden of proof regarding

(a) the cost of performing the service involved;

(b) the Southern lines' proposed adjustment with respect to suburban passenger deficits;

(c) the Southern lines' proposed adjustment with respect to switching costs;

(d) the Southern lines' proposed adjustment with respect to empty return ratios of freight cars;

(e) the Southern lines' proposed adjustment with respect to the count of cars interchanged;

(f) the Southern lines' proposed adjustment with respect to constant costs on transit commodities in the South.

(2) Whether the Commission's findings with respect to the cost of service are supported by substantial evidence as regards

(a) the Southern lines' proposed adjustment as to suburban deficits;

(b) the Southern lines' proposed adjustment as to the cost of interchanges at territorial gateways;

(c) the Southern lines' proposed adjustment as to car costs;

(d) the Southern lines' proposed adjustment as to empty return ratios of freight cars;

(e) the Southern lines' proposed adjustment as to the count of cars interchanged.

(3) Whether the clause numbered (1) in the last sentence in Section 8(b) of the Administrative Procedure Act required the Commission to state in its report any findings, conclusions, reasons or bases, beyond those stated therein, with respect to

(a) the burden of proof;

(b) the Southern lines' proposed adjustment as to suburban passenger deficits;

(c) the Southern lines' proposed adjustment as to car costs;

(d) the Southern lines' proposed adjustment as to switching costs.

(4) Whether the Commission or its examiners may lawfully consult with staff members of its Cost Section regarding cost evidence of record, or request and receive from such staff members analyses of such cost evidence, when said staff members are not shown to have any disability which would prevent them from performing such functions fairly and dispassionately.

(5) Whether the Commission relied upon data outside the record, and, if so, whether it violated Section 7(d) of the Administrative Procedure Act.

(6) Whether the acceptance or rejection of the cost adjustments proposed by the plaintiffs was an administrative question peculiarly within the competence of the Commission.

(7) Whether the Commission was bound, as a matter of law, to find, in support of its cost conclusion, that the higher costs experienced by the Northern railroads in the handling of Official-Southern traffic reflected in-

herent disadvantages in transportation conditions in the North.

(8) Whether the Commission discharged its obligation under Section 15(6) of the Interstate Commerce Act to "give due consideration to the efficiency with which the carriers concerned are operated"?

(9)A Whether the difference in the methods used by plaintiffs and the Commission in estimating the Southern lines' revenue reduction involves a violation of Section 15(6) of the Interstate Commerce Act, and requires that the Commission's order be set aside.

(9)B Whether the Commission was obliged by Section 15(6) to find a greater revenue need on the part of Northern lines than of Southern lines as a condition to prescribing cost related divisions?

(10) Whether there was any error of law in the Commission's application of the typical evidence rule?

(11) Whether the clause numbered (1) in the last sentence in Section 8(b) of the Administrative Procedure Act required the Commission to state in its reports any findings, conclusions, reasons, or bases, beyond those stated therein, with respect to the contentions of the Southern intervenors regarding the need for or effect of increased divisions for Northern lines in relation to economic conditions in the two territories.

(12) Whether the Commission's supplemental report in this proceeding resulted in a denial of due process or in any other violation of law.

(13) Whether, assuming that the Commission's order should be held invalid for any of the reasons urged by the plaintiffs or intervening plaintiffs, it may be concluded that the Commission found the pre-existing scale less 37 integers to be "the lawful equal scale";

if so, whether such was a severable finding and, if so, whether this Court has jurisdiction or authority to set aside the Commission's prescription of a higher basis of divisions for Northern railroads than for Southern railroads and adjudicate that, instead, the Southern railroads shall have a higher basis than the Northern railroads.

(14) If the Commission is found to have erred with respect to any of the issues stated above, were such errors prejudicial to plaintiffs or intervening plaintiffs?

(15) Were each of plaintiffs' points that are involved in the foregoing issues timely raised before the Interstate Commerce Commission?

(16) Is there a rational basis for the Commission's order?

6. The only exhibit in this case consists of the certified record of the proceeding before the Interstate Commerce Commission in the administrative proceeding identified in paragraph 1, *supra*.

7. Permission is granted the defendants, United States of America and Interstate Commerce Commission, to amend their answer to paragraph XV of the complaint, and paragraph XI of their answer shall be considered to have been amended to read:

With respect to the allegations contained in paragraph XV, admit that, among other things, the Commission's Section of Cost Finding of its Bureau of Accounts furnishes cost data, upon request, to the Suspension Board for use in considering whether or not to suspend newly filed rates and, upon request of hearing examiners or the Commission, analyzes the cost evidence submitted by the parties in proceedings involving rates and divisions thereof, but deny that the

Cost Finding Section engages in the performance of investigative or prosecuting functions, or that in furnishing analyses of the cost evidence in Docket 29885, it resorted to factual data, or assumptions with respect to factual data, not contained in that record. Except as expressly admitted herein, deny each and every other allegation of said paragraph XV.

8. The briefs of plaintiffs and intervening plaintiffs will be due on May 15, 1966, and briefs of defendants and intervening defendants will be due on August 1, 1966. Reply briefs of plaintiffs and intervening plaintiffs will be due on September 1, 1966.

The briefs will be printed on pages which are 8½ inches by 11 inches in size, sewn and bound on the left side. Type will cover approximately 5 inches by 8½ inches of the page.

9. Proposed findings of fact and conclusions of law will be filed by all parties to this action on September 15, 1966.

10. For the convenience of the Court in considering the case, a joint appendix containing portions of the record will be prepared in the following manner: On the day the plaintiffs and intervening plaintiffs file their briefs with the Court, they will serve upon the defendants and intervening defendants a designation of the portions of the record they think it necessary to print. The same procedure shall be followed by the defendants and intervening defendants on the day they file their briefs, as well as by the plaintiffs and intervening plaintiffs on the day they file their reply briefs. The joint appendix will be filed with the Court on September 15, 1966.

Plaintiff Southern railroads will initially sustain the responsibility for preparation of the joint appendix and the cost of its printing, but both the Northern railroads and the Southern railroads stipulate that the costs of the

joint appendix will be considered as a part of the costs of the case and taxed against either the Northern railroads or the Southern railroads, depending upon which party is taxed with the costs of the case.

Since this joint appendix is printed only for the convenience of the Court, the Court is not limited to the portions of the record there printed, but may refer to other portions.

The joint appendix will be printed on white opaque paper, 8½ inches by 11 inches in size, with type covering 5 inches by 8½ inches of the page (with reasonable variance for planographed documents, such as Commission reports and orders), stitched along the left margin, and covered with white cardboard covers.

Five copies of the joint appendix shall be furnished to the Court, 15 copies shall be furnished to the plaintiffs, 10 copies shall be furnished to the intervening plaintiffs, 2 copies to the defendant United States, 3 copies to the defendant Interstate Commerce Commission, and 15 copies to the intervening defendants Northern railroads.

11. The probable length of the trial (oral argument) will be three hours for each side, for a total of six hours.

Respectfully submitted,

(Subscription of Counsel for all parties omitted in printing.)

UNITED STATES DISTRICT COURT
EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Order Amending Pretrial Order.

Considering the foregoing motion for amendment to pretrial order:

IT IS ORDERED that paragraph 9 of the pretrial order be and it is hereby amended to read as follows:

"9. Proposed findings of fact and conclusions of law will be filed by all parties to this action on October 15, 1966."

IT IS FURTHER ORDERED that the last sentence of the first full paragraph of paragraph 10 of the pretrial order be and it is hereby amended to read as follows:

"The joint appendix will be filed with the Court on October 15, 1966."

The remainder of the pretrial order of April 15, 1966, shall remain in full force and effect.

NEW ORLEANS, LOUISIANA, this 13th day of September, 1966.

/s/ JOHN MINOR WISDOM,
Circuit Judge.

Reporter's Transcript of Hearing Before the Three-Judge Court on December 12, 1966.

Arthur J. Cerra, Esq.
Assistant General Counsel

Attorney for
Interstate Commerce Commission

REPORTED BY

Felix L. Olivier, Official Court Reporter

[3]

THE COURT (Judge Wisdom):

The Court has read all the briefs, believe it or not, and we question whether you need as much time for argument as you have said that you needed. Let first state our reaction to the case generally.

It occurs to us that it is hardly possible that Congress contemplated that the Southern economy should be burdened with supporting Northern commuters from Northern suburbs; and that the difference between the Southern

economy in the transportation area and the Northern transportation area is that we do not have suburbs nor commuter trains to any appreciable extent, and that this is such a difference between the two areas that it is a factor that should be given importance not only by the Commission, but by the Congress, and that if Congress really intended that one area should support another area, that the Congress should say so.

Now, against that is the King case, which may or may not be distinguishable on the grounds of common facilities. But since we do not have commuter trains and suburbs to any appreciable sense casts doubt; and perhaps the King case is inapplicable, because of the great difference between the two areas.

Now, we are open-minded on this question, but this is to us the important question: Should or does the Interstate Commerce Act require and does the Commission have the author-

[4]

ity to, in effect, burden the South with the passenger deficits in the North? We consider that there are some points that are extremely picayunish raised in the briefs, and others if not picayunish, should not be argued. For example the cost analysis point. We see no reason to argue that point. We think that the Commission was fully entitled to use the cost analysis. We think the Commission was fully entitled to issue a supplemental report, and also there is nothing to the argument, or no merit to the argument that the Northern railroads withheld evidence. There was discovery open to be used and so we consider the point insubstantial. There may be other insubstantial points, but we have given you now our general reaction to the case and we suggest that you confine yourselves to important points.

You may proceed, gentlemen.

How much time do you think you will need for argument per side?

MR. TRIENENS:

I think we can open in forty-five minutes and perhaps save fifteen minutes for reply.

THE COURT (Judge Wisdom):

All right. That will be an hour and ten minutes. You speak now for the plaintiffs?

MR. TRIENENS:

Plaintiffs.

[5]

THE COURT (Judge Wisdom):

We have allowed an intervention in this case. How much time would the intervenor require?

MR. SANDERS:

I am representing the intervenor. I think we can finish up our argument in about twenty to twenty-five minutes; no more than thirty at the most.

THE COURT (Judge Wisdom):

Let's see. That would be an hour and a half. We are not going to hold you strictly to the limits that you tentatively fix now; if you need more time, the Court will need more time, and we will just not confine you too closely to any estimate of time.

And I suppose, that speaking for the Commission, you would require about the same time?

MR. CERRA:

About the same time.

THE COURT (Judge Wisdom):

That being so, we think probably the case can be concluded in three hours, but we think it certainly should be concluded in less than the six, the first estimate.

You may proceed now, and will you please state your name for the benefit of the Court?

MR. TRIENENS:

My name is Howard Trienens. I appear on behalf of plain-

[6]

tiffs, southern railroads.

The first item of business in a three judge matter is to offer in evidence the certified record. That is the only evidence and it has been stipulated that is the only evidence to be offered, and we ask that the certified record in Interstate Commerce Commission docket 29885 be received in evidence as Plaintiff's Exhibit Number 1.

THE COURT (Judge Wisdom):

Let it be received in evidence.

No objections?

MR. CERRA:

No objection.

MR. TRIENENS:

We are here, of course—without going into the background of what a division is, the background facts have all been developed—we are here aiming our whole challenge on the legal ground that the action of the Commission which fixed, in lieu of the uniform equal factor, a scale which is forty-five per cent higher in the North for terminals and ten per cent on the line-haul.

Now, I will direct my attention to that imposition of inflation and the grounds upon which the Commission based it and the reason why we think it violated the Administrative Procedure Act.

I think it is also important to note the background

[7]

fact that the Commission has made freight rates on a uniform basis everywhere East of the Rockies, and the divisions today are on a uniform basis between the North and Southwest, on a uniform basis today between the North and Midwest, and were on a uniform basis between the North and South until this case.

THE COURT (Judge Wisdom):

But they are not necessarily between the South and the Northwest?

MR. TRIENENS:

Oh, no; those are on a completely different basis.

Now, as the Court points out, there is a lot of traffic handled by the railroads. The Southern roads, for example, we handle traffic between North and South. This is important; this is a million carloads a year or so. We also handle traffic to the Southwest, to the Pacific Coast; and we handle coal traffic which is not an issue.

But the traffic here before the court is about twenty per cent of our business.

THE COURT (Judge Wisdom):

And when you use percentage figures, how recent—what study were they based on? How recent were the studies made?

MR. TRIENENS:

These studies in this case were made—

THE COURT (Judge Wisdom):

[8]

They must have been prior to '58.

MR. TRIENENS:

The costs are 1956 costs; the traffic figures I was giving you were based on traffic studies made for the last six months of 1958 and the first six months of 1959.

THE COURT (Judge Wisdom):

No effort was made to bring them anywhere near up to date?

MR. TRIENENS:

There have been no petitions to reopen except one. There was one petition to reopen asking the Commission to reopen in light of the northern merger movements.

THE COURT (Judge Wisdom):

And I assume we may take judicial knowledge of the fact or of the certainty of the development of the South in the intervening 9 or 10 years since the studies would show that relatively the South is better off. Is that correct?

MR. TRIENENS:

I'm sure that with the elimination of certain—

THE COURT (Judge Wisdom):

Certainly Florida, Georgia and North Carolina have had a great industrial development.

MR. TRIENENS:

There is a development; there is an evening out and decentralization of industry and the South has benefited.

[9]

The North has grown, but the South has grown faster. There has been a greater demand—

THE COURT (Judge Wisdom):

But all your figures are still, I say, based on pre- or before 1958?

MR. TRIENENS:

That's right, before 1959 for the traffic.

And those same figures—some of these relationships stay the same. For example when we say that the traffic is six per cent of the North, the North still has a huge volume of intra-north traffic. The North is still a huge industrial area. There is intra-north business; there is north to the west business; but the north-south traffic was then six per cent of their business and there is no reason to believe that it has radically changed since then, that relationship.

Now, our problem is that the costs that are before the Court and before the Commission are averages. I want to suggest that several aspects of these averages led to this inflation. Now, the commuter aspect is one of several. I think the legal issue, the legal errors run like a thread throughout.

THE COURT (Judge Wisdom):

Is there anything in the record to show what is the percentage or the ratio of the commuter passenger deficit to the total amount?

[10]

MR. TRIENENS:

I don't think in quite that form. We put in the record some studies, and of course we are not in a position to go out and make studies of the Boston or New York commuter service, but we had the benefit of studies that were made for Congress by the northern railroads when they were going to Congress saying that they should be relieved of this—or that they should be given a subsidy at the time—

saying that whoever paid for it, they shouldn't. So we had some facts as to what this commuter business was like, and used those facts in making the adjustments to exclude the commuter service that we made and advanced on the record.

THE COURT (Judge Wisdom):

Are copies of the transcript of the hearing in evidence?

MR. TRIENENS:

Yes, sir, and the testimony of the witness De Butts and the testimony of the witness Remington talked about the principles and about the mechanics respectively and is all in the certified record.

How did it all happen? And I want to direct myself specifically to the commuter, but I also want to show the common thread running through these several matters. These all arose from the use of an average cost formula. I want to make it perfectly plain to the Court that we are not going to ask this Court to review the accuracy of any Commission cost formula.

[11]

The point is that the formula used embraces the whole territorial average figure, and that was the intent. Now, we have cited in a footnote in our brief, and I want to emphasize at this time, that the case in which this cost formula was used rail form A, the case in which that was first promulgated was the class rate case, 262 ICC 588.

THE COURT (Judge Wisdom):

You don't have to read the citation.

MR. TRIENENS:

They made it perfectly plain that the intent of the cost system, the purpose of it all, was to measure territorial averages.

THE COURT (Judge Wisdom):

What is the case you referred to?

MR. TRIENENS:

It's the class rate case before the Commission, page 588. The intent was to measure territorial average conditions. Now, that's grand; we are not attacking here the accuracy of that formula to measure what it was intended to measure.

Now, the first thing that it seems to us that you do in one of these cases, under the Chenery principle and otherwise, since the Court is not here to decide the case at large, but the Court is here to review the lawfulness of what the Commission did. So the first thing that you have to do is find out what grounds did the Commission itself rely upon; because

[12]

if that ground cannot be supported, it isn't for this Court to start over again and decide the case if the ground the Commission relied upon is unsupportable, or it was not supported by adequate findings or substantial evidence, back it goes before the Commission to start all over again. The first thing we have to do is go to the Commission's report and see exactly where the ultimate order came from. Now, they make it quite plain, their scales come from the costs, nothing else—from the costs. What do the costs represent? Are they supposed to represent some big old broad average of everything, or are they intended to represent in this case the costs of this north-south traffic that is at issue—the cars going from New Orleans to Cleveland, for instance. Well, this is also made plain by the statement in this case. They say that the costs they are concerned with are the costs of the parties reflecting their respective operations as to this traffic, this traffic, the north-south traffic. On

page 50 of the report and again at page 26 they said "the costs which are attributable to the traffic at issue." This traffic. Page 56, "the purpose is to measure the cost of services under the line-haul rates to be divided",—the north-south traffic. So the first point that we reach is: given what the Commission said its exclusive basis was, and given the kind of costs they set as the standard, the cost of north-south traffic, does the ultimate

[13]

order respond to that in the sense of being supported by findings and substantial evidence? That is the first thing we have.

THE COURT (Judge Hunter):

Is it your position that if the Commission's order was based on specific traffic involved, or do you concede that it was based on passenger traffic as well?

MR. TRIENENS:

Here is the problem. The stated standard is cost of this north-south freight traffic. That is the standard they stated.

THE COURT (Judge Hunter):

You are saying that what they said is that they considered the standard as nothing else than the specific freight traffic?

MR. TRIENENS:

That is what I understand that they said.

The purpose is to measure the cost of service under the line-haul rates to be divided. That is what they said.

I would also say that when you get right down to the specific areas where the inflation arose, they didn't do that; they didn't follow their standard, and the specific elements from which the inflation arises are not under that standard,

they are not rationally supported by reasoned findings and they are not supported by substantial evidence as to the

[14]

cost of this traffic. I also want to make it plain before I go into anyone of these individual ones—commuter or otherwise—we are not talking about northern railroads costs across the board; we are not talking about generally how much it costs to pay engineers, or how much it costs to pay crews, or how much it costs to pull the train, or how much it costs to maintain the roadbeds, or how much it costs to maintain the buildings; the reason we are not talking about that is that is not where the inflation came from. Most of the costs taken together aren't any higher in the north than they are in the south. It's because of several specific areas that this inflation arises. They get the ten per cent higher line-haul because some things are thirty-two per cent higher, some are eighteen per cent higher—a couple of these averages are very high, the Commission used them, and this is what accounts for the inflation.

Now, the Commission in its Appendix B did take those up item by item, so they recognized they had to deal with them. Now, I will get to several of them to try to show that there is a common thread cutting across this. I will deal with several of them to show that the Commission's approach was unlawful, that there is no support for the inflation as prescribed.

Now, the first one we discussed in our brief, the one I talked about is the commuter problem. Here we have to dif-

[15]

ferentiate the problems of the passenger service as exists in connection with freight service, and that which is separate. By "separate" we use the phrase "solely related", which is a phrase that means it is solely related to commuter, sep-

arate tracks, separate buildings, separate everything. We take a southern railway out of New Orleans to the north. It goes across the Lake Pontchartrain. Freight trains go across the bridge and passenger trains go across the bridge. If we didn't have any passenger trains at all, we would still have to maintain the bridge, it's a common cost. Now, if the passenger train pays for the maintenance and contributes toward it, that is wonderful, it should, and under the Commission's formula it does; if it can't, we have to maintain the bridge anyway, so it's entirely proper and we do not attack the idea of embracing passenger deficits measured on a fully distributed sense in maintaining the bridge. We don't take any quarrel with reflecting that kind of passenger deficits in the cost of freight traffic, becuase if the bridge was there and the passenger train wasn't going over that bridge, we would have to maintain it anyway for the freight. The only problem we raised before the Commission was what we regarded and what the northern lines told Congress they regarded as a separable part of their operations, namely this commuter business. And I emphasize the separability, because it does differentiate the problem.

[16]

Of course, the northern lines take the view that the southern passenger trains don't even pay for their own solely related costs, if that be so, we dealt with that in our brief, the answer is take it all out, and we would be ahead if they took all of the deficits on solely related costs out.

But now the question is: why do you charge any of these costs of these solely related commuter costs to north-south freight traffic? Why? Now, we don't reach the question that your Honor posed this morning. We have not reached the question of whether they have the power to do this. The reason we don't reach it is this: The commission had a long investigation about what they should do with

passengers. The Commission, as a matter of policy, one of their policies—the Commission recommended to Congress that as to commuters, the States and local communities ought to support their own, and we are not attacking that policy, we think it is sound. The question is why did they depart from it in this case.

THE COURT (Judge Wisdom):

Is that policy enunciated by the Commission other than in the hearing?

MR. TRIENENS:

It was announced by the Commission in its findings in the so-called passenger deficit investigation, the report was issued in 1959; it's one that has been announced again recent-

[17]

ly in what the Commission said about the Penn-Central merger, it's a policy which a number of northern communities have acted upon to undertake to cure this problem.

THE COURT (Judge Wisdom):

What is the title of the report?

MR. TRIENENS:

Rail Passenger Deficit Investigation.

THE COURT (Judge Hunter):

Is that cited in your brief somewhere?

MR. TRIENENS:

Yes. Railroad Passenger Deficit Investigation, 306 ICC 417, the particular recommendation is on page 483.

Now the reason we don't think we get to this question of power here, and I don't think we ever will, gets back to this: the Commission has here found north-south freight

traffic costs are the same; the Commission has also found as a fact that many, using the words of the Commission, many tracks, yards, stations, and other facilities are solely related to commuter service. Given that standard and that finding of fact, what is the rational basis for attributing any, any solely related commuter costs to the north-south rates? Before you get to the power, the duty of the Commission is to state the reasons or bases for its decision, and failing that, the duty of the Court, we believe, is to set the order aside and send it back to the Commission to do the job.

[18]

Now, when it gets back, it may well be that this issue will vanish from the case, and the question of power will never be raised again and that is why we didn't reach it.

THE COURT (Judge Hunter):

Sir, you said earlier, when you set forth the standards, general standards are what the Commission sets them out to be. Do you agree with that standard?

MR. TRIENENS:

As far as—

THE COURT (Judge Hunter):

I mean do you think it should be limited to the specific traffic involved, as you say the Commission did?

MR. TRIENENS:

We argued the case before the Commission and took the position throughout on these cost issues, that the cost of this particular traffic were a test of the fairness of divisions, if—and only if—and we spent the whole case litigating these questions or areas of inflation—if it is proved that somebody has higher costs; we said as to each of these

items that we have to prove that it's for other reasons. Now, when you get to that point and you show the higher costs, we believe we did show it for the south, because of the apparent lack of industry at this time, we felt that that would be a proper standard to use. Now, we recognize also, a matter that counsel for the intervening plaintiff will go

[19]

into much more directly, that there is a general policy question of whether you should depart from uniformity. In the past the Commission had always let the measure of the rate, equality of the rates govern the share that the railroads took and we feel that that policy is strongly imbedded in the practices of the Commission and again there is no rational explanation to depart from it. We think there is no real difference between these two for these reasons, that if you get down to the inherent cost of these several railroads, north and south, there isn't any difference, they are all hauling the same cars over the same size tracks, buying our engines from the same places, there is no showing of any great mountain ranges that they have that we don't. We think that if there are any differences, that we don't believe have been shown, as to what is in fact the cost today, we think the cost is transitory; there is no inherent reason why it should cost any more to haul a car across Ohio than it costs to haul one across Tennessee or Mississippi. So we don't think there is a great difference how you go at it.

THE COURT (Judge Wisdom):

You say the Commission has departed from its standard of policy. Is there anything wrong with the Commission reaching the conclusion that its former policy was wrong?

MR. TRIENENS:

No. There is nothing wrong with it, but if they do it,

[20]

if they do it, they have to explain why they do it, so if it goes beyond their power, you can then attack that in Court and you will know what policy it is they are adopting and you can contest its legality. And also, if they state what they are doing and Congress doesn't like it, they can change it.

But I don't think there is anything wrong with the Commission changing, but in the first place it has to make findings as to what it is doing, and its burden to make findings is all the greater when it has previously announced a policy like the commuter deficit policy, or the uniformity policy, and then it changes, its duty is all the greater to tell the Court what it is doing.

THE COURT (Judge West):

Is it your position that the only improper inclusion by the Commission was the commuter deficits?

MR. TRIENENS:

No, sir.

THE COURT (Judge West):

What else was included improperly besides the commuter deficits? The reason I ask is that I understood you a moment ago to say that rates and divisions should be based on uniformity of traffic involved, the rates to be divided, and the cost of hauling that particular freight. What else should be included, if anything?

MR. TRIENENS:

[21]

Now, another item—this is something different only in this sense, it is proper to include the cost of so-called interchange handling. Now an interchange is when we take a car from New Orleans to Potomac Yards and Southern gives it

to Pennsylvania Railroad, a switching service is called an interchange. It's proper to include in costs the cost of an interchange handling, but what isn't proper here and not supported by any evidence whatever is to use a cost fifty-eight per cent higher for the service performed by the northern railroad in the same Potomac yard in handling and interchanging the same cars, on a record that shows that the costs at that particular place are identical.

Or if you go to Cincinnati, L&N to Cincinnati, and Central beyond, they use a cost fifty-eight per cent higher just because it's a territorial average for the northern road handling the same car at the same terminal area, when such evidence as there is on the subject shows that the services are equal and there is no evidence whatever to show that they are any higher.

We don't object to their including interchange costs in a cost formula, but we do object to the use of territorial averages fifty-eight per cent higher where there isn't any evidence showing it was any higher, much less fifty-eight per cent higher. That is typical we think of the lack of substantial evidence.

[22]

It also raises the kind of problem that the Commission never did undertake to explain with any reasonable findings as to why or how the costs could be any higher for the northern lines for the north-south traffic; nor did they explain why the northern lines shouldn't have the burden of proving and coming forth with evidence that the cost of interchange in the north-south traffic was higher.

THE COURT (Judge Wisdom):

Now, is that an indirect result of using the commuter costs in the total figure, in the end figure? I mean the interchange costs.

MR. TRIENENS:

Is this the indirect result of using—It's the indirect result of using an average and applying it to a situation where there is no evidence that this average relationship of fifty-eight higher has any factual application.

THE COURT (Judge Wisdom):

That would be true with any average, would it not? That is the reason we use an average to get away from adding all the actual costs.

MR. TRIENENS:

One of the reasons you get away from the average is if the factual situation you are measuring—in this case, we believe north-south traffic you should not use an average of something else. It's all right to use an average if you

[23]

made studies of all north-south traffic, but you can't take an average of something that is white and apply it to something that is black.

THE COURT (Judge West):

That is the reason I asked you about what should not be included. Now which is it, the inclusion of the interchange handling or commuter services in the territorial averages that made that figure fifty-eight per cent?

MR. TRIENENS:

No, I don't believe it's the averaging of the commuter services. All we know about this is that the north has a lot of traffic that interchanges with western lines at Chicago, interchanges within itself at Buffalo, and interchanges across New York harbor. Ninety-four percent of their business is somewhere else. Now what they do with that, what the costs of all that are, controls the average; that is why

the average gets the way it is. We have nothing to do with that. But then they come down to these border interchanges and bear in mind this is a border interchange; that is a separate element that the Commission itself built into this scale.

THE COURT (Judge Hunter):

Did you consider a statement by the Commission that the differences between the parties as to the cost evidence runs to the degree to which the territorial average costs should be modified to fit the specific traffic at issue as

[24]

being a fair statement of the differences?

MR. TRIENENS:

I think it states it the other way around. I think the way we went at it was: "You claim your costs are higher, we put in evidence to show it was as to these critical elements which accounted for the inflation." We said there is no proof, no basis for thinking—lots of basis for thinking the other way around—that these averages which have inflation, show anything higher as to this traffic. Now, they come around and state it that way, which I don't think quite states the issue as we were presenting it to the Commission.

The question is that a fellow comes in and he wants an inflation—

THE COURT (Judge Hunter):

You agree if there were territorial averages that you would make adjustments for it, wouldn't you?

MR. TRIENENS:

We would—unless we could prove that the cost for a particular element was higher in the south, unless we could

do that, we felt we would be stuck with the territorial averages. And we did. We isolated out, one of our cross exhibits, isolated out the parts of the territorial average costs that accounted for the inflation. Why were northern costs higher? Are they higher because they are ten per cent higher on everything? Oh, no, we isolated out those elements

[25]

which accounted for the inflation, and those are the ones we have been litigating about, those particular ones.

For example, another one, these car costs. These costs on the average are about thirty-two per cent higher in the north. There is no doubt the average is thirty-two per cent higher; we are not challenging that as being the average. That is what the average is. The average is a mixture of hopper cars carrying coal, and L&N cars on the Pennsylvania that is not at issue in this case; it involves west-east cars that is not an issue in this case. We don't claim that the average is not thirty-two per cent higher, we say that there is every reason to believe, and no basis—no substantial evidence to the contrary—that the cost of handling the same car from New Orleans to Cincinnati is any higher per mile in the north than it is in the south.

So we think we told the Commission how come. We think we told the Commission why that is a result of the per diem rental offset against the car cost, and there is no doubt that a car renter, a fellow who rents cars, shows very low cost. So what has that to do with north-south traffic?

We have gone through their findings and analyzed them and we think we've shown why the average got there for reasons that don't have anything in the world to do with north-south traffic. But whether we are right or wrong about whether we proved our case, what is the rational finding? What is the

[26]

evidence that supports a finding that the costs are thirty-two per cent higher per mile to haul the same car a mile in Ohio than to haul the same car in Kentucky? Was there any evidence to support it? Well, it's an average. That's all right, we are not saying the average is not accurate, but what is the substantial evidence as to this traffic, which is supposed to be the standard?

Now, I won't try to go through each and every one of these, but I do want to show that this thread goes through a number of these. Now the last one I'll mention is this empty return business.

Assuming all the costs were equal, everything else is equal, the northern lines would show higher costs in this formula because it hauls more empty miles per loaded car on this average, and we don't deny that. The average studies show that the northern roads haul more empty miles per load than the southern do. How come? That doesn't seem to be very efficient to haul more empty miles than the other fellow. Why is it? Is it inefficiency? Something inherent in all traffic in the north? Is it something that is caused by the north-south traffic in the north? We searched this Commission report in vain for any explanation as to how this empty hauling is any higher in box car traffic in the north than in the south. We came along and we undertook to show why it happened, because this average is an average of unlike things.

[27]

There are some cars in there that are special, hundred per cent shuttle cars, they shuttle empty-loaded, back and forth, back and forth between the auto assembly plants and the auto parts plants. So that kind of car will have very high, hundred per cent empty return, even though all other box

cars are floating around the territory say thirty per cent. When we average these together, obviously the fellow with most of these shuttle cars will have the highest average. We said if that is so, it ought to show up in Detroit, and lo and behold it did.

Now what did the Commission say about all this. What finding did they have to show why the empties are higher in north, and what did they say about our Detroit figures? Oh, that may be a coincidence caused by some unknown factor. Who in the world would know? The northern railroads. Yet the Commission goes right ahead and uses the average of quite unlike things and comes out with a higher average and applies it to the north-south traffic without any showing how it can be properly applied. There is no substantial evidence to support a higher empty return in the north-south box cars. Now, the same reasoning applies to the refrigerator cars.

I don't want to go through each of these items, but I do want to indicate that besides the commuter problems, there are these other elements, problems, legal problems which are essentially the same: the lack of substantial evidence to show

[28]

that the services are any higher on the north-south traffic. We are not asking—at this phase we are not asking the Court to depart from the Commission's own announced standard; we are simply asking for a finding of whether there is substantial evidence to support this inflation.

Now, we think perhaps that one of the reasons, practically, is that the Commission didn't pay attention, as required, to what we call typical evidence. Now typical evidence is nothing more than evidence relating to individual rates as we have been talking about. If they had thought about the problem from New Orleans to Philadelphia or

New Orleans to Cleveland, if they had thought about this traffic, then we think they wouldn't come to the really unsupportable use of these averages.

But whatever the cause, the net effect of all of these critical cost issues is that inflation does rest on averages, and when you bring in something extraneous like commuter service, you are bringing in something that has nothing to do with the traffic, or when you bring in the interchange you are bringing in something that has no rational relation to the particular cars or empty returns, and they apply these averages to north-south traffic when there is no supporting evidence.

Now, I realize, and I want to make this perfectly plain to the Court, that we realize that the factual questions are

[29]

for the Commission. We also know that the Commission is the expert on costs, but we further know that any time you take costs, a sort of fog envelopes the whole area and things become obscure and there is a tendency on the part of all lawyers, and I don't exclude judges, to say, "We will not get into costs." We don't want to have the Court take in costs in that sense. We do know however that Congress in the Administrative Procedures Act made it perfectly plain that the discretion of the Commission is not unfettered and there is such a thing as judicial review and that judges do have duties.

We also know from our experience in recent years that this Administrative Procedures Act is intended to have teeth. And the word "teeth" is one that I picked out of Judge Doyle's opinion in the case out in Colorado. We think that these errors—we have discussed the lack of substantial evidence, and the lack of reasonable findings—we think it is perfectly plain what the Commission did and what they failed to do and the Court will thoroughly under-

stand these points. We want to go along, but when the lawyers don't understand what the Commission did, is that a ground for upholding the Commission or is that a ground for setting it aside?

Now, we had a number of cases in this area—reasons and bases must be clearly stated according to the Administrative Procedures Act—held that the necessity is greater—the necessity for stating the reasons is greater if the

[30]

matter is complicated. It doesn't make it less important, it makes it more important. As Justice Cordozo once said, and the Supreme Court has repeated many times, the Court must know what the decision means before it becomes its duty to say whether it's right or wrong.

In our reply brief we cited a recent decision of the Court of Appeals of the District of Columbia on the government of Guam. The case we cited at pages 26 and 27 of the reply brief; we didn't have the Federal Reported citation, the citation is 365 F(2) 515, that case involved—

THE COURT (Judge Wisdom):

What is the citation?

MR. TRIENENS:

It's 365 F(2) 515. The case involved a finding problem involving a fairly exotic area of cost per working capital—a lot more difficult than this case, but the Court insisted that the Commission make sense on the subject. It must be adequately supported with reasonable findings. The numbers didn't make sense to the Court, and they were required to make sense or it would be set aside and remanded. It's the sort of thing involving the elements of a cost formula that we have before this court.

THE COURT (Judge Hunter):

Sir, you say you have no quarrel with the standards as set forth by the Commission. Do you consider that that stand-

[31]

ard as set forth by the Commission—do you consider that standard permits consideration of passenger deficits?

MR. TRIENENS:

Permits consideration of passenger deficits upon a finding that they are common with freight service and properly a part of freight service, like the question of Lake Pontchartrain bridge, it's used in common and must be maintained in any event for freight service.

THE COURT (Judge Hunter):

And to that extent you agree with the Commission that you should consider suburban commuter traffic?

MR. TRIENENS:

Yes, sir, and the Commission found—

THE COURT (Judge Hunter):

Do you think the case ever got that far? Of course, if it's common it doesn't make any difference.

MR. TRIENENS:

That's the point. You see, the Commission said there are some things—they don't say how many, they never did—they say many items are solely related, other items are common. Now, we would agree that if there was a factual showing by the northern railroads which has never been made as to the part that is common, it has the same effect as this Pontchartrain bridge—they need the tracks there for the freight service, well, then that would be a comparable situation, and

[32]

I wouldn't quarrel with it, but when there are many solely related items on which the northern lines alone have the basis of showing—

THE COURT (Judge Hunter):

Do you quarrel with the fact that the Commission did not set out precisely these common costs? I am talking about the common costs with suburban and suburban-commuter traffic.

MR. TRIENENS:

Yes, in two senses, one of them is that on this record I don't think they could have set out precisely that factor. We put into this record everything we could lay our hands on, including the study of the northern railroads had made. We put in this in our effort. They were given an opportunity to reply on this subject as to the separation of factual matters involved, but they remained silent. Now, we have quoted in our direct evidence this very point that we have got in our brief on the northern roads going to Congress, and they said that one of the common fallacies and misapprehensions in this business is that these matters are common; that there was a wide misunderstanding by the public, and they say it is a false belief that they use primarily those facilities which they must have and maintain for their operations. The northern railroads are telling Congress that there is a wide misapprehension on it.

THE COURT (Judge Wisdom):

[33]

I can't help repeating our feeling, however, that present in this case is the fact that we don't—that in the South we do not have passenger service reflecting the development of suburbs and commuters going to New York or

going to Boston or Philadelphia, and shouldn't it make a difference that there is a cost, even if it is a common cost, in the North that is not a cost in the South?

MR. TRIENENS:

I couldn't agree more with that. The only problem it raises at this posture of the case—

THE COURT (Judge Wisdom):

That is not only a question of power, but it is also a question of policy in that it goes to the rationality of the Commission's decision.

MR. TRIENENS:

I agree with that. The only qualification that I have on that is timing. I don't believe, personally, if this case gets back to the Commission for them to state how they reconcile what they did here with the policy of putting this burden on the local area, and if they have to state this rationality about common cost, we will never hear of the problem. I don't think that it's necessary for us, and I don't urge the Court to make this a case going to the Commission's power and the reason is that I don't think when they level on it they are going to come out this way.

[34]

THE COURT (Judge Wisdom):

It may be and I still have an open mind on it, and I have not heard from the other side yet, but it seems to me that the question is there, and it's there both in terms of power and in terms of policy and it involves the reasonableness of it.

I am sure that opposing counsel will listen to what I am saying and I expect to hear their remarks from them in a few minutes.

MR. TRIENENS:

The reason I say—I suppose you think counsel will come in here and they want to stage the fight on the question of basic power and that that may be our approach, but the reason I don't do that is not any lack of confidence on this question, but we have had the experience in the last several years—

THE COURT (Judge Wisdom):

I know that sometimes the Courts of Appeal go off on arguments that are not made by counsel and this might be such a case. I understand your reasons, you would rather attack it on policy than on the more difficult constitutional question.

MR. TRIENENS:

No, not policy.

THE COURT (Judge Wisdom):

[35]

Say that they failed to follow their standards, the policy having been set.

MR. TRIENENS:

They didn't face up to the question either on the factual question of how many of these are common or solely related, or if it's a policy question, they should state the reason. I don't suggest to this Court this is a policy question. I'm sure, and I will state in a minute why I feel this way, that if the Commission is required to go back and face up to this question of what it did here and what it did elsewhere, that it will come out right.

THE COURT (Judge Wisdom):

In other words you are saying though that the Commission had a policy which it departed from.

MR. TRIENENS:

Didn't even recognize it.

THE COURT (Judge Wisdom):

You say did not follow even its own standards.

MR. TRIENENS:

In two senses, one its standard in commuter business and the other its standard as to north-south freight traffic, didn't follow it.

THE COURT (Judge Wisdom):

To me the net effect of it is that the South must shoulder the burden of supporting trains which have to run commu-

[36]

ters, trains that have to run for commuters.

MR. TRIENENS:

No doubt that is the effect of it.

THE COURT (Judge Wisdom):

To me that is the important question.

MR. TRIENENS:

There is no doubt that is the effect of it, there is no doubt as to the importance of it, and there is no doubt that the Commission failed to face up to what it was doing, although we spelled that out exactly through the President of the Southern Railway.

THE COURT (Judge Wisdom):

It's impossible for me to believe that the Commission didn't actually face up to it. It's certainly obvious that they did. They are not sticking their heads in the sand.

MR. TRIENENS:

I would like to show why I think that may not be so, and the reason is this: I have been through this routine with them on other occasions, on other subjects, and I would like to tell you just what happens and why we think this is the way it worked out. We had a very technical question, a more or less technical question of scale construction present how the long hauls work, and short hauls; the Commissioner's examiner and technical staff had their theory and their theory didn't make any sense and was never supported by find-

[37]

ings, but they didn't pause over it, they said "Let go and do it this way." We took this out to Colorado, Judge Doyle did not try to tell the Commission what the case should be, he said, "Now you have got this scale, you have got to take it back and you have to make reasonable findings and you have got to support those findings with substantial evidence."

When it got back to the Commission—and now I am talking about the Commission as distinguished from the staff—it got back to the Commission on remand from the Court, the Commissioners themselves—either themselves or through a new group they assigned to it, faced up to that question, and found that the practice they had over the years unlawfully, as they put it, hurt the long haul carriers and they completely changed it around. Now, here you have got a problem, and I am not going to get into the legality of the Commission resorting to the cost test, but what this case desperately needs in all these areas, not just some areas, is not for, we think, the Court necessarily to pass upon the question of power, but to send it back to the Commissioners to face up to this either themselves or through

someone else who has been obtuse to these questions, to look them in the eye, and we think we will get a very different answer if they do. I don't think we will ever see this particular question because I think the Commission is a responsible body. I think if this Court sends it back—

[38]

THE COURT (Judge Wisdom):

I think the Commission has an exceptional record for being a well-run agency, and this is the general opinion of people that are better informed than I.

MR. TRIENENS:

But I think there are cases where the Commission's staff goes along in a particular direction, and I think that the use of averages is irrational and is an unsupported application of their own. This is a question where if they are required to face up to the hopeless incongruities, like the commuters and interchange of cars, they will face up to it, and it will really change the whole treatment, I think, far more, than if a particular issue was picked out and the question of their power to do it.

Now, I want to say in response to the question of whether we accept this standard or not, that so far we have accepted it for the purpose—the cost standard.

THE COURT (Judge Wisdom):

You have used about fifty minutes. Like I said, you needn't confine yourself too closely, but I want to remind you if you want to save some time for rebuttal.

MR. TRIENENS:

I will have about three or four minutes more.

I just want to say, and I think that I can pass this, the other questions that are raised, economic consequences,

[39]

failure of the Commission to face up to the use of cost standard, these matters will be dealt with by counsel for the intervening plaintiffs and therefore I won't pause over that.

The last word that I would like to say is that the only aspect of this order challenged before this Court is this inflation; that is all I have been talking about.

I would like to address myself to the idea that if any part of this order falls, the whole order has to fall. I think that such a course, of course, would be inequitable to the long haul carriers who have been able to convince the Commission that they ought to obtain relief from prior prejudice. This doesn't have anything to do with North versus South, this is long versus short wherever you happen to be; no party has challenged that feature of the Commission's action. We don't think this involves the Court assuming jurisdiction that was not given by Congress; we don't think we are asking this Court to get into the position of having to fix what reasonable divisions should be. The choices are spelled out in the alternatives and in the interlocutory injunction.

Thank you.

THE COURT (Judge West):

Let me ask you one thing: Summing up, as I understand it, your position would be that if these northern railroads

[40]

supported their higher costs and if the Commission had reason to believe they sustained their cost position, then you would say they had the right to issue their decision? You keep saying face up to it.

MR. TRIENENS:

I would like to respectfully avoid some of those assumptions only for this reason: We think if they go back on something like the interchanges, and frankly you can't find substantial evidence to make black white, and I don't think we will ever come back.

THE COURT (Judge West):

I understand. What you are simply saying is that they did not give reasons nor make findings that there was evidence that the excess costs were attributable to north-south traffic.

MR. TRIENENS:

That is it.

THE COURT (Judge Hunter):

I guess you could put it another way: That once you depart from uniformity, that then you have got to state specifically why and on what evidence.

MR. TRIENENS:

That's right. Now, the things all converge in this case. The northern lines are the ones that want the inflation; the northern lines are the proponents in this particular

[41]

case and they have the burden of proof. You can take it any way you want, but either way you come up with the same thing.

THE COURT (Judge Hunter):

But previous to this it was equal mileage, equal pay?

MR. TRIENENS:

If you did half the work, you got half the pay.

THE COURT (Judge Wisdom):

Mr. Knight, will you state your name for the record, please?

MR. KNIGHT:

Nat B. Knight, Jr., Gretna, Louisiana, I am a member of the bar of this district.

Your Honors, interventions have been filed by two groups, the Southern Governors Conference and the Southeastern Association of Railroad and Utilities Commissions. I am a member of the latter group, and I wish to present to this Court a member of the former. He is a very distinguished attorney and practitioner in the State of Georgia, in the Federal and State Courts, as well as the Fifth Circuit and United States Supreme Court. And, at this time, I would like to present to the Court and move for his admission to the bar, the Honorable Carl Sanders of Georgia.

THE COURT (Judge Wisdom):

Governor Sanders, the Court welcomes you to the bar; we are very happy to have you here today, and we feel honored

[42]

to admit you to our bar of the Fifth Circuit.

MR. SANDERS:

Thank you, very much.

THE COURT (Judge Wisdom):

To the Eastern District of Louisiana, I should say, just to keep the courts straight.

MR. SANDERS:

It is a real privilege to be here and I had hoped that I would resume the active practice of law on January 10, 1967, but recently we have had some problems and I might

add that one of my aides has just brought me word this minute, that the Supreme Court of the United States apparently—this is a curbstone opinion because I have not seen it—has just ruled that the Legislature of Georgia will have the power to select the governor. If this is true, perhaps I will have my wish and I will be back in the active practice of law on January 10th. I commend the Court for their wisdom, because otherwise we might have gone on ad infinitum in my state with elections.

I might say, too, that I have had the privilege of being governor for four years and I am delighted to appear in front of this distinguished tribunal to advocate the elimination of discrimination. I have done that on other occasions on other matters and I am glad to do so in the freight rate divisions factors.

[43]

I have been the chairman of the Freight Rate Committee of the Southern Governors Conference for four years. In that period of time I have had the privilege of trying to keep up with some of these problems in the South. I am not going to make a political argument here this morning; I am not here for that purpose. I am trying to logically and reasonably give my reasons for why I think this ICC Commission order should be remanded.

I feel like, first of all, that we should go back for a few minutes, if I might, to recall to the Court's attention that in 1934, the Southern Governors Conference was formed on the burning issue of freight rate discrimination. That is how the Governors Conference started. In this present case, throughout the hearings before the ICC Commission, our Conference and the Southeastern Association of Railroad Commissioners and Utilities Commissioners were represented by special counsel Mr. Rubin Crim of Atlanta. Mr.

Crim as you probably know lost his life along with many others in this awful crash that was in Paris.

And so today, at the request of my life-long friend, Mr. Walter McDonald, who has been a commissioner of the Public Service Commission in my State for more than forty years, and who is in this courtroom today, I have been asked to come and make this argument for the Commissioners and for the Southern Governors.

[44]

I want again to say, if I might, to the Court that I honestly and sincerely believe that there is no issue today in our country, and particularly in our Southern part of the country, that is more important to the citizens of the South than to try to rectify the order of the Commission in this case, because we feel if it is allowed to stand and allowed to remain, will recreate that age old division of North versus South.

I think, too, that if this Commission's order is allowed to stand, it reimposes that artificial barrier, the barrier that I think the Court is familiar with, the barrier which we feel is as formidable as the Great Wall of China, and which was finally toppled in the landmark decision of the United States Supreme Court in the case of New York versus United States almost twenty years ago.

Gentlemen, if the Court pleases, the question, of course, is a matter as it now stands of some sixteen million dollars that will be required in dollars and cents that the Southern railroads and the Southern people in my argument, I would say, would have to pay. The question of inflation on the South, the question of this money I might pose this question: What would it buy? What does it mean to this part of the country? For instance we could with this sixteen million dollars involved in this litigation, we could purchase 640 Big John Hopper cars to bring feed to our growing livestock

[45]

industry; we could purchase over eight hundred fifty seventy-ton fifty-foot box cars to carry our manufactured products to the markets of our country. We think this is of paramount importance, but above and beyond this question of money, we think the real issue in this case this morning is a matter of principle and is not really a matter of money.

The Southern Governors I might point out, and I think this is very important,—the Southern Governors did not intervene when adjustments were made in divisions to reflect uniform rates. We were asked to intervene when this was done, but we did not intervene when judgment was granted in those cases. However, we feel this morning that we have a very different situation; we have here before this Court the very life blood of the South, and that is uniformity of rates. Once this principle is abandoned, we feel that it is being abandoned in this case, there will be nothing to hold on to. For those for whom I try to speak today, I might also point out, that they have defended the citizens in the South in their fight for uniformity of rates and for rail transportation—uniform rail transportation rates for nearly thirty years.

We might go back to 1937 when we begin there with the Southern Governors Commodity Rate case; that was continued on into the halls of the Congress of the United States and it resulted in an amendment to the Interstate Commerce Act

[46]

of 1940 when they established in Congress the policy which I quote "the maintenance of reasonable charges for transportation services without unjust discrimination, undue preference or advantage" and they added to Section 3 Sub-Paragraph 1 of the Interstate Commerce Act that specific provision that it shall be unlawful for any common car-

rier to make, give or consider, any undue or unreasonable preference or advantage to any region, district or territory or subject any particular region, district or territory to any unreasonable preference or disadvantage in any respect whatsoever.

Now, on the 3rd of February, 1965, in this case, the Commission, as we already know, they prescribed a new division formula; they prescribed a formula that gave the Northern railroads forty-five per cent more than the Southern railroads for each terminal service performed; they gave them ten per cent more than the Southern railroads for each mile line-haul service performed, the sole basis of that order, according to our interpretation was a finding that the Northern Railroads incurred a higher cost for handling of the north-south freight traffic.

The finding of the Commission in this case did not attempt—I repeat, the finding of the Commission in this case did not attempt to dispose of the issues that were raised by the Southern Governors or the Southeastern Association of Railroad and Utilities Commissioners.

[47]

The Commission simply assumed that the cost differences reflected inherent differences in transportation conditions, such differences as would allow the abandonment of the principle of uniformity and they thoroughly ignored our contention that even if inherent differences in transportation conditions did now make rail services in the North more costly, then the burden should be borne by the northern shippers and should not be imposed upon the Southern economy.

It appears to me that the Commission in its efforts—I say this not facetiously—may have attempted to arrive at some conclusions and in arriving at those conclusions they have tossed the baby out with the bath.

I would like to pause here, if I might, and point out if I might to the Court, that if you look at the Webster Dictionary, and you look at the definition of the word "inherent," when we talk about inherent territorial disadvantages in the North as compared with the South—I just simply would like to point out that the simple definition of the word inherent is defined as being involved in the constitution, the essential character of something. And we believe it is very obvious from the record in this case, that the cost differential between the north and the south does not arise from any inherent territorial disadvantage, and it is not involved in the constitution or essential character of the territory. Our specific grievance to the Court this

[48]

morning is that the Commission examiners and the Commission itself refused to face up to the questions and to the issues that we raised. We contend that under the law that they must deal with these before a proper decision on divisions could be reached.

The basic question in this case is whether or not there had been any showing in the case sufficient to abandon the principle of uniformity. Now, in our view there are no differences between the north and south which would justify an inflation in the northern railroads' division.

Certainly the cost differences relied on by the North do not prove such a justification even if differences really exist, and this seems to us to be doubtful for many reasons already discussed by counsel for the southern railroads; such differences reflect not inherent differences between the territories, but they reflect temporary situations which will be evened out by the normal working of economic factors if these forces are not restrained by artificial factors.

In my preparation for this appearance this morning I went back and not only read the briefs, not only tried to

examine the record, but I went back and read an address by Mr. Walter McDonald which was made before the Southern States Industrial Council on December 10, 1941. The subject of Mr. McDonald's address at that time was, and I quote, "The South's Industrial Economy in Relation to the

[49]

Pending Class Rate Investigation." In his magnificent dissertation, Commissioner McDonald very clearly set up example after example of industries in the north and industries in the south, and he set up the vast differences in the frieght rates for similar hauls to and from their respective territories. In that particular discussion he quoted Mr. E. R. Oliver of the Southern Railway System, who was vice president at that time and who had this to say twenty-six years ago as to the policy of the northern railroads—and I quote: "The policy is to build a rate wall at the Ohio and Potomac Rivers which will prevent or greatly curtail the movement of southern products into official territory."

And then we respectfully contend here this morning that if this same policy which we contend is being re-established under this order of the ICC Commission, that this policy will be re-established by this present order, if that present order is allowed to stand, and we would like to see that order remanded.

In another paragraph in that address, if I might please the Court, I would like to quote from one of the ablest lawyers in this land, who was then a United States Assistant Attorney General, that was Thurmond Arnold. Mr. Arnold, who in his discussion of monopoly in the south, I think, that he summarizes the crux of the South's economic problems

[50]

very clearly, and here is what he had to say: "The indus-

trial East had been the mother country; the South and the West have been the colonies. The colonies have furnished the mother country with raw materials; the mother country has been exploiting the colonies by selling them manufactured necessities at artificially controlled prices. The industrial East has been the source of both capital and organization to develop the South and the West. Under such conditions, it has been natural enough that the South and the West have been developed in the way which would contribute the most to the domination of the Industrial East. Whenever it has interfered with the Eastern Industrial Domination, the competitive energy of the South and West has been stifled. Local independent capital in the South and West have been gradually disappearing; local independent enterprise have been under a constant handicap. How all this happened is a complicated business."

THE COURT (Judge Wisdom):

Is there any evidence in the record which would show what effect the order might have on the northern and southern areas?

MR. SANDERS:

I believe that there is some evidence in the record that would show that it would have some effect on the location of new industries into the South, yes, sir.

[51]

And I want to cover a point of economic factors that you raised in just one second.

To finish this, Mr. Thurmond Arnold said that "big business has treated the South and West primarily as a source of raw materials, not as a place to manufacture or sell finished products at competitive prices. This is the age-old principle of colonial empires; it is dictated by the

necessity of keeping up the dividends in the mother country against cheaper local competition in the colonies. The methods of maintaining control of industrial markets in the South and West are based on the power of tightly organized cartels to control supply, transportation and distribution in such a way as to put new competing enterprise in the colonies under a continuing handicap." End of his quotation.

Now, if the Court pleases, I would like to simply say that fortunately for us today, as Margaret Mitchell said in her very remarkable book, the days that Thurmond Arnold talked about are "gone with the wind." And I feel like today in the South, that you and I live in, the New South, that we have no desire to feel the force of these winds ever again. In this case, the North's reliance on an example of—a classic example of a temporary situation was the question of higher wages, and higher taxes in the North. This is one of the things that they relied upon, and certainly we cannot say this morning that this is an inherent difference

[52]

in the territory to the extent that if wages and taxes are higher in the North, I respectfully contend that the North is better off, not worse off, than the South. If their wages and taxes are higher, then they are better off than we are. And we hope in the South as you have pointed out to catch up; the South has been trying to catch up, but we are just like Alice in Wonderland, we're having to run twice as fast as the North in order to maintain our position and gradually improve, and we certainly will never be able to catch up, will never be able to deal as an equal with the North, if we are going to allow money to be siphoned off of Southern Industry, to subsidize a higher level of wages and taxes in the north. The North today has an unquestioned overcapa-

city of railroads. The northern lines have not managed their affairs with the same diligence and with the same business acumen as the southern lines. All of this is quite evident from the record in this case.

I respectfully submit that there is no reason and the Commission gives none for the South subsidizing the North to enable it to maintain an overcapacity of rail plant. The obvious cure is to cure the situation itself, not—

THE COURT (Judge Wisdom):

When you say rail plant, do you mean with regard to the movement of freight?

MR. SANDERS:

[53]

Yes, sir, I mean with regard to moving freight; I am excluding the suburban deficits.

THE COURT (Judge Wisdom):

Obviously there is an increasing need for more trains for handling the commuters.

MR. SANDERS:

Yes, sir, of course, we do—

THE COURT (Judge Wisdom):

The South is developing more and more suburbs and—

MR. SANDERS:

If the Court please, the question you asked earlier, it's true that today we do not have the same problem, at least to the same degree as the northern suburban commuter passenger service, but if the Court pleases, I am sure that New Orleans is in the same predicament that Atlanta is in. We are right now in the process and I have just recommended for the first time, a budget appropriation for rapid transit

in Georgia. We don't feel that the South as you pointed out—that the South should be sitting down here subsidizing the operations of the northern commuter passenger service. This is one of the great factors involved in this case that we have here this morning.

Now we know today, too, in the north—and I will just mention this to you—we think that the cure to the situation is for the northern railroads to do something about it;

[54]

to try to cure it. We believe they are trying to do something.

THE COURT (Judge Wisdom):

It seems to me it may be in the national interest that we handle their transportation. Perhaps the problem is bigger than either the north or the south.

MR. SANDERS:

Perhaps it is, sir; perhaps it should be spread nationally, nationwide; it shouldn't be taken out of the South just for the benefit of the North. We think that it should be something that the Congress of the United States should and apparently they are going into it, because as you know they are appropriating money for all sections of the country now who are going into rapid transit.

We don't think that in this particular case that the northern railroads should come down here and actually take out of the hide of the southern people sixteen million dollars, much of which is going to be related to these passenger deficits by these commuter services that they render the north.

THE COURT (Judge Hunter):

Governor, as I understand it, your colleague said the relative service cost is the decisive measure here in determining this decision.

MR. SANDERS:

Yes, sir.

THE COURT (Judge Hunter):

He says it's the relative measure. He says there are no

[55]

cost differentials, and if so, the Commission didn't point them out. Is that really the South's case?

MR. SANDERS:

We don't think the Commission pointed out any of the cost differentials; I agree with that, but we also think that it was pretty obvious from the position we took in asking them to consider certain items of cost and certain factors; and the Commission in our particular instance, they ignored our position altogether in this case. They have failed to make any findings whatsoever on the intervention and on the points raised by the intervenors by the Southern Governors and by the Southeastern Utilities Commissioners at all. They simply ignored us; they treated us like an illegitimate child at the family reunion; they didn't know who we were.

THE COURT (Judge Hunter):

Could I say, then, that as far as you are concerned, that when they depart from uniformity in such an important matter as this, they should spell out precisely the reasons for it?

MR. SANDERS:

Yes, sir. That is correct.

I want to point out the reasons why I think they are

[56]

in the North trying to do something about the problem. As we know there are many important mergers that are taking

place; there are many important consolidations taking place. In the Penn-Central Merger, the Commission itself pointed out that it expressly relied upon an over-capacity of rail plant in the north in the Penn-Central Merger; this was one of their reasons for recommending this merger. So we respectfully contend that the error in this case before you today is that the Commission has inflated the northern railroad divisions and they have said this, that when mergers are consummated and the cost savings reflected, then and only then will this Commission reflect this situation in the divisions of the railroads. This is certainly no answer to our situation.

If we as Southern Governors have urged, and we have urged, and the Commission has found in the Penn-Central case higher costs in the north, this is due to an over capacity of rail plant in the north, then there is no basis now or forever for requiring the South to subsidize such over-capacity through inflation of divisions. We also raise the question in this case as to whether, even if the north does suffer from cost disadvantages as compared with the south, the burden of those disadvantages should not be placed on the south. Our southern economy has lagged far behind the north, and although we have made giant strides since World

[57]

War II, it still lags behind the north, and much of it has been due to the discriminatory freight rates that were suffered by the south until after World War II.

I don't have any figures beyond the '58 year either, but would just like to point this out, sirs, from 1947 to 1958, the number of employes in the South increased twenty-eight per cent.

THE COURT (Judge Wisdom):

When was that? What years?

MR. SANDERS:

1947 to 1958. 1947 is when we had this landmark decision on uniformity of rates. The number in the south increased twenty-eight per cent, the number in the north increased twelve per cent. In absolute figures, the north in 1958 had almost ten million persons employed, five times as many as the south. The value of manufactures for the nation doubled between 1947 and 1958. It increased about sixty-seven per cent in the north, and slightly more than doubled in the south. With all of the progress that the south has made, since World War II, the north is still making tremendous progress and cannot begin to justify the conclusion that the north suffers from any inherent disadvantage as compared to the south.

From a practical standpoint, our rate of progress is the inevitable result of the elimination of these unlawful

[58]

trade barriers that previously benefited the north. We are still behind and in this situation it seems to us basically unfair to force the south to subsidize the north at least without first determining whether the north can bear its own burden.

Many cases have been cited and I would just like—I just have a couple of more points that I want to cover—but many cases have been cited in our brief to show that the principle of primary local responsibility has always been the guiding light of the Commission in division matters. If the Commission had faced up to the economic issues which we contend it did not, and had stated its policy conclusions, we could then argue what those policy conclusions were and whether or not they were within their lawful discretion, or—and this is important to our part of the country, we could go to Congress, we could go into the United States

Congress and have this policy of the Commission reviewed. But in the present situation that we have, if the Court please, our issues have been brushed aside without any reasonable explanation, without any statement of policy; and we have no remedy at all except to come and appeal to this Court.

Our exception number four, which specifically raised the issue, was simply ignored by the Commission, and we believe that this was clearly an error of law; that the Commission violated the Administrative Procedures Act when it

[59]

ducked the issues placed before it. The administrative Procedures Act requires that Federal Agencies rule upon all material issues presented by the parties, and give a reasoned explanation of its conclusions on each issue of fact, on each issue of law, and on each issue of discretion.

We do not ask that this Court decide these questions on its merits; but we do ask this Court to remand this case to the Commission with directions that the Commission decide these issues on their merits.

If this is done, as it has already been pointed out, we have every confidence that when it is required to focus on these issues, the Commission will act in accordance with the economic policy of uniformity, upheld by the Supreme Court in New York versus United States, and we also want to make it clear that the Southern Governors and the Southeastern Association of Railroads and Utilities Commissioners have some other questions. We are not going to get into the cost claims advanced here by the northern railroads; we are not prepared for that. We have left this to the railroads to make a very thorough study of the cost issues, but we think, if the Court pleases, that even such—

just looking at those claims on their surfaces, that they sometimes seem to us to violate common sense.

For example, I want to cover this commuter service. By including the suburban commuter service deficits in the

[60]

costs which produce an inflation for the northern roads, the southern economy which is the ultimate source of the revenues of the southern railroads, is being required to subsidize suburban passenger service in northern cities. And as you know, southern railroads predominately operate a railroad; they are not some of the wealthier western railroads where they have land with oil on it and other things to bring in income, our southern railroads get their income out of our southern people, out of our southern shippers. And so we say in this case, when you set up this inflation that they have set up here, that you take it right out of the south, you take it right out of our people, you take it right out of our shippers.

Nothing in this Commission's report justifies any such results; and this result is contrary to the previously announced policy of the Commission, that—and this is their policy—that suburban passenger service should be supported by State and local authority. And if you will refer to the Southern Governors brief on page 48, we set out the policy of the Interstate Commerce Commission.

Many northern governors have recognized this principle in recent years. Connecticut, Rhode Island, Massachusetts, advised the Commission, and I have here an excerpt from the proceedings in the Penn-Central Merger case, in which all three states came in and appeared and advised the Commission

[61]

what they were going to do about these commuter services;

how they were going to take over the operation of this passenger service, and I can refer that to the Court.

The State of New York, as the Court is probably well aware of, has already purchased the Long Island Railroad; and Governor Rockefeller of New York and Governor Dempsey of Connecticut recently announced and I have a copy of their press release here, which I will not read, but they have recently announced a plan to purchase the commuter lines of the New Haven Railroad. New York has already purchased the Long Island, and Connecticut and New York now have set plans to purchase the New Haven Railroad.

Governor Hughes of New Jersey has actually in his State, and I have a copy of his transportation message to the General Assembly of New Jersey, in which Governor Hughes sets forth the policy of his State, that is to assume the burden of commuter service in the State of New Jersey.

Now, with all of these activities on the part of the northern governors—

THE COURT (Judge Wisdom):

Is that in the record?

MR. SANDERS:

Yes, sir. If it's not, I can furnish the Court with it and I will be delighted to.

THE COURT (Judge Wisdom):

[62]

The Court would like to have it.

MR. SANDERS:

With all of this activity by northern governors in relieving the northern railroads of the suburban service deficits, all of this being in line with the Commission's

policy against the imposing of such deficits on freight shippers, the Commission's action in this case is not only unexplained, but we respectfully contend that it defies explanation.

So in conclusion, I respectfully submit to the Court, that this part of the order of the Interstate Commerce Commission prescribing inflation in the northern railroads division, should be remanded back to the Commission with directions to the Commission to fully investigate and to decide the economic issues raised by the Southern Governors and Southeastern Association of Railroad Commissioners and they should render a specific decision thereon as required by law. This we contend they have not done, and we respectfully submit they should do it, and we feel like as I said in the beginning, that this case is of paramount importance, that the very life blood of the south is hanging on it, and if you abandon this principle of uniformity, then we have nothing at all to hang on to.

THE COURT (Judge Hunter):

You say you would like to have a remand for the purposes

[63]

just stated, but it seems to me this Court will have to face up to some general affirmative statements that were made. For instance the Commission said, other factors being equal, cost differences are the product of and reflect inherent advantages and disadvantages that go to make up the respective overall transportation conditions in the two territories. It seems to me the Court will have to pass on whether or not that is a correct conclusion.

MR. SANDERS:

If your Honor pleases, we contend that looking at this case from any angle that there is certainly no inherent ter-

ritorial disadvantage in the north over the south. And the differences they are bringing up in this case they brought up before the Interstate Commerce Commission based entirely on the fact that they are paying higher wages; they are paying higher taxes, and they still have many more millions of people that are employed than we have; they have more industry; they have everything. They are not operating their railroads as effectively and as efficiently as we are in the south, but what they want to do is they want to take this money, this unjust division here, they want to take it out of the hide of the southern shippers and southern people, and we don't think that this is the proper conclusion, and we think that in any fashion that the Court faces up to this issue, we think that this is a perfect case of the north

[64]

again trying to re-establish the age-old policy of colonial empires that Thurmond Arnold pointed out twenty-six years ago, when he said they were simply using us for the purpose of producing the raw materials so they in turn could manufacture and receive the dividends. This is the position of the Southern Governors and Southeastern Railroad Commissioners, and we respectfully urge its consideration; and I want to thank the Court personally for allowing me to intervene and to make this argument this morning, and I will be delighted to furnish the Court with Governor Hughes' document and any other documents.

THE COURT (Judge Wisdom):

We would like very much to have that.

The court will be at recess for five minutes.

(RECESS.)

MR. CERRA:

If it please the Court, my name is Arthur J. Cerra, and I am Assistant General Counsel for the Interstate Com-

merce Commission, appearing here in defense of the Commission's order, on behalf of the Commission and the statutory defendant the United States of America.

Now, this attack upon the Commission's order to set aside the prescription of divisions that the Commission made on all joint freight rates between the north and south. The issues are many, and in order to avoid any duplication, sub-

[65]

ject to permission of the Court, counsel for the Government and counsel for the intervening defendants have split the issues and will split the time allowed. But I want to emphasize one thing that the Commission is vitally interested in the outcome of the case because it touches upon matters which relate to the Commission's ability to effectively administer Section 15 (6) of the Act.

Mr. Kaier, for the intervening defendant railroads, in our split of issues, has taken the one concerning the passenger deficits, and if it please the Court now I would like to relinquish the floor to Mr. Kaier to permit him to proceed.

If it would be of any advantage to the Court, I have some additional printed copies of the Commission's initial report and supplemental report. They are in the pleadings and they are in the "telephone books," but if it will be of any help, we would be glad to pass them up.

THE COURT (Judge Wisdom):

You might as well.

MR. CERRA:

How many would you want? We have six your Honor.

THE COURT (Judge Wisdom):

Three will be enough.

[66]

MR. KAIER:

May it please the Court, my name is Edward Kaier and I have had the honor of appearing before the Court in the application for an interlocutory injuction.

I appear, of course, on behalf of the intervening defendant railroads, the northern lines, and I greatly appreciate the privilege of appearing and arguing before your Honors this morning.

I shall not burden the Court with a long recitation of the history of the case, but there are certain things about the history that I would like to bring to your Honors' attention.

In consequence of the petition which the northern lines filed, about seventeen years ago, seeking recognition of what they regarded as higher costs of service, the Commission instituted an investigation out of which the order here under review has come. There was, of course, an initial earlier decision by the Commission and that was the one in 1953. In that decision the Commission recognized that, on the basis of the cost evidence which the northern lines had adduced, the northern lines were entitled to differentially higher divisions than the southern lines, but the Commission said that it would not accept those costs at face value because it regarded some of the items, particu-

[67]

larly maintenance of structures and maintenance of equipment as being rather transient in nature, extraordinary expenditures in those years. So it said that it regarded and thought for the future the cost of neither group should be lower than the other and that it therefore prescribed equal divisions, mile for mile.

Then we petitioned for reopening of the case and said that in the intervening years we have confirmed that our

costs are higher, and as you know exceptions were taken and there was a long proceeding before the Commission; and the examiners recommended incidentally a higher basis of divisions for the northern lines that the Commission ultimately prescribed.

We had an oral argument before the entire Commission and the Commission prescribed the scale which your Honors are now familiar with, and in which we were given higher divisions because our costs were higher. And as we have stipulated—the parties have stipulated, in the stipulation embodied in the pre-trial order, the southern lines division on this traffic was reduced approximately three per cent.

Now, your Honors, ten of the eleven Commissioners concurred and the one Commissioner who dissented agreed in part, Commissioner Murphy, and even he considered that we should have higher divisions but he would not

[68]

have gone as high as the majority.

Now, I submit, your Honors, that a review of the report will show that the matter was considered with great thoroughness, and I would like to call attention to the fact that this was not a one-way street. The southern lines won very important issues in this case. It was very hard-fought and if we had won, it would have added very considerably to the amount of money that would have been returned to the northern lines. That was true as to our request for additional revenue, because of our—I mean additional divisions because of our urgent revenue need.

In the past, your Honors, in fixing divisions between northern and southern lines, the Commission has relied heavily on the greater revenue need of the southern lines. The Supreme Court said that in that B & O versus United States case. Your Honors, the factors fixed by the Commis-

sion for the southern lines in the past cases gave the southern lines factors that were twenty-five per cent higher than our factors on general traffic and as high as eighty-five per cent on citrus fruit from Florida which is one of the heaviest moving commodities from the south to the north. There isn't anything new about one group having higher divisions than another.

[69]

Back in those days, the Commission couldn't—they didn't have the sophisticated cost evidence such as they do now and they did the best they could with the evidence that they had, and revenue need was one of the important items of evidence in those past cases. And it was back in 1953 that the Commission departed from the inflation for the south and said, "Now, we have cost evidence and we are going to impose equality because the costs are equal." Here in this case they found that costs are no longer equal; and the costs were higher on the northern lines than the southern, so they reflected that in a modest way in the divisions.

THE COURT (Judge West):

Of course, counsel for the southern railroads indicates the higher costs are not properly allocated.

MR. KAIER:

Yes, he does that, your Honor, and I propose to go into that before I am through.

THE COURT (Judge Wisdom):

Before you do, tell me what factors enter into revenue needs? Does servicing of any bonds, for example?

MR. KAIER:

No, I don't think so, your Honor. I think that the principal thing is the need to have money to operate

[70]

the railroads so that there will be public transportation.

THE COURT (Judge Wisdom):

Well, that would be broad enough to include the factor that I mentioned?

MR. KAIER:

Yes, rate of return would be a very important factor.

THE COURT (Judge Wisdom):

If you have, let us say, more interest to pay out than the southern lines there would be a greater revenue need.

MR. KAIER:

It would be in a sense, your Honor, but ordinarily the Commission doesn't pay much attention to that because they take a rate of return on property value which does not include the paying of interest. I mean it comes before interest and then the railroads would have to pay the interest out of that rate of return.

But, of course, the Commission simply dismissed the revenue need here and said, "No, we are not going to give either group of lines anything for their alleged greater revenue need.

Now, I would like to call attention to just one small passage from the Commission's report where, in

[71]

concluding its discussion of the evidence, it says ". . . we are of the opinion and find that it (the cost evidence) affords a reasonable basis for the exercise of practical judgment. Stated in another manner, everything else being substantially equal, the relative costs of the parties reflecting their respective operations as to this traffic can properly serve here as a guide for the determination of just,

reasonable and equitable divisions." And then they said Cf Louisville and N. R. Co. versus Southern Railway Co., 319 ICC 639.

Now, your Honors, it was the Southern lines who at page 189 of their exceptions said there is nothing difficult or complex about the process of constructing divisional scales once the cost evidence has been analyzed and appraised; indeed the construction of divisional scales from the cost evidence proposed by the southern lines in this case is precisely the method adopted by division 2 in Louisville and Nashville R. Co., versus Southern Railway Company, 319 ICC.

Now, you might say, "Yes, but they were dealing there with the use of cost in the construction of scales and didn't agree on what the costs would be," but they had that in mind, too, and on page 188 of their exception, they said to the extent if at all the examiners are found to be correct in their rejection of specific

[72]

aspects of southern lines' cost evidence, see exceptions 1 and 2 supra, the cost evidence as thus modified would provide the basis for constructing the divisional scales.

Well, the Commission constructed these scales in precisely the way the Southern lines suggested and followed exactly the case the southern lines cited, the Louisville and Nashville case. That case is very instructive, I think in this case, your Honors. In that case the Commission reached its conclusion just—Well, let me say first, that in that case it was a dispute between the Southern Railway System lines and the L & N about divisions over rates on coal from a limited area to a limited number of destinations, and would apply only on the one commodity. There as here, the Commission based the divisions on relative costs. The Southern

Railway then sued to set the Commission's order aside in the District Court in North Carolina, claiming that the Commission's cost determinations were improper, not supported by substantial evidence nor did they make the necessary findings.

The Court summarily disposed of these contentions in a per curiam opinion. It did not review the individual cost items, empty returns, car costs, and whatever else was in dispute, it said that the Commission

[73]

had considered all of the factors set forth in the statute and that there, as here, they were equal as between the parties with the exception of costs. The Court said that the facts were supported by the findings and were supported by substantial evidence; that it had no power to substitute its fact appraisal for that of the Commission and stated that with much ingenuity counsel for Southern had attempted to find questions of law where there are none.

Now, that decision is Carolina and Northwestern Railway Company versus United States, 234 F. Supp. 112. It was affirmed by the Supreme Court on motion.

The theory of that decision of the North Carolina case which is so similar to the case here at issue, is embodied in the rules of judicial review stated in Illinois Commerce Commission versus United States, 292 U.S. at page—

THE COURT (Judge Wisdom):

You needn't give the citation unless the case is not in your brief.

MR. KAIER:

Thank you, Your Honor, it is in our brief.

I would like to take the liberty of reading just three sentences from that opinion, your Honors, because I regard them as very pertinent here.

[74]

THE COURT (Judge Wisdom):

Where is it? Is it in your brief?

MR. KAIER:

It is, sir.

THE COURT (Judge Wisdom):

What page?

MR. KAIER:

I will find it. May I read it?

THE COURT (Judge Wisdom):

Yes, go right ahead.

MR. KAIER:

Whether or not the cost study was representative, if it please the Court, whether the study should have been more refined and whether it should have been supplemented as appellants desire, are questions of fact, the determination of which is within the competence of the Commission. The Commission reached its conclusion after full hearing and thorough consideration of all questions presented. As the record affords a sufficient basis for the Commission's determination, it is not subject to judicial review.

Now, while dressed up in language about burden of proof, substantial evidence and necessary findings, when you get right down to the substance of it, I submit that the plaintiffs' case here rests upon the contention that the cost studies were not representative of the traffic involved

[75]

and that it should have been more refined; precisely the questions the Supreme Court said in that Illinois Commerce Commission case they refused to review.

We have established in our brief, I respectfully submit, that the Commission's decision is supported by adequate findings. I am not going to go into a discussion of each one of those cost adjustments.

THE COURT (Judge Wisdom):

I assume that you are going to address yourself to some of the remarks the court made.

MR. KAIER:

Yes, I will indeed. But at this moment, unless you would prefer, your Honor—

THE COURT (Judge Wisdom):

I don't want to interrupt the sequence of your argument if you feel it is better to continue along the line you were going to concern yourself with.

MR. KAIER:

I would like to argue before reaching the suburban deficits—I am most anxious to reach it—but I think for the purpose of continuity I would like to continue on this cost aspect.

We were the moving party in securing the reopening of the investigation. We offered evidence as to the relative costs of service based upon Form A Territorial

[76]

Average for the north as against the costs of the south. Then the southern lines came along and they produced the same territorial evidence with some adjustments. Now, at the conclusion of the presentation of our direct evidence,

the southern lines obviously believed that we had made out a prima facie case, and didn't rest on the proposition that we hadn't carried the burden of proof; they submitted voluminous evidence before the Commission and traffic studies. All of this evidence is in the record and all of it was available to the Commission and for consideration by the Commission.

The Southern lines of course say that in permitting us to rely exclusively on territorial average costs developed by this Form A that the Commission didn't enforce the burden of proof on us. Now, your Honors,—

THE COURT (Judge Wisdom):

Doesn't the Commission's approach to this case put a premium on the current condition, for example, doesn't it demand that these facts be brought up to date, the facts on which it rests its decision are prior to 1958 and the essential or a certain part of the essence of the Commission's case is the difference in the current fact situation between north and south; and then extending that or going one step further if they are going

[77]

to depart from uniformity would not the railroads constantly be asking to reopen the case because of cost differential? It's a long question, maybe two or three.

MR. KAIER:

Well, if your Honor please, on the first point as to whether the costs were incurred before 1958, yes, they are 1956 costs; but your Honor, this investigation has been in litigation continuously since then. And suppose we were to go back to the Commission to put in costs of, say, 1965, by the time we reach you again all that time would have transpired. The northern lines—both the northern and southern

lines are most anxious to have the case handled expeditiously and we have pressed at every stage for expeditious handling, because we thought we were going to get some money out of it and we want to get the money. But our southern friends insisted that they should have adequate time and the Commission agreed with them and they had their adequate time and so we are now that far behind in the costs; but if they think the costs have changed, they could go back to the Commission with a petition and show that and get an adjustment of the divisions.

Now, of course, you have said maybe we will be

[78]

back again; if your Honor please, if there was a substantial change either way, they'd be back or we'd be back and the Commission would have to look at it; but I suppose that is in the nature of things, they have to decide these things on the facts.

THE COURT (Judge Hunter):

In my judgment, when you depart from equal divisions, you should do so by stating precisely the basis for that departure. Where in the judgment of the Commission do you find precise language as a basis for the departure?

MR. KAIER:

Well, I think, your Honor, the precise language for the reason for the departure is the costs now require that the northern lines have greater money.

THE COURT (Judge Hunter):

And that is based on Rail Form A for 1956?

MR. KAIER:

Rail Form A for 1956 as adjusted by the Commission for certain four or five adjustments proposed by the southern lines and which were adopted by the Commission.

THE COURT (Judge Wisdom):

My question as to the passenger deficits really goes deeper—I hope it does—the question of passenger

[79]

deficits.

MR. KAIER:

It may be that they are substantial.

THE COURT (Judge Wisdom):

That is one reason I asked you about the interest payments. It may be that there are inherent differences in costs between the north and the south; now, does that alone justify higher divisions for the north? Aren't you in effect making the south pay for these higher divisions?

MR. KAIER:

No, your Honor, I don't think so. Of course, the south isn't paying, they don't pay the divisions.

THE COURT (Judge Wisdom):

Well, they ultimately bear the burden, the southern lines. It's the same as saying the consumer doesn't pay the tax.

MR. KAIER:

Let's assume that's true, they would only be paying for that part—paying higher rates, in effect, for that part of the transportation service that had the higher costs. Let's assume—

THE COURT (Judge Wisdom):

But why should one area of the country be burdened with this burden, if it is in the national interests,

[80]

and I assume that it is, it's the burden of the nation.

MR. KAIER:

Your Honor—

THE COURT (Judge Wisdom):

And therefore it may well be that this discriminatory clause in the act may be applicable here.

MR. KAIER:

If your Honor please, one section of the country would not be bearing it. The northern shippers would be bearing it when they use the service. Let's suppose a shipment from Chicago to New York.

THE COURT (Judge Wisdom):

I agree with that. It falls principally on the southern shippers to make up that difference.

MR. KAIER:

Oh, no, no. Now, I'm not speaking at the moment of the southern deficits, just the general higher costs in the north. Let's suppose, your Honor, we didn't have any joint rates, the Southern Railway would set its own rate from Atlanta up to Washington and then we had our rates from Washington to New York, a combination of local rates, when the southern shippers shipped up there, they would pay our local rates which would reflect the higher costs; so why shouldn't the same

[81]

thing be true if you have joint rates? They are paying no more than for the service they get, and the cost of rendering that service is affected by these higher costs.

THE COURT (Judge Hunter):

But, of course, the southern railroads are and that, of course, might affect the intrastate rates in the southern states. That is true, isn't it?

MR. KAIER:

It is conceivable. Obviously I would have to answer that it is conceivable, but I don't think that is applicable.

THE COURT (Judge West):

Mr. Kaier, it seems to me that the argument of the southern railroads is directed primarily to the fact that there were items in the costs added into the calculations which had a bearing on the traffic shared between the north and south. Judge Hunter asked you a while ago where was the precise language in the Commission's report to indicate that they gave reasons to deviate from uniform divisions, and in the quotation that was read a while ago, wherein they stated that everything else being substantially equal the relative costs of the parties reflecting their respective operations as to this traffic can properly serve here

[82]

as a guide for the determination of just, reasonable, and equitable divisions. Now, as I understand it they are complaining about the fact that you had this traffic, the switching and handling charges at the interchange points which has nothing to do with this traffic, and various other elements such as wages and taxes that have nothing to do with this traffic. I understand that is their argument.

MR. KAIER:

Yes, sir and I can answer that question.

THE COURT (Judge West):

I would like to hear it.

MR. KAIER:

I am just about at that point, your Honor, at which I would like to demonstrate to your Honors, that first the use of territorial average was the reasonable thing and that we made a prima facie case, and then I would like to answer several contentions made by Mr. Trienens about the individual items.

THE COURT (Judge Wisdom):

I don't think that anyone necessarily questions the use of a territorial average; that might be similar to an area price used by the FTC, but the question is whether these particular items should be included among the items used for determining the average.

[83]

MR. KAIER:

Of course, I intend to meet each of these.

THE COURT (Judge Wisdom):

We understand that.

MR. KAIER:

But at this point I would like to say that we have a case here of tremendous scope; we have all rates with a very few exceptions between the north and south and every station, every station in the south, and on all commodities except coal, coke and few others by stipulation, and over all railroads. Now, the mere statement of that, it seems to me, suggests that it would be appropriate to use average costs, and the Commission has held that the Form A Territorial Averages are appropriate in situations where you are considering rates on large amounts of traffic. They have said that in the Class Rate Case that was mentioned with some prominence this morning; and the Supreme Court recog-

nized that that case involved only aspects, and that the class rates were a very small percentage of the traffic, much smaller percentage of the total than we have here. The southern lines' evidence in this very case, your Honor, my second point—the southern lines' evidence in this case is Form A Territorial Averages; all of the costs in their presentation are Form A costs as they selected to adjust them; wages of trains, wages of agents, wages of track labor,

[84]

cost of buying locomotives; every one of the costs in here that are very vital to their costs, are precisely the same costs as ours, the Form A Territorial Averages. In fact the Commission said that the costs that they used were the costs of the southern lines except for a few of the adjustments which were very few. This is at page 25 of their report. And the evidence used by the Commission in fixing the divisions that were superseded by this order was also based upon territorial average costs, Form A.

Now, your Honors, as a matter of fact, there is no such thing as precise costs incurred on special, specific and particular traffic. Any shipments or category of shipments are handled in the terminals in common with all other freight that goes in there; handled by the same switching crews, same trains, over tracks maintained for all traffic, and of necessity, therefore, any shipment's cost is a proportion of the expenses incurred in providing the operation and the railroad over which it is conducted.

Now this Form A classifies the expenses in various categories, and then it reduces those expenses to a unit cost; some of them are cost per car; some other categories are cost per car-mile; some other categories are cost per ton; and you get the railroad cost of pro-

[85]

viding these units of serivce, and then you apply that to the traffic in question by making a traffic study to find out how many units of service a particular traffic incurred. We put in a traffic study and so did the southern lines, and the Commission relied on theirs and then took these various units of service that were used by this north-south traffic and it priced them out by unit cost from Form A averages.

So it seems to me that there was, therefore, very logical basis for the use of the territorial averages when you are dealing with movements from the whole territory to the whole territory over all railroads.

THE COURT (Judge Wisdom):

That assumes a close relationship or a proper relationship with the north-south freight.

MR. KAIER:

Yes, sir.

THE COURT (Judge Wisdom):

Let's assume a passenger train using its own rails and own terminals, is that, too, included in the averages, in the cost of operation?

MR. KAIER:

Your Honors, after the Commission determines the cost method, they call that an out-of-pocket cost, they then add overhead, overhead expenses, and return

[86]

on investment, and a few other things, including passenger deficits, and as a part of the passenger deficit,—part of the passenger deficit is allocated in that fashion.

THE COURT (Judge Wisdom):

It seems to me there is no good reason for including such items. Now, plaintiffs may have an entirely different thing, and they concede with respect to common facilities.

MR. KAIER:

I think I had better get to suburban traffic.

Your Honor,—

THE COURT (Judge Wisdom):

I am assuming not just suburban deficits, but any costs that can be considered arising from an inherent difference between the two areas.

MR. KAIER:

Any cost that could be—

THE COURT (Judge Wisdom):

—that had just no connection to north-south traffic.

MR. KAIER:

It would be proper to take it out and the Commission took some out, and adopted several, I don't know, three or four of the adjustments proposed by the southern lines. The reasons they explained in detail in Appendix

[87]

B to the report. For example switching; we used the territorial average switching cost as developed by the Commission in a seven day cycle; the Southern lines said, "Well, switching costs are very different on the north-south traffic because such movements within the south are affected by a great many multiple car movements and that reduces the switching costs within the south, and, therefore that should come out of the average, and when you apply the remaining part of the average which you will apply to the north-south traffic, it will be higher.

Then they presented a cost study to show that, your Honors, and the movement of north-south traffic was about 967,000 cars, and their study of the cost of switching within the south embraced forty-one cars which they asked the Commission to believe was representative of the whole movement on almost a million cars. But the Commission, of course, said that study is defective both as to the sample and as to the manner in which it was made. So they refused to make that adjustment, and they said that in a case like this involving traffic to and from all terminals in both north and south, there Form A average cost was particularly appropriate and they disposed of other contentions in the same way.

This gateway interchange that you have been hearing

[88]

about, interchange at the gateway, we submitted the average cost per unit of the northern lines and the southern lines; the southern lines came along and said "Well, now, at some of these gateways, like Cincinnati, there is an equalization of engine time, six months of the year the northern railroads do the work and six months the southern railroads." The Commission pointed out that equalization of engine time doesn't mean equalization of cost. We still have higher wages, and they pointed out also, that a great deal of the interchange takes place on the tracks of a carrier itself that is doing the work, back in the yards, and so forth to make the interchange, and that was not being accounted for in the adjustment made by the southern lines. And then also, if the southern lines were to reduce the average as it applied at an interchange like Cincinnati, then they should increase the average as it applied at other points in the north and reduce it as it applied to other

points in the south; but they didn't do that. So the Commission said that their gateway interchange formula would not be acceptable. All on very reasonable bases.

We have the same thing about empty return ratio. The Commission analyzed that argument very carefully. Mr. Trienens told you this morning about the automobile

[89]

part cars moving between points in the north; but they move between the north and south, too; they move down to Louisville; they move in great abundance down to Atlanta, but they want to cull those out and not pay any attention to them. The Commission would not permit them to do that. As a matter of fact, your Honors, the empty return ratio adjustment proposed by the southern lines was proposed in three steps; it didn't relate just to these automobile part cars. That was the first step which the Commission found to be based upon assumption and conjecture; and the second step was the southern lines said, "Well, there was an imbalance between the northern lines and the Canadian railways;" the Commission said there wasn't any such imbalance; and the third step was what the Commission said was purely an assumption, and they dismissed these adjustments about empty return ration, all for very rational reasons.

Now, if your Honors please, I am coming to the suburban deficits, and I should like to observe at the outset that although in this case the subject has been given great prominence, it was not so much as mentioned by the southern lines in the oral argument before the Commission. I have had that transcript combed and there was not one word about suburban service deficits from Mr. Trienens in the oral argument before the ICC.

[90]

THE COURT (Judge Hunter):

I don't find that they are relying so much upon it this morning.

MR. KAIER:

That's right, the Governor did.

The Governors incidentally, I will say, your Honors, had two or three sentences about it in the argument there on behalf of—

THE COURT (Judge Hunter):

Tell us what suburban costs, what costs of suburban passenger traffic were taken into consideration in this case as they show in the record?

MR. KAIER:

You mean the amount of it, your Honor?

THE COURT (Judge Hunter):

No, I don't think you can find the amount, but what type of costs? WHat do they mean by common costs?

MR. KAIER:

Well, of course, common costs would be those costs which are common as between one service and another, freight and passenger.

THE COURT (Judge Hunter):

That is the way I interpreted it. It doesn't mean common to the north and south; it doesn't mean that.

MR. KAIER:

[91]

No, it doesn't mean that.

Now, I would like to start at the beginning of suburban service thing, because obviously it is a matter of great importance.

By reason of the fact that railroad passenger service is not self supporting, the railroads are obliged to look to their revenues from freight service to help overcome their deficits from passenger operations, and that is the reason the Commission takes them into consideration, the passenger deficits, in fixing freight rates. The lawfulness of their doing so is specifically affirmed in the case of King versus the United States.

THE COURT (Judge Wisdom):

Is that case distinguishable on the ground that the opinion is based on the faciliteis being used in common?

MR. KAIER:

No, sir, that decision was not based on that at all. That decision resulted from proceeding in which the Commission was asked to increase rates within the south, freight rates within the south, on the ground that they discriminated against interstate commerce. The Supreme Court adverted to the fact that the Commission had said that where passenger services cannot bear their direct cost and share of joint costs, it is compelled to take the passenger deficits into account in an

[92]

adjustment of freight rates, and that both freight and passenger service are essential and the deficit of one must be compensated by earnings from the other if the carrier is to continue operations. That is the basis for the Commission taking passenger deficits into account in fixing freight rates, not this idea that there are some costs in common; it's the necessity of having revenue to continue the opera-

tions which they are obliged by law to perform and provide. The Supreme Court quoted from the Commission's decision exactly, if not verbatim, just what I have told you, and that was the basis. The Supreme Court said, we conclude there is no reason why the Commission may not give weight to passenger deficits in prescribing the intrastate freight rates in Florida as it has done in prescribing the intrastate rates in other territories. And there was no effort at all on the part of the Court or the Commission to find out what expenses were common to freight or independent of freight, nonewhatever in this case.

Now, the Form A Formula provides that a proportionate share of the passenger deficits should be assigned to the freight service of a given traffic movement, and the passenger deficit that is thus allocated under the formula is the entire passenger deficit. It's a deficit that results from the operation of a train between

[93]

Atlanta, Georgia, and Savannah, or between Birmingham and New Orleans, or any other place in the south or any other place in the north. There is no dispute about that.

THE COURT (Judge Wisdom):

Before you leave that, will you back up a moment.

Suppose it was proven that the difference in costs was due to inefficiency of the railroad, would you say then that those costs would still be properly considered?

MR. KAIER:

No, sir, I would not. The railroad would have to suffer for its inefficiency; it could not be compensated for those costs.

THE COURT (Judge Wisdom):

Still it would have that need for more revenue; and you would have to look to the freight revenues to make up that difference.

MR. KAIER:

The Commission woulnd't give it to them. If there was inefficiency, they would have to remove the inefficiency and get their revenues up by removing the inefficiency.

But here, your Honor, this passenger service, you have to get authority from the public body to take the train off. We are obliged by law to continue service.

THE COURT (Judge Wisdom):

[94]

I realize that, and yet you still have a statutory provision prohibiting discrimination against any region. Now, I assume that your answer would be that it is not unreasonable.

MR. KAIER:

Well, that would be one thing, your Honor, but I would say that in the first place there isn't any discrimination between any regions.

Let me say that the passenger deficits of the southern railroads is relatively greater than the passenger deficits in northern railroads. And we said to the Commission forget about passenger deficits, predicate this decision just on freight costs and don't allocate any part of the passenger deficits and you will give us higher divisions than if you include them.

THE COURT (Judge Hunter):

How could you do that in face of the King case?

MR. KAIER:

Well, if the southern lines agreed to that it could be done; but they didn't agree to it. They said, "Oh, no, we want you to include the passenger deficits, but only that which is meaningful to us."

THE COURT (Judge West):

It was not necessarily meaningful for them only, if it was a passenger deficit that had something that would be

[95]

common with freight service. But they are complaining about something that is unknown down here.

MR. KAIER:

Your Honor, that was the excuse, but there wasn't any evidence put in the record to show what part of their overall passenger deficit resulted from common costs and what resulted from direct costs. We put some evidence in to show that they have a deficit even from—before you get to common costs.

THE COURT (Judge Hunter):

The South, I think—at least one of the reasons they say is the natural disadvantage must be found in the north before you can have an increase in divisions for the north, and then the Commission goes ahead and says the fact that costs are more proves there are inherent natural disadvantages. Do you think the Commission based that decision on that holding?

MR. KAIER:

No, I don't think so, not at all, your Honor. I don't think they based it to any extent. To start out, I don't think there is any legal requirement whatever that costs can be given recognition only if they result from an inherent

advantage or disadvantage. The idea to me is shocking to hear it argued here before you today that the Commission couldn't give consideration to higher

[96]

wages. In fact we are told that higher wages are an advantage to us because they mean that we are more industrialized. There is no requirement in law that before the Commission can take into consideration our higher costs that they must find that they result from—

THE COURT (Judge Wisdom):

The question of whether the Commission should give consideration to higher wages—there is no question about your being sound there, but should it do it by making up the difference on these divisions or should they do it by having you increase your rates, intrastate for instance?

MR. KAIER:

Your Honor, to the extent that the higher costs are incurred in providing this service, to that extent they should pay for it.

THE COURT (Judge Wisdom):

That gets you back to their argument of common facilities, and their relationship to the north-south freight. But if there is no relationship to the north-south freight movement, then, of course, your argument falls.

MR. KAIER:

Your Honor, I answered that when Judge Hunter asked me and I come back to it now with this, it goes to that ex-

[97]

pression of the Commission which was made in answer to the argument put up by the Southern Governors group;

they said that there has to be a finding that the difference in costs relates to an inherent disadvantage. The Commission simply observed that as a matter of fact the costs reflect the totality of the operation in either territory, and the Supreme Court said that very same thing in almost the same words in that case where they reviewed the Class Rate decision, New York versus United States.

THE COURT (Judge Hunter):

From what Judge Wisdom and Judge West said, the south in 1958, didn't have suburban commuter traffic that you gentlemen have in the north and that, therefore, could not have been considered in this case.

MR. KAIER:

Your Honor, we didn't have some of the local passenger train deficits that are incurred in the south and yet that is included. Our friends didn't try to find out what part of their passenger deficits resulted solely from the operation of passenger trains and what part would remain.

THE COURT (Judge Hunter):

Perhaps you are arguing now that the Commission didn't do the job right.

[98]

MR. KAIER:

No, I don't think so. I think that I am arguing that—

THE COURT (Judge Wisdom):

These are elements that should have been considered.

MR. KAIER:

It's a false standard, your Honor, this business of justifying the inclusion of some passenger deficits on the theory that the cost would remain even if the passenger

service were discontinued; it's a false standard. That is not the reason the Commission included passenger deficits. The Commission includes passenger deficits because it is necessary to have them to continue operation of the railroads, north and south.

THE COURT (Judge Wisdom):

I think we all understand that is the reason for it.

MR. KAIER:

I say that if they want—the southern lines didn't claim that that was the reason; they claim that the reason for including it was that there were common costs and that the conditions, if the passenger service were discontinued, the costs would remain. That was not at all proved.

And in the passenger train deficit investigation which was cited to your Honors this morning, the Commission said that that was extremely doubtful, and that

[99]

there was evidence to the contrary, very strong evidence to the contrary.

THE COURT (Judge Wisdom):

Now you have had an hour; we took a good deal of your time. We will give you some time to finish your argument.

THE COURT (Judge West):

Just one question on that: Would you agree that if the evidence had shown that some of these passenger deficits costs were attributable to services having no connection at all with this north-south traffic, that to that extent the deficits shouldn't be included, or is it your position that they should be included regardless of whether it had any connection or not?

MR. KAIER:

It is the latter, your Honor, for the reason that this is an allocation of something in the nature of overhead. Just as the southern lines passenger deficits were greater than ours, that was allocated without showing any connection.

THE COURT (Judge West):

I understand that, but I say would you have any objection to saying that if the evidence showed that the southern passenger deficits were deficits on a service having common costs, passenger and freight, they should

[100]

be included in figuring the costs, and that your only contention is that should it be shown that it is not a common cost, it should not be included in the overall costs of north-south traffic?

MR. KAIER:

I can not state that, your Honor, because there has been a definite theory upon which the Commission has allocated these costs as a matter of policy, and that is that there is a need for that revenue to continue operations.

THE COURT (Judge West):

I just wanted to see if I had it right in my mind.

THE COURT (Judge Wisdom):

Let me ask you this: The Commission does, of course, distinguish between costs of passenger service and cost of freight service, does it not?

MR. KAIER:

Yes, sir.

THE COURT (Judge Wisdom):

And makes separate studies and analyses and determines the proper rates. But what I am getting at is here it is for the services rendered by the railroads in connection with movement of freight; that seems to me is what their duty is, and are confusing the two—and I am not taking issue, because they recognize and every-

[101]

body recognizes that deficits have to be made up somewhere; have to be made up from total revenues, but they are confusing the two, and it seems to me improperly perhaps, in charging the passenger service to the freight service.

MR. KAIER:

I'm sorry; I don't understand that, your Honor. How do you mean "confusing it?"

THE COURT (Judge Wisdom):

That they have improperly—never mind confusing—they are not confusing—the Commission keeps the terms straight—I realize that, but the services in connection with the movement of passengers, the cost of such services are being charged to the cost of moving freight.

MR. KAIER:

That's correct.

THE COURT (Judge Wisdom):

Now, there seems to me to be some question whether they should do that.

MR. KAIER:

Didn't King say they could do that, your Honor? That is the very point of the King case. The Supreme Court said

that the Commission had the power to do that. And so they are just doing what they have done in all

[102]

these other cases. Now, along that line, your Honor, bringing it right down to this case, these passenger deficits are now in the rate scales that are being divided. So the question now is a matter of dividing the freight rates and if the deficits are there, should not the lines which incur the deficits get the deficits? Should the southern lines be rewarded and get some part of our passenger deficits which are in the freight rates?

The southern shippers aren't going to pay anything different no matter how you decide the case. They pay rates; it's a matter of making a fair division between the railroads as to what they should pay.

Now, if there is something wrong with the rates, that the rates are not to include passenger deficits, whoever pays them has a remedy, whether it be the northern shippers or southern shippers, eastern or western; they can go to the Commission and file a complaint against the rates and say, they should effect a change in the rates involved; say "you should take the passenger deficits out of the rates and let each service stand or fall on its own revenues."

THE COURT (Judge Hunter):

To what extent—you are talking about passenger deficits versus commuter deficits—to what extent did the Commission consider these deficits? Not in toto?

[103]

MR. KAIER:

No, your Honor. There was an allocation. They get the deficits in toto—the difference between the revenues and costs—and they allocate that to the service in question, in

the relation between, I think it would be the tons and the ton-miles of this service in relation to the total tons and ton-miles.

THE COURT (Judge Hunter):

As compared to the north and the north-south and the south?

MR. KAIER:

No. They would take the relation between the north-south traffic, let's say, on a ton-mile basis; and they say that the north-south traffic is ten per cent of the total ton mileage, and they will allocate ten per cent therefore of the deficit to the north-south traffic.

THE COURT (Judge Hunter):

They include all of the deficits; it matters not whether the passenger and freight situations have something in common?

MR. KAIER:

They still consider it.

THE COURT (Judge Hunter):

Whether they have something in common or not.

[104]

MR. KAIER:

That's right.

THE COURT (Judge Hunter):

But insofar as the suburban-commuter rates, am I to understand that they took only where the expense would have been there anyway, whether or not you had suburban-commuter traffic?

MR. KAIER:

No, suburban deficits simply were—None of these deficits—local passenger, express—were identified; but they took the entire suburban deficits, and entire passenger deficit—including suburban and everything else.

Now, of course, one of the biggest commuter lines in the whole country is the Illinois Central. To say there is no commuter service down south—the Illinois Central has a tremendous commuter service in Chicago; it is one of the biggest in the whole country and it has a passenger deficit; and its passenger deficits are reflected in the freight rates, and in the initial go-around in this case they were reflected in the Southern lines passenger deficit costs that were allocated in this service. Now, somewhere along the line, they tried to make an adjustment in their brief—I don't remember about that—but there is that line that has a great

[105]

big commutation deficit.

Now, we have heard a great deal this morning about the supposed policy the Commission adopted that that rail deficit—that the local authorities should take care of the commutation deficit. Well, now, actually, that was not the adoption of a policy at all. That was one of a series of recommendations. The Commission started out "We recommend" and then went on to say that there should be greater help from local authorities in helping to meet this passenger deficit. The commission can't force them to do that and until it is forthcoming the reason for allocating them to the freight continues, the need of the money.

Now, secondly, your Honors, another recommendation they made there was that there be more freedom on the part of the railroads to take off local passenger services such as you have down here. That was just as much of a

policy as any of these things could be called policies, and yet the southern lines didn't take out their deficits, notwithstanding that same recommendation. So this business about the Commission having a policy, I am sure if you read that case you will find there would not be too much to it.

Now, I would like to say a few words about the intervention of the Southern Governor's group.

[106]

I think I have pretty well covered this matter of this inherent disadvantage, in answer to Judge Hunter. There is no need or requirement for the Commission to find inherent disadvantages, and I know of no rule of law or statute and they have not cited any.

THE COURT (Judge Hunter):

Is there a decision on the subject other than the decision of the Commission?

MR. KAIER:

No, sir. The Commission, I submit that if the Commission finds the costs are higher and finds there is no inefficiency, there is no reason in the world why they cannot then give effect to the higher costs.

The Southern Governors also contend that our higher costs are the result of over capacity. There is no evidence of that, your Honors. There is no more reason in this record to suppose there is over capacity, greater overcapacity in the north than there is in the south. For all the record shows the over capacity may be much greater in the south than in the north.

They talk about merger activity; there are merger activities in the south: the Atlantic Coast Line and Seaboard merging, and Southern and Central of Georgia, and several lines trying to get into this and so forth. That is all highly speculative.

[107-108]

As far as equal rates are concerned, if your Honors please, these southern lines themselves contended that the Commission should fix these rates on the basis of relative costs; they contend their costs were higher and that therefore they should have a higher basis of divisions.

THE COURT (Judge Wisdom):

Did the Commission make a finding as to the over capacity?

MR. KAIER:

They had something to say about that.

THE COURT (Judge Wisdom):

Well, I don't want to take time. I will find it if the Commission said it.

MR. KAIER:

They did. Your Honor, what they said in effect was that the merger action was going on in both north and south; and that there was no evidence of greater over capacity in one than in the other.

On page 17 of the report, it says that whatever savings come from mergers is something that will arise in the future. Last paragraph on page 17.

If your Honors please, there are many things that I want to cover but, of course, some of those things the Court has indicated they have already pretty much dismissed, but I would like to summarize in about two

[109]

minutes.

The object of the proceeding before the Commission was divisions. It is the Commission's discretion to take into consideration what weight is to be given to the various fac-

tors. There is no doubt that they predicated their decision on relative costs. The costs that it used were the costs of the kind usually used in these cases, and the great bulk of the Southern lines cost evidence was the same as ours.

The Commission carefully considered each one of these adjustments that the southern lines proposed and gave very definite and very rational reasons for not adopting those which it did not adopt.

The case is very much the same as Southern Railway or rather South Carolina and Southeastern versus United States, the L & N Southern Railway case.

The Court in that case simply held that the Commission acted with authority, and held that there was substantial evidence and refused to send it back to the Commission.

Here is another very recent case, Illinois Central versus the Great Northern, ICC 34699 is the citation.

It is not yet in the official reports.

THE COURT (Judge Wisdom):

What is the number?

[110]

MR. KAIER:

34699, served October 27, 1966. This is a recommended report of Examiner Birchmore; the case involved a dispute over the divisions on calcined alumina, originating in a few points south on the Illinois Central to a few points on the Great Northern. The Illinois Central put in its Form A costs, system average form A cost adjusted for switching, to eliminate platform handling, which is eliminated in our costs, and to reduce the billing expenses.

The Great Northern criticized the use of the Form A, as not tending to disclose the cost of handling the traffic at issue. The examiner said: It urges that the formula is designed to portray broad territorial costs and when

applied to individual roads, shows only the average costs characteristic of that road, which may be heavily influenced by predominate traffic different from the proceeding under consideratiom.

But the examiner said that costs determined in a similar manner had been relied upon in other division cases involving single commodities, citing L & N versus Southern, 319 ICC 39, that same divisions dispute between the L & N and the Southern Railway.

So here we have a situation where these lines have extended the use of this cost formula to embrace

[111]

single commodities moving between a few points. The Illinois Central did it in this case, I just cited; the L & N did it in the coal case, and yet they come in and say to your Honors that in this broad territorial case that formula is not good.

It seems to me there is a marked inconsistency there.

But all of the evidence comes back to the proposition that the Commission is the one which is charged with the determination of whether or not the costs studies are representative or should it be more refined. We think they have discharged that duty and respectfully submit that the Court should apply that ruling to the issues here and as the North Carolina court did sustain the ruling of the Commission.

MR. CERRA:

If it please the Court, I just have two small points.

The Court has inquired about the power of the Commission to consider in a determination of the prescriptions of division, this business of passenger deficits, suburban deficits. This power stems from the statute itself, your Honors, Section 15 (6) states that in "prescribing and determining the divisions of joint rates, fares, and charges,

the Commission shall give due consideration, among other things, to the efficiency with which the carriers concerned are operated, the

[112]

amount of revenue required to pay their respective operating expenses, taxes, and a fair return on their railway property'' and it goes on, but that is the point there.

THE COURT (Judge Wisdom):

I have no doubt those factors should be considered but the question is whether they should be considered in a division of the rates.

MR. CERRA:

Yes, sir.

THE COURT (Judge Wisdom):

And you still have the statutory provision against discrimination.

MR. CERRA:

Now the statutory provision you are talking about on discrimination is 3(1)?

THE COURT (Judge Wisdom):

Yes.

MR. CERRA:

3(1), discrimination in freight rates between regions?

THE COURT (Judge Wisdom):

Ordinarily it's between shippers, I realize that it is ordinarily between shippers, but are there any cases involving rates?

[113]

MR. CERRA:

Oh, yes, the New York case is a regional case under Section 3 (1), your Honor, yes, region. But there, again—

THE COURT (Judge Wisdom):

Is there a legislative history on this section? Is there legislative history on it?

MR. CERRA:

3 (1)? There is some legislative history on it when regions were included within the terms of Section 3(1); I believe it was in 1940 as Governor Sanders said this morning.

But the point we are trying to make here, and I think the most significant point, is that these freight rates are in existence, and the only squabble now is how are the carriers going to divide them. All right,—

THE COURT (Judge Wisdom):

You mean the freight rates already include these passenger deficits?

MR. CERRA:

They include all the costs; they are based on those costs. Now, the Commission must determine how are they going to divide these freight rates the shippers pay between the carriers who participate in the movement? Now, as Mr. Kaier has indicated they are in there and

[114]

you are going to divide them, of course, in accordance with the way your costs are in there—the cost of handling on one side of the border and the other side.

We think that that is a significant point there; we think that in the Commission's determination in pro rating the

passenger deficits which include, for my discussion, the suburban deficits or commuter deficits, it is under an obligation to allocate the costs, the overhead costs which are incurred, among the various segments of the traffice that that railroad has. That is all that they did in this case. It took all of the suburban deficit, all of the passenger deficit of the southern lines, and all of the passenger deficit of the northern lines, and allocated it in proportion that that bears—that that traffic bears to the total traffic handled by the road, et cetera.

Now, there are basically—there is basically one further point which in reply brief, plaintiffs have urged, and that is the consideration of the Chenery Rule.

To express the Chenery Rule, it is but a simple, fundamental rule of administrative law that a reviewing court will judge the propriety of the agency action solely on the ground that the agency urges and that they can't accept appellate pro hac rationalization in

[115]

every area.

When the Commission dismissed their cost adjustments—

THE COURT (Judge Wisdom):

Contrary to the rule with regard to courts, district courts; if the judgment is sound for any reason—

MR. CERRA:

You would have to sustain it, that's right, as a court of appeal. But this basically is that in Administrative—

THE COURT (Judge Wisdom):

I see there might be a difference with regard to administrative agencies.

MR. CERRA:

Yes, because you never know whether the agency actually had that in mind, in determining the case, and if they didn't say it, counsel can't say it. But in every area which we have in our brief attempted to bring up this rationale of what the Commission said in the report and Commission's findings, we had the Chenery rule on our neck. We think that the claim is clearly wrong because for example plaintiffs contend that defendants' counsel violated the Chenery rule by arguing to the court that the restated Rail Form A costs is appropriate for measuring south-north traffic costs, however, the

[116]

Commission clearly found that Rail Form A average costs as restated by it, this is page 26 of their report, adequately reflects costs attributed to traffic.

It is our argument, of course, based on what the Commission found, and based on the grounds that the Commission invoked that the claim is apparently not well founded. We point them out in our proposed findings, specifying correlation between our statement and what the Commission has actually found.

THE COURT (Judge Wisdom):

And you reach it by following the same formula?

MR. CERRA:

Yes, sir; we tried to; that is correct.

In conclusion, let me say—

THE COURT (Judge Wisdom):

What disposition should we make of the injunction that issued should we remand it?

MR. CERRA:

As I recall, your Honor, the injunction was not granted but protective conditions were imposed.

THE COURT (Judge Wisdom):

I just don't recall that, sir.

MR. CERRA:

As I recall, the injunction was denied with the people getting together and saying if and when the Court should

[117]

ever set it aside, that they would be a pay-back provision of the difference—

THE COURT (Judge Wisdom):

I remember it now.

THE COURT (Judge Hunter):

The northern railroads are now getting the money?

MR. CERRA:

They are getting the money; if it is reversed there will be some arrangement made after appeal, probably to get everything ironed out. I don't think the original injunction issued.

THE COURT (Judge Hunter):

The court was asked for an injunction and refused to issue the injunction; as a result of that refusal, the northern railroads are getting the money. Now, if the case were sent back, remanded to the Commission, what happens to that order?

MR. CERRA:

Well, I would assume, your Honor, that there would want to be an examination of whether there should be an appeal to the Supreme Court, and there would probably follow a request of the court to continue those same condi-

tions pending disposition of the Appeal. We have done that in the other case now pending in the Supreme Court, The Transcontinental Divisions case.

[118]

Those pay-back provisions are continued until the matter is finally disposed.

THE COURT (Judge Wisdom):

Is that case analagous to this case?

MR. CERRA:

Your Honor, there are no cost issues in that case before the Supreme Court; it's simply a question there whether the Commission made adequate findings and whether those findings were made on substantial evidence.

THE COURT (Judge Wisdom):

I was wondering whether it was worth waiting for the Supreme Court?

MR. CERRA:

I don't see any reason why this court would have to wait for the Supreme Court, because I think that the issues here are quite different from what is before the Supreme Court, your Honor. There—and I don't want to get into a dissertation about what that District Court did, but they are different from what issues are presented to this Court today by this hearing.

THE COURT (Judge Wisdom):

I interrupted you when you were about to summarize.

MR. CERRA:

I want to end on this note: We believe we've shown the

[119]

the superficial nature of these allegations concerning or in connection with errors concerning the Commission's costs,

and the other issues involved. While the issues are numerous, we submit that the Commission has adequately disposed, in accordance with the Congressional directive in Section 15(6) of the Act, which permits the Commission to prescribe divisions that are in its practical judgment fair to everyone.

In a final analysis, the question before this Court, besides all the technical points of whether there is power to do it and whether they did do it—if and when the Court gets back to this question, it is: whether the Commission's determination meets those standards. We feel in this case that all of those standards are met and the determination made by the Commission was rational and based on rational findings, and based on evidence; and we hope that the Court will sustain it.

THE COURT (Judge Wisdom):

Couldn't it be said that these deficits are in the nature of overhead? How do you answer that?

MR. TRIENENS:

I would say that if the Court or I should say the Commission were dealing with overall revenue needs, and found that that's the way you had to look at it, you

[120]

had to see about the—all traffic, not just north-south—all the traffic to make sure in these divisions that all the overhead was met, same in the north, do it on an overall revenue needs basis, but that is not the basis on which the Commission decided. They said they were not deciding it on the overall revenue need as measured by rate of return, but were deciding this case on the north-south freight traffic.

There is a great danger, as a matter of policy, there is a great danger if you came along and said "Well, let's con-

sider commuter deficits and this and that," then what would be the incentive to go clean up your own back yard? Why wouldn't you just throw it in the pot and let the other territories help carry the burden. I think as a matter of policy they did the right thing in not trying to use these divisions for revenue needs, but the problem is that when they came and erroneously under their own standards and tossed them in against north-south freight traffic, they went and did through the back door what they said they would not do.

THE COURT (Judge West):

Let me ask you this, Mr. Trienens, I understood a moment ago, and correct me if I misunderstood you, to say that the establishment of the rates was over the

[121]

northern and southern lines and were being used; and that the passenger deficits were taken into consideration in the establishment of the rates. Now, are you taking into consideration the establishment of the rates themselves, or what do the Southern roads have as to equal participation if in fact their deficits were less than, of course, the others? You would be benefitting by higher rates, in effect, more than if they were to eliminate that in establishing the rates.

MR. TRIENENS:

It my understanding that the current rates that are being applied are being applied under a principle and a policy of the Commission that the commuter service ought to pay its own way or that the states and local communities ought to pay it.

I would deny categorically that we are now collecting rates benefitting from commuter deficits, and I say that for several reasons, number one, it is a fact of life, that the Northern Governors, as Governor Sanders mentioned, are

in fact taking over the burden. Why are they doing it? Because Congress and the Commission assumed that they should bear those burden, their own local communities. I say also that in the Florida case, after all King versus the United States was a Florida

[122]

intrastate rate case—the emphasis was, contrary to the argument of counsel, that these facilities were common; that you couldn't discontinue the high speed track necessary to haul vegetables, and also it rested on the concept of common costs.

THE COURT (Judge West):

I understand that. I understand; I wanted to make sure that I got your point, that if you assume that these deficits were used to make the rate, or used in the rate making process, that the thought comes to mind whether you should share in those deficits.

MR. TRIENENS:

But I would like to point out that this is our argument, that the rates, traditionally in the south-north field up to this decision have been divided. And our whole point was that in the old days when there were these discriminatory or differential freight rates, when you found a rate that equal north and south, we divided without any inflation provision. They came along and unified the freight rate and we divided the rates. Freight rates were made uniformly and we divided them uniformly. They are still made uniformly.

THE COURT (Judge West):

Mr. Kaier said a moment ago that there was a period back when there was an inflation on the part of southern

[123]

lines.

MR. TRIENENS:

We got an inflation when and only when the rate was higher in the south. During that same period when the costs were supposedly also higher in the south and we found a rate that made on a uniform basis, we divided that on an equal factors scale.

Now, without going into those cases, they are listed in our brief starting at page 60, and they are discussed in the Southern Governors' brief pages 37 and 38.

And today, till today, when you have a uniform class rate, notwithstanding the commuter deficit—we have uniform class rates, they don't have higher rates because they have commuter deficits than we do, even today we have uniform rates, but the dividing is made, and the basis of this argument, your Honor, in answer to your question—the dividing should be made at each dividing line according to the uniform scale.

THE COURT (Judge Wisdom):

Let me ask you, assuming that the present rates do not include the commuter deficits, they do include the passenger deficits?

MR. TRIENENS:

Generally they reflect the common costs. I'm sure of

[124]

that. Now I want to say on that that the problem of what the rate level has been prior, and I think it's important to the case—but in dealing with what this Commission did, they of course based it on this cost theory; and Mr. Kaier says that, well, this is based on common costs and King is decisive. My point is, and let me get this in first, I'm faced with a Commission report and I am told why they did this. I don't feel that I have to—or that I may properly specu-

late about the King case or other theories because the Commission on page 78 tells us why in this case, why in this case they threw back in commuter costs because suburban service includes common costs, and because there are some common costs we must throw them back in.

Now, mechanically what happened is we came along adjusted these costs and in this particular thing we took out the whole commuter deficit—and I want to make it perfectly clear we took out the Illinois Central Railroad right with the New Haven and right with the Pennsylvania; we took out all of those at once, because each community ought to bear their own burden, as it is solely related, as the northern lines themselves said. The Commission said "Well, we agree, many of those things are solely related, but because—and it's their "because"—some of these are common costs,

[125]

we now throw them all back in. Now, that's the reason they did it, and it doesn't make any sense; and to philosophize about what if they decided on revenue needs instead of costs; what if they divided the rates as made, which they didn't do; what if they relied on King—that would be one of the problems this Court faces if it is going to decide these matters itself.

The Commission merely has to give a rational disposition of this issue under its standards, and we really don't get to all these other things. The Commission, we hope will have to face up to this—it may come out the other way, but if they do, well, at least we will have some basis to see where they started.

THE COURT (Judge Hunter):

Coming back to Judge West's question, if these freight rates were made on the basis of the passenger and commu-

ter deficits then why wouldn't it be equitable to the north to get a bigger proportion?

MR. TRIENENS:

My answer to that was, sir, we do have the uniform rates today; and to the extent that the north has higher commuter deficits they are not reflected in the rates to give them a differential higher rate. I was just trying to answer Judge West, only if the Commission got out another decision in its class rate case and de-

[126]

parted from New York versus United States and say we are going to have higher rates in the north because of commuter deficits, then I would have to face up to it; but they haven't done it yet. We are happy to divide these rates on a uniform basis.

THE COURT (Judge Hunter):

If the rates are the same on this north-south traffic, the northern shipper pays the same as the southern shipper pays, but if that rate is higher because of the northern commuter service, then would that be a consideration?

MR. TRIENENS:

Then, too, since counsel accurately stated that this is spread, pro-rated over all freight traffic, if that supposition is true, your Honor, then the northern intra-north rate would be higher than the southern intra-south rate and the southern shippers would have the advantage of a differentially lower basis on intra-territorial freight which they do not have today, because the rates are equal.

THE COURT (Judge Hunter):

Let me be sure that I understand. It seems to me you are emphasizing, and it may be I am all haywire, but you

seem to be saying that the Commission started by saying "All we have to consider here is north-south

[127]

freight costs." That is all they were going to consider; and you say their fatal error was in considering other things?

MR. TRIENENS:

The fatal error was in applying that standard. You see initially I take the standard, first the ground they relied upon was north-south freight, and I say if that is the test, then, in finding this inflation they have injected into this thing, things that do not meet their own test; their finding as to why they have the commuter solely related finding and why they have these higher interchanges; and findings of higher costs—these don't relate to their own standard, and are not supported by substantial evidence under their own standard, which is north-south freight traffic.

THE COURT (Judge Hunter):

All right. Well, now, what you are saying is that they set up a standard, too, that does not include the King consideration and that they included King.

MR. TRIENENS:

I don't think they did include the King consideration. I don't think they did; and the reason I say that is this, when you get to the page that deals with the commuter deficits, I think they covered the King consideration insofar as the costs are common, because the only

[128]

clue I've got as to why they threw in the commuter costs is because they talk about the common; but I haven't got any clue—King or any clue—as to how they took these solely related commuter costs into the north-south freight traffic.

THE COURT (Judge Hunter):

What does common mean?

MR. TRIENENS:

By common I assume they mean they go over the same tracks, same bridges on some part of the commuter haul.

THE COURT (Judge Hunter):

And you are talking about common for the northern traffic, freight and commuter?

MR. TRIENENS:

That's right, and granted, common to a part of the north-south traffic that would go over that line if there be any.

And there are—Commuter trains sometimes go out and come in on the same lines that are used by freight trains, and to the extent that that is so, to the extent they're common then they go against freight, and if we have some of the freight, then so be it.

But as we have emphasized—I was told I didn't argue that before the Commission; I argued all these points as examples of what was going on. It may well

[129]

be that Mr. McDonald argued about the commuters, but we have argued from the day the Southern Railway put in its evidence, the cost man put it in, the common misapprehension about the commuter costs being in common, this business of imposing a burden on the south—it was argued before the examiners, and the Commission ruled on it. I don't think there is any problem that we raised it, because the Commission ruled on it, here is their ruling and it doesn't make sense.

In closing I have two points that do not deal with commuters. We have to deal with this report, it doesn't make

sense and there is no justification for the solely related costs.

I ask as to these other points, and I would like to say just one word generally about these costs.

We have set forth in the foot notes to our brief, perhaps we should have spelled it out on a whole page—but it is a foot note at the bottom of 7 and it goes through to 8—

THE COURT (Judge Wisdom):

Which brief?

MR. TRIENENS:

Our reply brief, your Honor.

This spells out and gives the cases and authorities

[130]

that show overall average costs were used in the class rate investigation and were intended to deal with averages. Averages are a lot of things; the north is a different economy today from the south; maybe it has changed, and maybe in the next generation they will be much more similar, but today they are handling a lot of manufactured goods, auto parts back and forth, and naturally some of their averages are higher and the quality of service is different. In our operations we are hauling pulpwood back and forth, which is very cheap, of course, and that affects your averages. One of our problems here is Commission says, "Well, pulpwood is very cheap"—that is one of the things we have never gotten reconciled—but our point here is that you are dealing with very different concepts of the total problem and some of the averages naturally are higher averages in the north; the average costs of handling auto parts back and forth are higher than where you are handling other commodities. It's when you get to the same traffic—after all, we are partners in the north-south traffic, and when you are handling the same traffic, you have to

focus on that; and that is where you don't find the difference.

I would love to spend some time analyzing the

[131]

so-called L & N versus Southern case; it was represented to you that that involved all these cost issues. We looked to that case for guidance. I would like to—

THE COURT (Judge Wisdom):

We are going to give you thirty days in which to file a brief; it need not be printed, so if you feel that anything was left out, or if you feel you should analyze this case a little more than you have, you will have an opportunity to do so. Is thirty days sufficient time?

MR. KAIER:

On what subject?

THE COURT (Judge Wisdom):

On any subject you care to brief. Mr. Trienens has just suggested that he would like to have time to analyze this case.

MR. TRIENENS:

Now, Your Honor, I meant that as a preface.

THE COURT (Judge Wisdom):

Well, there is no reason why you shouldn't. We feel that if you think that there is anything further to say we want to read it.

MR. KAIER:

Thirty days would be sufficient for us.

THE COURT (Judge Wisdom):

Well, we feel that the briefs should be filed simul-

[132]

taneously. No one will be taken by any surprise.

MR. KAIER:

I think it would be well if we could agree, your Honor, so we will know.

MR. TRIENENS:

Well, as a matter of fact, there is this matter of the L & N case, and I have before me the motion to affirm which was filed in the Supreme Court by the Justice Department and by the Commission; it's very short—

THE COURT (Judge Wisdom):

Let me put it this way: The Court doesn't want the scope necessarily confined, and you can write about what you please, but certainly in order that the briefs will meet the issues, I think that counsel should get together on the topics, and should agree on the topics.

MR. TRIENENS:

If I may ask leave of court to lodge this motion to affirm, a public document of the Supreme Court, I think that will relieve us from having to discuss that any further.

THE COURT (Judge Wisdom):

Suppose you do that and the clerk will receive it.

MR. TRIENENS:

We have no further argument.

THE COURT (Judge Wisdom):

[133]

You have no further argument, Mr. Kaier?

MR. KAIER:

No, your Honor.

THE COURT (Judge Wisdom):

Well, it was a very enlightening argument and very enlightening briefs and the Court appreciates the excellent presentation.

(Whereupon at 1:20 o'clock P.M. Court adjourned.)

[134]

THE UNDERSIGNED in his capacity of Official Court Reporter, United States District Court, Eastern District of Louisiana, hereby certifies the above and foregoing one hundred thirty-three (133) pages constitute the transcript of his original stenographic record made in the above entitled and numbered cause heard in open Court at New Orleans, Louisiana, on Monday, December 12, 1966, before the Honorable John Minor Wisdom, United States Circuit Judge; the Honorable E. Gordon West, and the Honorable Edwin F. Hunter, United States District Judges presiding.

BATON ROUGE, LOUISIANA

DECEMBER 19, 1966.

FELIX L. OLIVIER
Official Court Reporter

Opinion of the District Court

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

No. 15454

ABERDEEN AND ROCKFISH RAILROAD COMPANY, ET AL.,
Plaintiffs

v.

THE UNITED STATES OF AMERICA AND THE INTERSTATE COMMERCE COMMISSION,
Defendants.

Before WISDOM, *Circuit Judge,* and HUNTER and WEST, *District Judges.*

HUNTER, *District Judge:*

This is an action to set aside and enjoin in part the order of the Interstate Commerce Commission (Commission) in Docket No. 29885,[1] *Official-Southern Divisions,* 325 I.C.C. 1 and 325 I.C.C. 449, which prescribed divisions of

1. Also embracing No. 29799, Akron, Canton & Youngstown R.R. Co., et al. v. Aberdeen & Rockfish R.R. Co., et al.

joint-rail rates on freight traffic moving between Official and Southern territories.[2]

Freight traffic between the North and the South moves on joint rates which are established when two or more carriers publish a single charge to be paid by the shipper for carriage from the originating point on one line to a destination on another. The proportion of the joint rates which each line receives as its share is called a "division" which is normally determined by agreement among the participating carriers. Prior to the orders of the Commission in this proceeding, the primary divisions accruing from Official-Southern traffic were made under an equal-factor scale prescribed by the Commission itself in its 1953 decision in Docket No. 29885 (officially reported at 287 I.C.C. 497). This decision followed the landmark decision of the Commission in *Class Rates Investigation, 1939*, 262 I.C.C. 447 (1945), wherein the Commission found that the higher rate level which was at that time applicable to the movement of rail freight in Southern territory, constituted an unlawful discrimination against the South.[3] In the *Class Rates* proceeding, the Commission ordered the discriminatory class rate structure eliminated and replaced with a uniform rate structure to be applicable throughout the United States east of the Rocky Mountains. In the *Divisions* case that immediately followed the order removing the territorial differences in class rates, the Commission ordered that, in line with the new uniform class rates, a uniform divisional scale be used by both Northern and Southern railroads in dividing revenues from North-South

---

2. Official territory lies generally east of the Mississippi River and north of the Ohio River and certain points in Virginia. Southern territory lies generally east of the Mississippi River and south of Official territory.

3. The Supreme Court sustained this action in New York v. United States, 331 U.S. 284 (1947). The uniform rates prescribed by the Commission became effective in 1952. *Class Rates Investigation, 1939*, 281 I.C.C. 213 (1951).

traffic. *Official-Southern Divisions,* 287 I.C.C. 497, 523, 546-47 (1953).[4]

In 1956, the Northern railroads, dissatisfied with this equal-factor basis of dividing joint rates, called upon the Commission's statutory authority to determine that the joint rate divisions "are or will be unjust, unreasonable, inequitable or unduly preferential" and to prescribe "just, reasonable and equitable divisions" in their place (49 U.S.C.A. 15(6)).

Upon completion of the hearings, issuance of an Examiners' Report, exceptions and replies thereto, and after hearing oral argument, the Commission issued its 1965 report and order finding that the existing divisions were in violation of Section 15(6). Considering each of the Section 15(6) criteria, the Commission found that both groups of carriers were being operated efficiently and that neither group should be considered as more or less efficient than the other (325 I.C.C. at 18), that there were no dif-

4. "Divisional scales," are the form in which the Commission has consistently prescribed divisions of North-South revenues. Divisional scales are simply tools for determining percentage divisions by a most elementary use of the common fraction. The use of the uniform divisional scale prescribed by the Commission in 1953 may be illustrated for a shipment moving 200 miles in the North and 400 miles in the South. The Northern factor on such shipment under the uniform scale is 101; the Southern factor is 149. Accordingly, the Northern division would be 40.4% (101 divided by 250, or 101 plus 149); the Southern division would be 59.6% (149 divided by 250). Where the 400-mile haul is in the North and the 200-mile haul is in the South, the Northern division is 59.6% and the Southern division is 40.4%. For shipments moving equal distances in the two territories, the equal-factor scale yields equal divisions, as can be shown by an example of a shipment moving 300 miles in the North and 300 miles in the South. The factor prescribed for a 300-mile haul is the same in each territory (125) (287 I.C.C. at 552, Col. 1). As a result, the percentage division for the North is 50% (125 divided by 250) and for the South is also 50%. Thus, under the uniform scale prescribed in 1953, Northern and Southern railroads each received the same compensation from joint revenues for performing the same amount of service in carrying North-South traffic in their respective territories.

ferences in importance to the public attributable to the two railroad groups (325 I.C.C. at 28), that neither group had greater revenue needs than the other (325 I.C.C. at 49), but that there is a decisive difference in the relative costs of rendering the service as between the groups of carriers (325 I.C.C. at 50).

Finding everything else to be substantially equal and that an adjustment in the existing divisions was required to compensate the respective carriers according to their expenditures in the joint effort of handling the traffic, the Commission concluded that the relative costs of the parties can properly serve as a guide for the determination of just, reasonable, and equitable divisions for the future (325 I.C.C. at 50).

The order prescribed a new divisional formula which gives the Northern railroads 45% more than the Southern railroads for each terminal service performed and 10% more than the Southern railroads for each mile of line-haul service performed. The Commission went on to construct new scales which reflected the principles affecting long versus short hauls and then prescribed a scale of divisional factors based on fully distributed costs which divide the revenue in proportion to those costs (325 I.C.C. at 50-51). The net effect of the Commission's action was to reduce the revenue of the Southern railroads by $8,838,000.[5]

The action in this Court was originally brought by forty-two (42) railroads which together made up virtually the entire rail system in the States of Alabama, Florida,

---

5. The Commission found that the net effect of the scales which it prescribed would be to reduce the revenues of the Southern railroads by $7,948,004 (325 I.C.C. at 50). The Commission's calculation was based upon "an overall estimate" and the Commission abandoned any defense of the accuracy of that calculation in its supplemental report, taking the position that it need not find the revenue effect of its action (325 I.C.C. at 453, 454).

Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina and Tennessee. The Southern Governors' Conference and the Southeastern Association of Railroad and Utilities Commissioners filed an intervening complaint asking that the Commission's action be set aside in part. Forty-eight (48) railroads serving primarily Northern areas intervened in defense of the Commission's order.

It should be noted that plaintiffs do not seek to set aside the order in its entirety. Their argument is that the Commission determined two precise issues which are severable, namely: (1) whether the Northern lines were entitled to an increase in their divisions because of higher costs than the Southern lines, and (2) whether the old scale of divisional factors was invalid because of an excessive terminal element of 37 integers in the initial mileage block. The effect of the Commission's action on the two subjects (as petitioners put it) would be:

(1) The reconstruction of the divisional scale benefited the Southern railroads by $7,426,000 annually.

(2) The inflations accorded the Northern railroads reduced the Southern railroads by $16,264,000 annually.

(3) The net effect of these two computations was to reduce the revenue of the Southern railroads by $8,838,000.

Plaintiffs argue that we possess the power and should set aside as unlawful only that part of the order which prescribed increased divisions for the Northern lines. They further contend that such action would leave in force the old uniform scale, minus 37 integers which resulted from the Commission's alleged "separate action correcting the excessive terminal factors in the existing uniform divisional scale." This Court, it is true, by virtue of its authority under 28 U.S.C.A. 2321, has the power to "set aside in whole or in part" an order of the Commission, and there

are situations where provisions excised from administrative orders are separable or so minor as to make remand inappropriate. This is certainly not the case here. The Commission gave weight to the plaintiffs' initial mileage block argument only "in light of our subsequent conclusion to be guided by the relative costs in our general determination * * *." It cannot be known what the Commission would have done with respect to giving weight to that argument if it were viewed independent of the other facts which induced the Commission to prescribe the divisional bases which it did prescribe.

The Commission determined only one issue in two steps, (I.E.) it determined the unlawfulness of the old divisions and prescribed new divisions for the future. If the plaintiff succeeds here in permanently setting aside the Commission's order as it prescribes the new divisional scales, there would remain no severable part of the order. This is true because there is nothing whatever in the record to even suggest that the Commission found reasonable (provisionally; contingently, or otherwise) any basis of divisions other than that which plaintiffs seek to annul in this action. Accordingly, since the Commission's order is not severable and this Court lacks jurisdiction to prescribe divisions, the the function of this Court ends if it finds the Commission's order prescribing divisions is contrary to law or unsupported by adequate findings or substantial evidence. *F.P.C. v. Idaho Power Company*, 344 U.S. 17 (1952); *Saltzberg v. United States*, 176 F. Supp. 867 (S.D. N.Y. 1959).

We proceed to a review of the Commission's findings, conclusions and the evidence. The applicable standards of judicial review are limited in scope by settled principles of Administrative law, both general[6] and statutory.[7] These standards are to be vigorously enforced.

---

6. See Roadway Express, Inc. v. United States, 213 F. Supp. 868, 873 nn. 18 & 19 (D.C. Del. 1963), aff'd, 375 U.S. 12, 84 S. Ct. 53, 11 L. Ed. 2d 38 (1963).

7. 5 U.S.C.A. § 1009(e); 5 U.S.C.A. 1007(b).

In *Burlington Truck Lines v. United States*, 371 U.S. 156, 167-168 (1962), the Supreme Court stated:

> "Expert discretion is the life blood of the administrative process, but 'unless we make the requirements for administrative action strict and demanding, *expertise*, the strength of modern government, can become a monster which rules with no practical limits on its discretion.' *New York v. United States*, 342 U.S. 882, 884 (dissenting opinion). 'Congress did not purport to transfer its legislative power to the unbounded discretion of the regulatory body.' *Federal Communications Comm'n v. RCA Communications, Inc.*, 346 U.S. 86, 90. The Commission must exercise its discretion under § 207(a) within the bounds expressed by the standard of 'public convenience and necessity.' Compare *id.*, at 91. And for the courts to determine whether the agency *has* done so, it must 'disclose the basis of its order' and 'give clear indication that it has exercised the discretion with which Congress has empowered it.' *Phelps Dodge Corp. v. Labor Board*, 313 U.S. 177, 197. The agency must make findings that support its decision, and those findings must be supported by substantial evidence. *Interstate Commerce Comm'n v. J-T Transport Co.*, 368 U.S. 81, 93; *United States v. Carolina Carriers Corp.*, 315 U.S. 475, 488-489; *United States v. Chicago, M., St. P. & P.R. Co.*, 294 U.S. 499, 511."

The statutory standards of judicial review are found in the administrative Procedure Act, which provides, to the extent here pertinent, that the reviewing court shall:

> "hold unlawful and set aside agency action, findings, and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; * * * (5) unsupported by substantial evidence in any case * * * reviewed on the record of an agency hearing provided by statute * * *. In making

the foregoing determinations the court shall review the whole record or such portions thereof as may be cited by any party, and due account shall be taken of the rule of prejudicial error." (5 U.S.C.A. 1009(e)).

* * *

"Section 8(b)—

"Prior to each recommended, initial, or tentative decision, or decision upon agency review of the decision of subordinate officers the parties shall be afforded a reasonable opportunity to submit for the consideration of the officers participating in such decisions (1) proposed findings and conclusions, or (2) exceptions to the decisions or recommended decisions of subordinate officers or to tentative agency decisions, and (3) supporting reasons for such exceptions or proposed findings or conclusions. The record shall show the ruling upon each such finding, conclusion, or exception presented. All decisions (including initial, recommended, or tentative decisions) shall become a part of the record and include a statement of (1) findings and conclusions, as well as the reasons or basis therefor, upon all the material issues of fact, law, or discretion presented on the record; and (2) the appropriate rule, order, sanction, relief, or denial thereof." (5 U.S.C.A. 1007(b)).

The statutory duty of the Commission is clear. Section 15(6) of the Interstate Commerce Act, 49 U.S.C.A. 15(6), directs it to set aside inequitable divisions of joint rates and then prescribe equitable ones. The ICC is explicitly directed to consider relative efficiency, public interest, terminal costs, revenue needs, and any facts which would, without regard to the mileage haul, entitle one carrier to a greater or lesser proportion of the joint rate. Among the "other facts" which the Commission may consider is the cost of service of the participating carriers, which issue may be entirely different from the issue of revenue needs. *Baltimore and Ohio RR v. United States,*

298 U.S. at p. 360. Here, the divisions were prescribed solely on the basis of the relative costs of handling the specific freight traffic at issue. The Commission said:

> "Everything else being substantially equal, the relative costs of the parties reflecting their respective operations as to this traffic can properly serve, as here, as a guide for the determination of just, reasonable, and equitable divisions." 325 I.C.C. at p. 50.

A fundamental rule of administrative law is that a reviewing court, in dealing with a determination of an administrative agency must judge the propriety of that action solely on the basis invoked by the agency. If this basis is inadequate, the court is powerless to affirm the administrative action. *S.E.C. v. Chenery Corp.*, 332 U.S. 194 (1947).

The *Chenery* rule was expressly applied in the review of an order of the Interstate Commerce Commission under the Administrative Procedure Act in *Burlington Truck Lines v. United States*, 371 U.S. 156, 168-169 (1962). The Supreme Court reaffirmed these rulings again in *N.L.R.B. v. Metropolitan Life Ins. Co.*, 380 U.S. 438, 443-444 (1965):

> "* * * the integrity of the administrative process requires that 'courts may not accept appellate counsel's post hoc rationalizations for agency action * * *.' Burlington Truck Lines v. United States, supra, 371 U.S. at 168; see Securities & Exchange Comm'n v. Chenery Corp., 332 U.S. 194, 196. For reviewing courts to substitute counsel's rationale or their discretion for that of the Board is incompatible with the orderly function of the process of judicial review. Such action would not vindicate, but would deprecate the administrative process for it would 'propel the court into the domain which Congress has set aside exclusively for the administrative agency.' Securities & Exchange Comm'n v. Chenery Corp., supra, 332 U.S. at 196."

This brings us to what petitioners refer to as the fundamental error, which affects virtually all of the Commissions's cost determinations. They put it this way: The higher costs claimed by the Northern railroads were found to have been incurred in handling this specific traffic in issue, but when it came to determining the relative costs which were to control this divisional formula, the Commission in at least seven instances relied, not upon the actual costs incurred by the two groups of railroads on the traffic in issue, but upon the unadjusted average costs incurred by the railroads on the average of all traffic handled in their respective territories. The Commission's rebuttal to this assertion appears on Page 6 of the Commission's original brief:

> "In a comprehensive analysis rejecting seven of Southern lines' adjustments as unsound in concept or based upon unsupported inapplicable facts or assumptions, the Commission accepted the Rail Form A costs, as restated by it, as reliably and accurately reflecting the costs attributable to the handling of North-South traffic. Whether these costs were adequate and whether they should have been more refined or supplemented as plaintiffs desired, are questions of fact within the exclusive competence of the Commission to determine, which were determined here and are based upon substantial evidence of record.

The Northern lines insisted throughout the hearing that unadjusted Rail Form A[8] costs reliably and accu-

8. Rail Form A is a formula for assigning the territorial or systemwide costs of operation including rents and taxes for any given year to the service units (ton-mile, car-miles, switching time, etc.) performed by the railroads during that year. This procedure assigns the costs as between those that are incurred in the origination and termination of a shipment, which are applicable to all shipments regardless of the distance of movement (terminal expenses), and those costs which are incurred in moving a shipment between the origin and destination points (line-haul expenses). It is adaptable for use in ascertaining the service unit costs of a single railroad or a group of railroads collectively. Territorial average costs here were based on the expenses and operations for 1956.

rately reflect the costs attributable to the handling of the traffic at issue. Only a relatively few elements of the Northern railroads' average costs are higher than the Southern railroads' costs. It is uncontroverted on this record that most elements of railroad costs (such as operating trains, maintaining roadways, etc.) are no higher in Northern railroads than for the Southern railroads. The inflation in the costs is attributable to a relatively few cost items. These include the cost of commuter operations, the cost of interchanging cars, the ratio of empty to loaded cars, the cost of railroad freight cars, and a few other items. As to each of these controverted items, the Commission relied exclusively on territorial average costs (Rail Form A). This was pegged on a finding that Rail Form A costs were reliable and reflected the costs attributable to the handling of the specific traffic. The theory is that in broadly based proceedings and interterritorial division cases, the territorial costs are entitled without more to full credence and weight as the initial indication of what would be fair and equitable. The Commission concluded in each of these instances that Rail Form A provided more reliable data for application to the Official-Southern traffic than did the adjustments prepared by the Southern lines. The Commission took no independent action to require the development of more refined cost data. Typical of this approach is the conclusion made by the Commission, in disposing of petitioners' request for an adjustment of switching costs:

> "For these reasons, we conclude that the contions of the northern lines are of merit and that Rail Form A territorial average switching costs more accurately measure the relative switching costs on each side of the border of the official-southern traffic than the switching costs computed by the southern lines." 325 I.C.C. at page 77.

Plaintiffs and intervening plaintiffs urge some 31 propositions as reflected in the Pre-Trial Order, but their

briefs resolve them into 17 separate questions of which the great majority relate to the Commission's treatment of relevant service costs. These are:

1. Section 7(c) of the Administrative Procedure Act provides that "The proponent of a rule or order shall have the burden of proof" (5 U.S.C. § 1006(c)); and this provision has been held to apply to proponents of changes in existing rate divisions. The Northern railroads here failed to satisfy their burden of proof, and the Commission failed to enforce that burden and thus violated Section 7(c) when it permitted the Northern railroads to rely entirely upon territorial average evidence, without showing that such averages were applicable to North-South freight traffic.

2. The Northern railroads had a duty to come forward with relevant evidence in their sole possession necessary to resolve the issues raised when the Southern railroads challenged the application of territorial average costs of all traffic to North-South traffic. The Commission erred in failing to enforce this duty and in holding instead that the absence of adequate and comparable evidence was a ground for resolving those issues against the Southern railroads.

3. The Commission has power to require the development of adequate and comparable cost data. Section 20(1) of the Act expressly grants the Commission the power "to require the carriers to provide full, true and correct answers to all questions upon which the Commission may deem information to be necessary" (49 U.S.C. § 20(1)). The Commission has a duty to use its powers to obtain cost evidence where such evidence is necessary to assure an adequate record. That duty was violated here as the Commission failed to take affirmative action to require the development of an adequate record as to the actual costs of handling the North-South traffic at issue.

4. Section 8(b) of the Administrative Procedure Act requires the Commission to "rule upon each * * * exception presented" (5 U.S. § 1007(b)). The Commission violated its statutory duty by failing to rule upon the Southern railroads' "Exception No. 1" dealing with the burden of proof, the duty of the party in possession of relevant evidence to come forward with it and the power and duty of the Commission to require a complete record.

5. The Commission stated as its standard the costs of handling North-South freight traffic, its reliance upon territorial average costs caused it to include in the Northern costs which it found, the Northern deficits from suburban commuter passenger service operations. This action constitutes a violation of both Sections 8(b) and 10(e) of the Administrative Procedure Act when judged against the standard stated by the Commission itself as governing in this case—that is, the relative costs of handling North-South freight traffic. The Commission made no reasoned findings and had before it no substantial evidence on which such a conclusion might be based. The lack of rational basis for the Commission's conclusion is highlighted by the Commission's own inconsistent finding that "many individual items of suburban service can be considered solely related * * * to suburban service" (325 I.C.C. at 78).

6. The Commission's prescription of divisions based on costs which include a separate allowance for "border interchange service" 58% higher for the North than for the South violates the requirement that the Commission's findings and conclusions be supported by substantial evidence within the meaning of Section 10(e) of the Administrative Procedure Act.

7. The Commission's action in using 32% higher car costs for the Northern railroads than for the Southern railroads violates Sections 8(b) and 10(e) of the Administrative Procedure Act since there were no reasoned findings

to support that action, nor was there substantial evidence in the record to support such a finding.

8. Section 15(6) of the Interstate Commerce Act provides that in a divisions case the Commission is to determine the costs incurred by the respective railroads which are "applicable to the transportation of passengers or property," a determination which has nothing whatever to do with the financial results of car rentals. Since the Commission's finding of 32% higher Northern car costs is in substantial part of the product of the greater amount of car rentals received by the Southern railroads (on traffic other than North-South traffic), the Commission's action also violates Section 15(6) because it fails to differentiate the railroads' separate function as car-owning or renting agencies as compared with their function as transportation agencies.

9. The Commission's use of territorial averages in computing the "switching costs" of the Northern and Southern railroads rather than the specific costs incurred by those railroads with respect to North-South traffic is not supported by reasoned findings and not based on substantial evidence in the record and thus violates Sections 8(b) and 10(e) of the Administrative Procedure Act. In addition, the Commission's rejection of the Southern railroads' special studies of switching costs on the traffic at issue because there were no comparable studies of Northern costs constitutes a violation of Section 7(c) of the Administrative Procedure Act in that it places the burden of proof on the Southern railroads rather than the proponents of the Northern inflation who had the evidence in their sole possession.

10. The Commission's use of territorial average "empty return ratios" rather than the actual empty return ratios for the North-South traffic in issue also violates Sections 8(b) and 10(e) of the Administrative Procedure Act.

because it is unsupported by reasoned findings and not based on substantial evidence in the record. This also violates Section 7(c) of the Administrative Procedure Act which puts the burden of proof on the proponent of change, and the principle that those in possession of relevant data are obliged to come forward with it.

11. The Commission's inconsistent counting of cars interchanged and terminated and its rejection of the Southern railroads' attempts to correct that inconsistency violate the burden-of-proof provisions of Section 7(c) of the Administrative Procedure Act, the principle that those in possession of relevant evidence are obliged to come forward with it, and the obligation of the Commission to assure the making of an adequate record.

12. The Commission's use of territorial averages in dealing with the constant cost of transit commodities and its rejection of Southern adjustments designed to reflect the costs associated with North-South traffic also constitute violations of the burden-of-proof provisions of Section 7(c), the principle that those in possession of relevant evidence are obliged to come forward with it, and the obligation of the Commission to assure the making of an adequate record.

13. The "typical evidence rule" requires that there must be evidence typical in character and ample in quantity with respect to the divisions and services performed under the particular rate being divided. The Commission must consider evidence of actual services performed on particular traffic involved, and not rely wholly on averages which "are apt to be misleading." *United States v. Abilene & Southern R. Co.*, 265 U.S. 274 (1924), at p. 291; *Atchison, Topeka & Santa Fe R. Co. v. United States*, 225 F. Supp. 584, 592-600 (D. Colo. 1964).

14. The Commission's departure from uniform divisions related to uniform rate levels is not supported by the

reasoned explanation required by Section 8(b) of the Administrative Procedure Act.

Other alleged errors are:

15. The Commission's Supplemental Report invoked its quasi-judicial powers to decide this case as an aid to its executive function of defending its order before the Court. This resulted in an unconstitutional denial of notice and an opportunity to be heard. *Atchison, T. & S.F. Ry. Co. v. United States,* 231 F. Supp. 422, 428 (N.D. Ill. 1964).

16. Section 7(d) of the Administrative Procedure Act (5 U.S.C. § 1006(d)) requires that: "The transcript of testimony and exhibits, together with all papers and requests filed in the proceeding, shall constitute the exclusive record for decision * * *." The Due Process Clause of the Federal Constitution requires also that the Commission not go outside the record in reaching its decisions. The Commission violated both of these provisions when its use of its Cost Finding Section led it to rely on data not contained in the record in three separate instances.

17. The Commission's conclusion that the North suffers from inherent disadvantages in transportation conditions was supported by neither reasoned findings in the Commission's report as required by Section 8(b) of the Administrative Procedure Act, nor by substantial evidence, as contemplated by Section 10(e) of that Act.

Propositions 15 and 16 may be readily disposed of. The Commission's use of its Cost Section to give technical aid in analysis and evaluation of the cost evidence of record was an integral part of this administrative proceeding. This infringed the rights of no one.[9] The Commission's

9. The Commission's use of its staff assistants was specifically approved in T.S.C. Motor Freight Lines, Inc. v. United States, 186 F. Supp. 777 (S.D. Tex., 1960), aff'd sub nom. Herrin Transp. Co. v. United States, 366 U.S. 419 (1961).

issuance of its supplemental report was lawful and proper and constituted sound administrative practice.[10] Moreover, in issuing its supplemental report the Commission did not change its outstanding order in any respect, except as to divisions of the Norfolk Southern Railway, which is not here challenged.

Proposition 17 requires amplification. The failure to draw a clear line of demarcation between findings of fact, summaries, analyses and discussion had contributed heavily to the difficulty of reviewing this case. Intervening plaintiffs insisted before the Commission that for at least 30 years prior to this case, the Commission has consistently followed the view that primary responsibilty for meeting the costs and revenue needs of any territory lies with the people and industry of that territory, and that deviation from the equal division factor now in effect can be justified under 15(6) of the Act only if the higher costs found to exist are brought about by inherent territorial disadvantages. This is so, they say, because differences in cost which cannot be related to such inherent disadvantages might well be the product of nothing more than inefficiency or overcapacity on the part of one group of railroads. Plaintiffs insist that this was the express principle enunciated by the Supreme Court in *New York v. United States,* 331 U.S. 284. The Commission was cognizant of this contention, which was the main thesis of intervening plaintiffs before the Commission, and handled it as follows:

> "Relying on *New York v. United States,* 331 U.S. 284, 315 (1947), the interveners also take the position that natural disadvantages must be found in the North before we may increase the divisions of the northern railroads. In essence, however, other factors being equal, cost differences generally are the product of,

10. Alamo Express, Inc. v. United States, 239 F. Supp. 694, 697, 698 (W.D. Tex., 1965), aff'd 382 U.S. 19; Donaldson v. Read Magazine, 333 U.S. 178 (1948).

and reflect, the inherent advantages and disadvantages that go to make up the respective overall transportation conditions in the two territories." (Pgs. 27-28).

Plaintiffs read this language as an implicit holding by the Commission that the North suffers from inherent territorial disadvantages and a recognition of their judicial construction of Section 15(6), (i.e.) that only cost differences related to inherent disadvantages should be permitted to serve as a basis for an increase in interterritorial divisions. Defendants' answer to this is that the Commission made no finding on this question at all and "were simply commenting on Intervenors' contention." Surely, the Commission report should be so phrased that there be no room for such a dispute as this. We have read the language carefully and we have some hesitation in saying which interpretation is correct. The question of whether a showing of inherent disadvantages is prerequisite to an increase in territorial divisions is, at least in the first instance, a question for the Commission. If, as petitioners read the report, the Commission has held that such a showing is necessary, then this Court need only consider whether in view of such a test, the requirements of reasoned findings and substantial evidence of Sections 8(b) and 10(e) of the Administrative Procedure Act have been met. If, on the other hand, as defendants contend, the Commission has made no holding on the question of inherent disadvantages, the Court must consider whether the Commission's failure to resolve the material issue raised with respect to that question can be reconciled with the express requirement of Section 8(b). We are considering not a restriction upon the statutory powers of the Commission to make divisions, but whether the Commission followed requirements of the Administratve Procedure Act. The Administrative Procedure Act requires findings on material issues of law. N.L.R.B. v. Hearst Publications, 322 U.S. 111 (1944). If, as plaintiffs assert, the Commission has held that a showing

of inherent disadvantages is a pre-requisite to an increase in territorial divisions, then the Commission's conclusion (that higher Northern costs reflect inherent territorial disadvantages) is subject to attack because there are no findings as to what these inherent territorial disadvantages consisted of. Intervening plaintiffs have consistently and strenuously made the contention that as a matter of law the Northern railroads cannot have an increase in the absence of inherent territorial disadvantages. This case is to be remanded *for other reasons.* Upon remand, the Commission should decide and dispose of this contention in accordance with the Administrative Procedure Act.

The remaining exceptions to which we must address ourselves relate to cost evidence. Reduced to its simplest terms, the situation is this: All agree that the relevant costs are those of the North-South freight traffic to which the divisions apply. However, when it came to determining the relative costs which were to control this divisional formula, the Commission relied upon the actual costs incurred on the average of all traffic handled in the respective territories.[11] The Commission, as to each of seven specific items of unit cost (which account for the entire inflation) decided that the Northern lines established a prima facie case that Rail Form A costs properly measure the cost of the specific traffic.[12] In each instance the Southern lines introduced evidence and sought adjustments to reflect what they contended to be the actual cost of the specific traffic. In each instance the Commission rejected these adjustments, and employed Rail Form A territorial unit costs as accurately representing the cost of service. The Commis-

11. The North-South traffic in issue constitutes on 6.0% of the total freight revenue of the Northern railroads and constitutes 21.4% of the total freight revenue of the Southern railroads (V.S. 36, Ex. 5).

12. The Northern lines presented a train utilization study, which revealed that of the total of 13,647 loaded trains shown for five study lines for a selected week in May of 1959, 6,099 trains representing 44.7% were found to be transporting at least one loaded car moving from or destined to Southern territory.

sion did not assume any responsibility for the development of a more adequate record, and in several instances held that the absence of comparable evidence in the record itself prevented adjustments in territorial averages.[13]

Typical of the overall approach of the Commission was its inclusion of suburban passenger deficits as a part of the cost of handling North-South traffic. Through the use of average costs, deficits attributable to both inter-city passenger service and suburban commuter service were included in cost computations. It is generally agreed that the intercity passenger deficits should be considered as a part of the cost of providing freight service, because such deficits are usually the product of costs allocated to passenger operations from common facilities which must be maintained in order to provide freight service.[14] Suburban (commuter) deficits are in a different category. The railroads, which on today's market carry large numbers of people from their homes in the suburbs to their place of work in the cities, often, if not preponderantly, use separately constructed and maintained lines. These suburban commuter operations require equipment and facilities that in many instances have no other use whatsoever. The reason stated by the Commission for the inclusion of commuter deficits is that "the suburban service deficit includes common costs" which must be incurred to provide freight service (325 I.C.C. at p. 78). But the Commission also found as a fact that "many individual items of suburban

13. For instances in which evidence of the Southern railroads was rejected for lack of "comparable" data for the North, see 325 I.C.C. at 69 (refrigerator car empty return ratios); 325 I.C.C. at 76; 325 I.C.C. at 60. The same result was reached due to an absence of "adequate" data at 325 I.C.C. at 66 (box car empty return ratios).

14. The necessity for maintaining common facilities for freight service was explained by the Supreme Court in King v. United States, 344 U.S. 254, 265 (1952):

> "In Florida, moreover, the discontinuance of railroad passenger service would not permit the discontinuance of high-speed tracks and equipment because of the need for fast freight schedules to transport perishable fruits and vegetables from Florida."

service can be considered solely related * * * to suburban service." (325 I.C.C. at p. 78). This latter finding seems to be a concession that many commuter facilities are solely related to that service and have nothing whatsoever to do with the cost of handling North-South traffic or any other freight traffic. The critical issue on this cost item was to determine how much of the railroad's cost of commuter service was in fact common with the cost of freight service and how much was solely related to commuter service. But, in accordance with its general approach to these issues, the Commission, by adopting Rail Form A, inflated the Northern railroads' freight cost by the entire commuter deficit of those railroads, without regard to the plain conflict between this action and its own finding that "many individual items of suburban service can be considered solely related * * * to suburban service." Counsel for defendants, during argument, repeatedly suggested that the commuter deficits are properly chargeable to the traffic at issue as an "overhead." They argued:

> "* * * there has been a definite theory upon which the Commission has allocated these costs as a matter of policy, and that is that there is a need for that revenue to continue operations."

The complete answer to this contention is that the Commission did no such thing. The revenue need issue was hotly contested before the Commission, each group contending that its needs were greater—the Northern railroads, on the basis of lower rates of return; the Southern railroads, on the basis of their growing service responsibilities to an expanding economy. The Commission rejected both contentions, and categorically stated:

> "We find that no affirmative reasons appear in this record which would warrant any adjustment of the divisions in question over and above the relative cost of service, either on the grounds of greater revenue needs or otherwise."

There is no finding rationalizing the conclusion that suburban passenger deficits reflecting costs not common to freight service, but "solely related" to suburban passenger service, can or should be treated as cost of North-South freight traffic.

The Supreme Court, on May 29, 1967, in the cases of *C. and N.W. Ry. Co. v. A.T. and S.F.R. Co.*, and *U.S. v. A.T. and S.F.R. Co.* (Nos. 8 and 23, October Term, 1966) commented on a possible divisions case, where, as here, it is argued that carriers in one part of the country are being required to subsidize passenger operations elsewhere. There, it was said:

> "And while the Commission has sometimes acted to offset passenger deficits in freight rate cases, the issues are quite different when, in a divisions case, it is argued that carriers in one part of the country should subsidize the passenger operations of carriers elsewhere.
>
> "If the Commission were to give controlling weight to passenger deficits in a divisions case, it might be appropriate to take more evidence on the issue and discuss it in greater depth than the Commission did here. But in light of the fact that, in this case, passenger deficits were of negligible relevance to the Commission's decision to increase the Midwestern divisions, we find no errors in the Commission's findings and procedure on this point that would justify setting aside its order."

Another example of the Commission's approach is characterized by its use of a territorial average box car empty return ratios. The nature of this problem is summarized in the dissenting opinion of Commissioner Murphy (325 I.C.C. 54, 55):

> "The higher than average empty return ratios used for cars moving over the official lines is another instance where true costs have not been used. The

official lines handle approximately 800,000 carloads of automobile parts annually which originate in the Detroit, Mich., area and are destined to assembly plants in various parts of the country, including New Jersey, California and Georgia. Many of these cars are fitted with special devices to protect the automobile parts in transit. Because these cars carrying parts contain special devices and are assigned to particular plants manufacturing such parts in official territory, they normally experience an empty return movement which is, for all practical purposes, 100 percent. No adjustment is made in the cost data to cover the higher empty return costs of this type of equipment. Territorial average box car empty return ratios, as used in the report, overstate the costs of the official railroads when applied to Official-Southern traffic."

Another example of the general approach of the Commission is illustrated in its treatment of the issue of "Switching costs" (325 I.C.C. 71-78). The specific cost factor was the amount of the switching service actually performed in originating and terminating the traffic at issue. The Northern railroads placed their entire reliance upon the territorial average switching service for the average car in each territory.[15] The Southern railroads sought to develop the costs associated with the specific traffic in issue. In the face of these special studies, the Northern railroads continued to rely upon Rail Form A switching costs, which were substantially higher in the North. In its cost findings on this point, we repeat the Commission's finding at 325 I.C.C. 77:

"* * * the contentions of the Northern lines are of merit and that Rail Form A territorial average switching costs more accurately measure the relative switch-

15. The North-South traffic constitutes only 4.07% of the total cars originated and terminated in the North and 8.93% of the total cars originated and terminated in the South.

ing costs on each side of the border of the Official-Southern traffic than the switching costs computed by the Southern lines."

Although important as separate issues, the three items heretofore detailed are of greater significance as illustrations of the more pervasive error of the Commission in prescribing divisions on the basis of the average cost of all traffic for this series of important elements of cost which are higher in the North for reasons that have not been shown to have any relation to the North-South freight traffic here at issue. We are not suggesting that one might not dig out of the record argumentative support for the Commission's view, but it is not conducive to a fair administration of the Commerce Act, nor is it a proper discharge of this Court's duty, to require us to dig out indications of evidence from this massive record.

Defendants argue that the question of whether or not Rail Form A was representative, and whether it should have been supplemented are questions of fact, the determination of which is within the competence of the Commission. We start, of course, from the premise that on the subject of transport economics, the Commission's judgment is entitled to great weight. The appraisal of cost figures is itself a task for experts and, unlike a problem in mathematics, it cannot be precisely right or wrong. We know, too, that the Rail Form A cost formula was devised for the express purpose of measuring territorial average costs and has been widely used as an acceptable means of comparing relative transportation costs. It represents a comprehensive study entitled to full weight when the issue is one that it was designed to cover. However, this formula was designed to measure the cost of handling all the traffic in two or more territories, and cannot appropriately be accepted without further evidence for mechanical application to particular segments of traffic in a divisions case. The "many minute calculations" contained in

Rail Form A were used to measure the overall average costs and certainly produce a misleading appearance of exactitude when applied mechanically to measure a specific cost of a specific body of traffic such as that involved here. Evidence of overall territorial averages surely can and should be considered, but as to specific important cost items the Commission should not wholly and exclusively rely on such averages. *United States v. Abilene and Southern R.R. Co.*, 265 U.S. 274; *Atchison, Topeka and Santa Fe Ry. Co. v. United States*, 225 F. Supp. 584. The Commission stated its exclusive standard to be the relevant cost of handling the specific freight traffic to which the divisions apply. We are persuaded that the order is not based on substantial evidence nor supported by reasoned findings within the meaning of Sections 8(b) and 10(e) of the Administrative Procedure Act because the use of territorial averages accounting for the Northern inflation has not been supported with findings of evidence relating any such inflation to the North-South freight traffic.

What is appropriate in one case may be inappropriate in another. We do not hold that the Commission was required to start from scratch and construct a new divisional scale directly from cost data. We do find that, having stated its exclusive standard to be the relevant cost of handling the freight traffic to which the divisions apply, the Commission's order is not based on substantial evidence within the meaning of the Administrative Procedure Act. We note that in the Chicago and N.W. R. Co. case (supra, Supreme Court of the United States, May 29, 1967), disputes over the applicability of Rail Form A occupied a large part of the administrative proceedings. There, the Commission based its cost findings on a special cost study and analysis prepared by the Mountain-Pacific carriers and made certain adjustments which it considered more accurately reflected the true costs of the traffic involved. These adjustments (3) were derived from Rail

Form A. The Supreme Court held that the attack on the legal validity of these adjustments to costs were unsubstantial. Here, of course, the entire inflation is pegged on relative costs derived from Rail Form A.

With the Commission's expertise in mind, it is our duty to review the record and the conclusions reached, as required by the provisions of the Administrative Procedure Act. As to the sufficiency of the evidence to support the order, it is not the proper function of this Court to substitute its judgment or to weigh evidence.[16] On the other hand, it is our duty to ascertain whether or not the findings and conclusions are supported by substantial evidence. We have endeavored to review the record without a rubber stamp approach. We repeat and reiterate that in making our decision we are not unmindful of the function that the Interstate Commerce Commission is to perform and the discretion that it has. The Commission has had a hard and difficult task here. The record reveals that this facet of this case began in 1956 and that the report and order of the Commission was not issued until February 3, 1965. This in itself certainly suggests the magnitude of the problem which faced the Commission.

"Expert discretion is the lifeblood of the administrative process, but 'unless we make the requirements for administrative action strict and demanding, *expertise*, the strength of modern government, can become a monster which rules with no practical limits on its discretion.' "[17] In 1953, in recognition of its previous action in prescribing

16. Illinois Commerce Comm. v. United States, 292 U.S. 474, 484, 54 S. Ct. 783, 78 L. Ed. 1371 (1933); Boston and Maine R.R. v. United States, 153 F. Supp. 952 (D. C. Mass., 1957); see Nashua Motor Exp., Inc. v. United States, 230 F. Supp. 646 (D.C. N.H. 1964); J. B. Acton, Inc. v. United States, 221 F. Supp. 174 (W.D. Mo. 1963), aff'd, 376 U. S. 779, 84 S. Ct. 1133, 12 L. Ed. 2d 83 (1963).

17. Burlington Truck Lines v. United States, 371 U.S. 156, 167, 83 S. Ct. 239, 245, 9 L. Ed. 2d 207 (1962).

a uniform rate level, the Commission prescribed divisions on a uniform basis with no inflation for either Northern or Southern railroads and concluded that (287 I.C.C. at 526):

> "* * * We consider it to be the safest assumption for the future upon the facts before us that neither contesting group will have an appreciably lower basis of operating costs than the other, and that there are no other relevant circumstances which are of sufficient importance to justify higher divisional factors for one group than the other."

Furthermore, for many years prior to this case the Commission has consistently followed the view that the primary responsibility for meeting the cost and revenue needs of the railroads of any territory lies with the people and the industry of that territory. *New England Divisions,* 126 I.C.C. 579, 599 (1927); *Divisions of Rates, Official and Southern Territories,* 234 I.C.C. 175, 190 (1939); *Official-Southern Divisions,* 287 I.C.C. 497, 523 (1953); *Akron, Canton & Youngstown R. Co. v. Atchison, T. & S.F. Ry. Co.,* 321 I.C.C. 17, 51 (1963). In this very case, prior to re-opening, the Commission held that the primary division of revenues accruing from this traffic were to be made on an equal-factor scale. We recognize that the Commission is not perpetually bound by their 1953 holding, but we do believe that the Commission has special responsibilities in a case of this magnitude when it departs from its prior finding (*Sec'y of Agriculture v. United States,* 347 U.S. 645). The Commission's duty to use its powers to obtain cost evidence where such evidence is necessary to assure an adequate record was stressed in *Pacific Inland Tariff Bureau v. United States,* 129 F. Supp. 472, 486 (D.C. Ore., 1955):

> "The Commission is not a passive arbitrator of disputes between carriers. It is the instrument chosen

by Congress to regulate interstate commerce in the public interest. When carriers fail to produce satisfactory evidence, the Commission may require them to produce additional and more satisfactory evidence. It may make its own investigation. It may consult with 'other interested and presumably better informed agencies of the Government as to particular question.' *Cantlay and Tanzola, Inc. v. United States,* 115 F. Supp. 81. However, the record does not disclose that any of those courses was followed in this case. *The fate of our national transportation system should not depend upon evidence either offered or withheld by competing carriers.*" (Emphasis added.)

The same principle was reiterated recently by the Second Circuit in *Scenic Hudson Preservation Conference v. Federal Power Commission,* 354 F. 2d 608 (2nd Cir. 1965). There, the Court set aside an order of the Federal Power Commission, saying (354 F. 2d at 620):

"In this case, as in many others, the Commission has claimed to be the representative of the public interest. This role does not permit it to act as an umpire blandly calling balls and strikes for adversaries appearing before it; the right of the public must receive active and affirmative protection at the hands of the Commission.

"This court cannot and should not attempt to substitute its judgment for that of the Commission. But we must decide whether the Commission has correctly discharged its duties, including the proper fulfillment of its planning function in deciding that the 'licensing of the project would be in the overall public interest.' The Commission must see to it that the record is complete. The Commission has an affirmative duty to inquire into and consider all relevant facts. See *Michigan Consolidated Gas Co. v. Federal Power Comm'n* 283 F. 2d 204, 224, 226 (D. C. Cir.), cert.

denied, 364 U.S. 913 (1960); *Isbrandtsen Co. v. United States,* 96 F. Supp. 883, 892 (S.D. N.Y. 1951), aff'd by an equally divided court, 342 U.S. 950 (1952); Friendly, *The Federal Administrative Agencies,* 144 (1962); Landis, *The Administrative Process,* 36-46 (1938); cf. *City of Pittsburgh v. Federal Power Comm'n,* 237 F.2d 741 (D.C. Cir., 1956)."

There is no doubt as to the Commission's statutory powers to require the development of adequate and comparable cost data. Section 12(1) of the Interstate Commerce Act authorizes the Commission to "obtain from such carriers and persons such information as the Commission deems necessary to carry out the provisions of [the Act]" (49 U.S.C. § 12(1)). Section 20(1) of the Act expressly grants the Commission the power "to require * * * special reports from carriers" and to require the carriers to provide "full, true and correct answers to all questions upon which the Commission may deem information to be necessary" (49 U.S.C. § 20(1)). This power was sustained in *Baltimore & O.R. Co. v. ICC,* 221 U.S. 612, 621 (1911).

The Commission in this case never mentioned or, for all that appears, even considered the possibility of developing a record on the specific cost at issue, but merely relied upon unadjusted territorial average costs to reflect the average cost of the traffic at issue. The Commission is not expected to merely call balls and strikes. The ICC is not the prisoner of the parties' submissions. It is empowered to investigate and gather evidence beyond that presented where exercise of that power is necessary to supplement the record and is in the public interest. The record here does not show, except in nebulous fashion, that the cost figures represent anything but the overall average territorial costs and they certainly are not computations of cost figures of the particular movements here involved. The ICC has tools to assemble complete factual records, it employed virtually none of them in this extremely important pro-

ceeding. (See Justice Brennan's concurring opinion in the Railroad merger cases, 386 U.S. 372, decided March 27, 1967).

This opinion has been rather lengthy and includes findings and conclusions. By way of repetition and emphasis we add the following specific conclusions:

Conclusions of Law

1. This Court has jurisdiction, under 5 U.S.C. § 1009 and 28 U.S.C. §§ 1336, 2284, 2321-2325, to suspend, enjoin, annul and set aside the enforcement, operation and execution of orders of the Interstate Commerce Commission.

2. The venue of this action is properly laid in the Eastern District of Louisiana under 28 U.S.C. § 1398.

3. The Commission has power to require the development of adequate and comparable cost data. Section 20(1) of the Act expressly grants the Commission the power "to require the carriers to provide full, true and correct answers to all questions upon which the Commission may deem information to be necessary" (49 U.S.C. § 20(1)). The Commission has a duty to use its powers to obtain cost evidence where such evidence is necessary to assure an adequate record. That duty was violated here as the Commission failed to take affirmative action to require the development of an adequate record as to the actual costs of handling the specific traffic at issue.

4. The Commission stated as its standard the costs of handling North-South freight traffic, but reliance upon territorial average costs caused it to include in the Northern costs deficits from suburban commuter passenger service operations. This action constitutes a violation of both Sections 8(b) and 10(e) of the Administrative Procedure Act when judged against the standard stated by the Commission itself as governing in this case—that is, the relative costs of handling North-South freight traffic. The Commission had before it no substantial evidence on which

such a conclusion might be based. The lack of rational basis for the Commission's conclusion is highlighted by the Commission's own inconsistent finding that "many individual items of suburban service can be considered solely related * * * to suburban service" (325 I.C.C. at 78).

5. The Commission's use of territorial averages in computing the "switching costs" of the Northern and Southern railroads rather than the specific costs incurred by those railroads with respect to North-South traffic is not supported by reasoned findings and not based on substantial evidence in the record and thus violates Sections 8(b) and 10(e) of the Administrative Procedure Act.

6. The Commission's use of territorial average "empty return ratios" rather than the actual empty return ratios for the North-South traffic in issue also violates Section 8(b) and 10(e) of the Administrative Procedure Act because it is unsupported by reasoned findings and not based on substantial evidence in the record.

7. The "typical evidence rule" requires that there must be evidence typical in character and ample in quantity with respect to the divisions and services performed under the particular rate being divided. The Commission must consider evidence of actual services performed on particular traffic involved, and not rely wholly on averages which "are apt to be misleading." Here, the Commission relied on "unsifted averages." *United States v. Abilene & Southern Railroad Co.*, 265 U.S. 274 (1924), at p. 291; *Atchison, Topeka & Santa Fe R. Co. v. United States*, 225 F. Supp. 584, 592-600 (D. Colo. 1964).

Conclusion

We are not unmindful of the complicated nature of this problem. However, when the outcome of factual issues is bound to cut deeply into economic relations on such a scale and when the result involves a departure from an equal division formula previously adopted, it is appropriate to

remand the case to the ICC for further study, followed by an explicit development of a record to assure adequate and comparable evidence with respect to the cost of the specific traffic at issue.

With the passage of each year, the 1959 test year adopted here becomes more and more vulnerable to the charge of staleness. It therefore has less and less to recommend it as a reliable basis upon which to predicate a division order. We make this observation not to indicate that it would necessarily be an abuse of discretion for the Commission not to re-open the investigation to receive later operating figures, but as a suggestion that such a re-opening well might be warranted.

The Commission Order, in its entirety, should be set aside and the cause remanded to the Commission for further proceedings consistent with the views expressed herein.

Counsel for plaintiffs will prepare and submit an appropriate decree in conformity with this opinion.

Stipulation Covering Record on Appeal.

WHEREAS, by letter of August 28, 1967, Richard B. Montgomery, Jr., Esq., as attorney for intervening defendants, The Baltimore and Ohio Railroad Company et al., informed Honorable A. Dallam O'Brien, Clerk of this Court, of their intention to file with him early in October 1967, after the Rules of the Supreme Court adopted June 12, 1967, become effective October 2, 1967, their notice of appeal to the Supreme Court of the United States from the final decree of this Court herein, dated August 8, 1967, and entered August 22, 1967; and, in accordance with Rule 12 of said Rules, requested him, on behalf of said intervening defendants, to certify the entire record in this cause and to provide for its transmission to the Clerk of the Supreme Court of the United States; and to include with and as a part of said record the briefs, joint appendix, and reporter's transcript described in items 1 to 13, inclusive, of Section A of said letter (copy of which is attached);

AND WHEREAS, all the parties consent to the inclusion of the above-described materials with the certified record, and none of the parties desire to have any additional materials so included:

IT IS HEREBY STIPULATED by the parties to the above-entitled cause: (1) that all the materials requested by intervening defendants for inclusion in the record on appeal be

included by the Clerk with and as a part of the certified record on appeal; and (2) that the Court is hereby requested to make such order as it may deem necessary or appropriate to enable and permit the Clerk to include with the certified record on appeal all additional materials hereinabove referred to or described.

Attachment—Letter Request of Attorney for Intervening Defendants on Clerk of District Court Concerning Record to be Certified on Appeal.

August 28, 1967

Honorable A. Dallam O'Brien
Clerk
United States District Court
Eastern District of Louisiana
400 Royal Street
New Orleans 70130

Re: Aberdeen & Rockfish RR Co., et al.
v. United States, et al.—Civil No. 15454

Dear Sir:

This will advise that The Baltimore and Ohio Railroad Company et al., the Intervening Defendants in the above-entitled cause, expect to file with you, early in October, after the new Supreme Court Rules become effective, their Notice of Appeal to the Supreme Court of the United States from the Final Decree of this Court herein, dated August 8, 1967, and entered August 22, 1967.

In accordance with new Rule 12 this will request, on behalf of said Intervening Defendants, that you please certify the entire record in this cause and provide for its transmission to the Clerk of the Supreme Court of the United States; said record to include among other things the following materials:

A. The documents described below, filed with this Court or relating to its proceedings, an extra copy of each of which Intervening Defendants will undertake to furnish you promptly for your convenience in making up the record:

1. Brief for Plaintiff Southern Railroads. (Dated May 15, 1966)

2. Brief for Intervening Plaintiffs. (Dated May 15, 1966)

3. Joint Brief for the United States of America and the Interstate Commerce Commission. (August 1966)

4. Brief for Intervening Defendant Railroads. (Dated August 1, 1966)

5. Reply Brief for Plaintiff Southern Railroads. (Dated September 1, 1966)

6. Reply Brief for Intervening Plaintiffs. Dated September 1, 1966)

7. Joint Appendix, Volume I. October 15, 1966)

8. Joint Appendix, Volume II. (October 15, 1966)

9. Reporter's Transcript of Hearing and Arguments before the Three Judge Court at New Orleans, La., on Monday, December 12, 1966.

10. Supplemental Brief for Plaintiffs and Intervening Plaintiffs. (Dated January 11, 1967)

11. Supplemental Brief for Defendants and Intervening Defendants. (Dated January 11, 1967)

12. Supplemental Reply Brief for Plaintiffs and Intervening Plaintiffs. (Dated January 20, 1967)

13. Supplemental Reply Brief of Defendants and Intervening Defendants. (Dated January 31, 1967)

B. The entire certified copy of the Record before the Interstate Commerce Commission in its Docket No. 29885, *Official-Southern Divisions,* and Docket No. 29799, *Akron, Canton & Youngstown Railroad Company et al. v. Aberdeen & Rockfish Railroad Company, et al.,* covered by the 22 certificates of the Secretary of the Interstate Commerce Commission (17 certificates dated May 28, 1965, 4 certificates dated August 2, 1965, and one certificate dated May 9, 1966) and admitted into evidence as Plaintiff's Exhibit No. 1 (Tr. 6) at the hearing before the Court on December 12, 1966; including among other things the Briefs of the parties,

Report of the Examiners upon Further Hearing, Exceptions of the parties thereto, Replies of the parties to Exceptions, the Transcript of Argument before the Interstate Commerce Commission, and the Reports and Orders of the Commission of February 3, 1965, and May 18, 1965, all as specified in said certificate of the Secretary of the Interstate Commerce Commission.

Copies of this request are today being sent to counsel for all parties to this proceeding as noted below.

Sincerely,

Richard B. Montgomery, Jr.
Attorney for Intervening
Defendants

Notice of Appeal of the Baltimore and Ohio Railroad Company et al., Intervening Defendants, to the Supreme Court of the United States.

I.

Notice is hereby given that The Baltimore and Ohio Railroad Company and the other Intervening Defendants named in the list attached hereto and marked "A" appeal to the Supreme Court of the United States from the Final Decree of this Court dated August 8, 1967, and entered August 22, 1967, setting aside the Order of the Interstate Commerce Commission dated February 3, 1965, as supplemented by the third ordering paragraph of the Order of that Commission dated May 18, 1965 (each as entered by the Commission in the cause under its Docket No. 29885, Official-Southern Divisions and Docket No. 29799, *Akron, Canton & Youngstown R. Co. et al. v. Aberdeen & Rockfish R. Co. et al.*) and remanding said cause to the Commission for further proceedings.

This appeal is taken pursuant to 28 U. S. C. §§ 1253, 2101(b).

II.

In accordance with the provisions of Rule 12 of the Rules of the Supreme Court effective October 2, 1967, these Intervening Defendants, by letter addressed to the Clerk of this Court under date of August 28, 1967, copies of which were then sent to all parties to the proceeding, informed

him of the intention of Intervening Defendants to file this Notice of Appeal with him early in October, 1967, and requested said Clerk to certify the record and provide for its transmission to the Clerk of the Supreme Court of the United States.

(Subscription of Counsel for Intervening Defendants, omitted in printing.) Dated and filed October 2, 1967; List "A" of Appellants (omitted in printing); Proof of Service (omitted in printing).

Motion.

Now come The Baltimore and Ohio Railroad Company et al., intervening defendants in the above numbered and entitled cause, and upon suggesting to the Court that on the 3rd day of October, 1967, intervening defendants filed their notice of appeal to the Supreme Court of the United States and that intervening defendants have requested the Clerk of Court to certify to the Supreme Court the entire record in this cause, including with and as a part of said record the briefs of the parties filed herein, joint appendix and the reporter's transcript of the proceedings heard in open court at New Orleans, Louisiana, on Monday, December 12, 1966, described in Items 1 to 13, inclusive, of Section A of intervening defendants' letter to the Honorable Clerk dated August 28, 1957, and upon further suggesting that all parties to this cause have consented to the inclusion of the above described materials in the certified record, pursuant to the stipulation filed September 15, 1967, and that intervening defendants desire that this Honorable Court grant an order permitting the inclusion in the certified record of the briefs, joint appendix and reporter's transcript.

WHEREFORE, intervening defendants respectfully move the Court for an order permitting the inclusion in the certified record of the briefs of the parties, joint appendix and reporter's transcript of the proceedings heard in open court as described above.

(Title omitted in printing.)

Order of Circuit Judge John Minor Wisdom Concerning Record on Appeal.

Considering the motion filed herein by The Baltimore & Ohio Railroad Company, et al., intervening defendants, to include certain materials in the certified record on appeal to the Supreme Court of the United States,

IT IS ORDERED that the Clerk of this Court be and he is hereby directed to include in the certified record on appeal to the Supreme Court of the United States in the captioned cause the briefs of the parties, joint appendix and the reporter's transcript of the proceedings heard in open court at New Orleans, Louisiana, on December 12, 1966.

New Orleans, Louisiana, October 4, 1967.

/s/ JOHN MINOR WISDOM
United States Circuit Judge.

IN THE
UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF LOUISIANA
NEW ORLEANS DIVISION

(Title omitted in printing.)

Notice of Appeal of United States of America and Interstate Commerce Commission to the Supreme Court of the United States.

I.

Notice is hereby given that the United States of America and the Interstate Commerce Commission, defendants in the above-entitled action, appeal to the Supreme Court of the United States from the final judgment of this Court entered August 22, 1967. This appeal is taken pursuant to 28 U.S.C. §§ 1253 and 2101(b).

II.

In accordance with the provisions of Rule 12 of the Rules of the Supreme Court of the United States, effective October 2, 1967, these appellants hereby adopt and incorporate into this Notice of Appeal the designation of record contained in the letter of August 28, 1967, addressed to the Clerk of this Court by the intervening defendants, The Baltimore & Ohio Railroad Company, et al., but request the Clerk to include in said transcript to be transmitted to the Clerk of the Supreme Court of the United States, as an additional document, this Notice of Appeal.

No. 29885.

OFFICIAL-SOUTHERN DIVISIONS.

In The Matter of Divisions of Joint Rates Between Official and Southern Territories.

No. 29799.

The Akron, Canton & Youngstown Railroad Company, et al.

v.

Aberdeen and Rockfish Railroad Company, et al.

PETITION OF EASTERN RAILROADS FOR LEAVE TO FILE PETITION FOR GENERAL REOPENING FOR FURTHER HEARING AND FOR MODIFICATION OF ORDER.

Come now the Eastern Railroads respondents in No. 29885 and complainants in No. 29799, herein termed petitioners, and petition the Commission for leave to file the attached petition for a general reopening of these proceedings for further hearing and for modification of the order therein of January 12, 1953, as amended by order of May 26, 1953, and, in support of this petition for leave to file, respectfully state:

I.

By its report and order herein of January 12, 1953 (*Official-Southern Divisions*, 287 I.C.C. 497), as amended by its report and order of May 26, 1953 (*Official-Southern Divisions*, 289 I.C.C. 4) the Commission prescribed divisions

of joint rates (other than those on coal and coke) between Official and Southern territories, which divisions became effective July 15, 1953. In so far as the original order in No. 29885 related to divisions of rates to and from points on the lines of the Norfolk Southern Railway Company, Atlantic and East Carolina Railway Company, and Beaufort and Morehead Railroad Company (A. T. Leary, Lessee) the amendatory order of May 26, 1953, postponed its effective date until the further order of the Commission and assigned the case for further hearing at a time and place to be fixed. By its Second Supplemental Report and accompanying order of November 2, 1953 (*Official-Southern Divisions,* 291 I.C.C. 90) the Commission made The Atlantic and Danville Railway Company a respondent in No. 29885 and assigned the proceeding for further hearing at a time and place to be determined. At the instance of the parties these further hearings have been deferred until now.

II.

As more fully explained in the attached petition for further hearing and for modification of order, the Commission, in prescribing the present "equal-factor" basis of divisions as between the Eastern and Southern railroads, declined to fix for Eastern lines the higher basis of divisions which the relative cost of service then before it would have warranted, on the ground that "for the future * * * neither contesting group [Eastern or Southern] will have an appreciably lower basis of operating costs than the other" (287 I.C.C. 497, 526). Subsequent experience, however, has not sustained this conclusion. On the contrary, the results of later years disclose that the service costs of Eastern roads exceed those of the Southern roads in even greater measure than shown by the figures then before the Commission. These facts, together with other facts, circumstances, and conditions relating to the current situation which are appropriate for Commission consideration in fixing divisions of the joint rates involved, and which petitioners will de-

velop of record if the general reopening here sought is granted, warrant the prescription of increased divisions for petitioners.

III.

As it appears from its original decision herein, (*Official-Southern Divisions,* 287 I.C.C. 497, 539) the Commission, in fixing petitioners' divisions of rates on fresh fruits and vegetables, specifically took into account, as an offset to costs, the revenue received by petitioners from the unloading charges at New York and Philadelphia it had approved in I. & S. 5500, *Unloading Charges, fruits and vegetables, N. Y. and Phila.,* 272 I.C.C. 648; 286 I.C.C. 119. This was again recognized by the Commission in its report of June 28, 1956, on further hearing and reconsideration in the latter proceeding, — I.C.C. — (mimeographed), where at sheet 7 it stated:

> "In *Official-Southern Divisions,* 287 I.C.C. 497, 538-543, and in *Official-Southwestern Divisions,* 287 I.C.C. 553, 584-592, we considered evidence of terminal costs of terminating perishable traffic in official territory, including fresh fruits and vegetables, presented by the eastern railroads in prescribing the divisions of the rates there in issue. Those costs, which included the costs of unloading cars at New York, and Philadelphia, were reduced by the amounts of these unloading charges then being collected from the shippers. Such costs were treated as items of terminal expense, except to the extent that they were offset by such unloading charges."

By this report of June 28, 1956, and accompanying order as extended, the Commission nevertheless required respondents to cancel the unloading charges effective October 17, 1956, under circumstances clearly indicating that reimbursement of their revenue loss might be sought from increased divisions (See sheets 35-36).

IV.

For these and other reasons which petitioners will develop of record if further hearing is granted as herein prayed, the divisions which the Commission prescribed in *Official-Southern Divisions,* 287 I.C.C. 497; 289 I.C.C. 4, and which are now in effect, do not conform to the statutory standards but, as to Eastern railroads petitioners, are unjust, unreasonable, inequitable, and unduly prejudicial in violation of Section 1(4) and Section 15(6) of the Act. In this connection petitioners respectfully request that the facts and reasons set forth in the annexed petition for a general reopening of these cases for further hearing and for modification of order be considered as if here incorporated in full.

V.

Accordingly, petitioners seek a general reopening of these cases for further hearing to bring the records up to date and to present to the Commission further facts—not available to petitioners for introduction before the close of the hearings herein on December 8, 1950, or thereafter under the stipulation of that date—which show that petitioners are now entitled to increased divisions out of the joint rates within the scope of these proceedings.

WHEREFORE, Petitioners respectfully ask leave to file the attached petition for a general reopening of these cases for further hearing and for modification of order, and for such other and further relief as the Commission may deem appropriate in the premises.

Respectfully submitted,

(Subscriptions and Certificate of Service Omitted in printing.)

November 1, 1956

Before the

Interstate Commerce Commission

(Title omitted in printing.)

PETITION OF EASTERN RAILROADS FOR GENERAL REOPENING FOR FURTHER HEARING AND MODIFICATION OF ORDER.

Come now the Eastern railroads, respondents in Nos. 29885 and complainants in No. 29799, and with leave of the Commission, file this their petition for a general reopening of these cases for further hearing and for modification of the order entered by the Commission in these proceedings on January 12, 1953, in connection with its report of the same date in *Official-Southern Divisions,* 287 I.C.C. 497, as amended by its order entered on May 26, 1953, in connection with its report on reargument in said cases, *Official-Southern Divisions,* 289 I.C.C. 4; and in support of this petition respectfully state:

I.

No. 29885 is an investigation into the divisions of joint rates on classes and all commodities between Official and Southern territories, instituted by the Commission's order of December 4, 1947, in response to a petition of Eastern Railroads dated July 16, 1947, seeking further hearing and modification of order in No. 24160, *Divisions of Rates, Official and Southern Territories,* 234 I.C.C. 175 (1939). No. 29799 is a proceeding begun by the complaint of Eastern railroads, also dated July 16, 1947, and filed with said petition, in which they sought increased divisions of joint rates on Florida citrus fruit to points in Official territory.

II.

In view of the Commission's recognition of the vital importance of relative costs of service as the primary and even paramount factor for consideration in fixing the divisions of joint rates,* Eastern lines included in their evidence a full showing of relative service costs.†

The initial cost presentation of Eastern lines in these proceedings was based chiefly upon data for the *year 1946* as adjusted to January 1, 1948. Subsequently, when the requisite data became available, they computed similar costs for the *year 1948* (287 I.C.C. 507).

While the record before the Commission, when it made its decisions of 1953 herein, included some statistical data for 1951, which was received pursuant to a stipulation providing for its receipt for a limited period after the close of the hearing on December 8, 1950 (Tr. C-2119-20), the latest Form A costs before it were those for the year 1948, as the stipulation did not cover later cost data.

Taking for illustration the 1948 Form A freight service costs for transportation of a 26-ton load in box car equipment for a short line distance of 350 miles,‡ Eastern lines' evidence which was before the Commission showed the following cost relationships:

---

* *New England Divisions,* 66 I.C.C. 196, 198; *Divisions of Freight Rates,* 156 I.C.C. 94, 100-101; 203 I.C.C. 299, 335; *Southwestern-Official Divisions,* 234 I.C.C. 135, 148; *Official-Western Trunk Line Divisions,* 269 I.C.C. 765, 776.

† Eastern lines' costs were based on the formula known as Rail Form A, employed by the Commission's Cost Section in I.C.C. Docket No. 28300, *Class Rate Investigation, 1939,* 262 I.C.C. 447, 571, and reflected in the "Rail Carload Cost Scales by Territories", issued from time to time by the Commission's Bureau of Accounts and Cost Finding. See, for example, Statements Nos. 3-49, 2-50, 1-51, 2-52, 4-53, 2-54, 2-55 and 5-56. Since in the handling of joint traffic each group of carriers performs only a single origin or destination terminal service, Eastern lines' cost comparisons were computed accordingly.

‡ On general traffic the study of Eastern lines developed average short-line, ton-mile hauls of 349.2 miles north and 472.3 miles South (Ex. 5-2).

FREIGHT SERVICE COST RATIOS AT 350 MILES—1948
For 26-Ton Load in Box Car

Southern Region	Eastern District Incl. Pocahontas	Eastern District
100	110	116

The Eastern lines proposed, and asked the Commission to fix, divisions as between the two groups of carriers based on divisional prorating factors for themselves which would be 110 percent of the corresponding factors fixed for the Southern carriers for hauls of like distance.†

In fixing divisional factors for the two carrier groups on the same equal-factor basis, the Commission did not accept at face value the Eastern lines' showing of their relatively higher costs. This directly appears from its statement in *Official-Southern Divisions*, 287 I.C.C. 497, at page 526:

> "If we were to give controlling weight to the cost studies of the northern lines for 1946 and 1948 in this record, the differentially higher basis of divisional factors sought by those lines would be justified. We do not accept that showing at face value because, admittedly, there were certain important items of expense in those years which may reasonably be regarded as transient, particularly in the northern lines' accounts for maintenance of way and structures and equipment. This was particularly true of the Pennsylvania, which in 1948 and the two following years had high freight-car repair costs apparently cyclic in nature. We consider it to be the safest assumption for the future upon

† Due to the specially heavy burden of terminal costs borne by Eastern lines on fresh fruit and vegetable traffic, which moves on relatively low rates, Eastern lines proposed factors for themselves on this traffic to certain primary market cities which were 125 percent of those for Southern lines, but the Commission fixed a single equal-factor basis for all such traffic. 287 I.C.C. 497.

the facts before us that neither contesting group will have an appreciably lower basis of operating costs than the other, and that there are no other relevant circumstances which are of sufficient importance to justify higher divisional factors for one group than the other."

As indicated in the foregoing quotation, the Commission prescribed the present divisions of the rates involved in these cases on the assumption and under the belief that "for the future * * * neither contesting group will have an appreciably lower basis of operating costs than the other, * * *."

Contrary to the Commission's conclusion in this respect, the facts now available disclose that Eastern lines' costs have not declined to the level of those of the Southern railroads. Instead, the costs of the Eastern lines have risen in relation to those of the Southern lines, so that there is now a greater disparity in such costs than shown in the record for 1948. This is illustrated by the following freight service cost ratios in which comparison with Southern Region costs is made of those for the Eastern District, which are more typical of petitioners' costs covering the traffic involved than those including costs for the Pocahontas Region.

FREIGHT SERVICE COST RATIOS AT 350 MILES
For 26-Ton Load in Box Car

Year	Southern Region	Eastern District
1946	100	111
1948	100	116
1950	100	126
1952	100	125
1954	100	129

The costs reflected in the foregoing comparisons are carload freight costs with 6 percent return on depreciated

investment, as computed under the Form A formula by your petitioners. If comparison is made with the corresponding Form A costs results disclosed by the statements issued by the Commission's Cost Section *—which include passenger and less-carload deficiencies and include a four percent return on I.C.C. valuation figures—it will be found that they confirm the increasingly higher service costs in the East.

FULLY DISTRIBUTED COST RATIOS AT 350 MILES
For 26-Ton Load in Box Car

Year	Southern Region	Eastern District
1947 as of 1/1/49	100	111
1948 as of 1/1/50	100	113
1949 as of 1/1/51	100	110
1950 as of 1/1/52	100	124
1951 as of 1/1/53	100	124
1952 as of 1/1/54	100	125
1953 as of 1/1/55	100	125
1954 as of 1/1/56	100	128

The foregoing comparisons relate to an assumed inter-territorial movement of a shipment handled 350 short-line miles by each territorial group of roads. The following tabulation compares the Eastern percentage of the total revenue under the prescribed divisions for the average hauls in each territory on the general traffic involved, with the Eastern proportions of the total costs for such average hauls as computed by petitioners for the Southern Region and Eastern District for the several years shown. As will be noted, Eastern lines' proportion of revenues under the prescribed divisions is substantially below their proportions of the total service costs.

* Statements Nos. 3-49, 2-50, 1-51, 2-52, 4-53, 2-54, 2-55 and 5-56.

PERCENTAGES OF REVENUE EAST ON OFFICIAL-SOUTHERN GENERAL TRAFFIC UNDER PRESCRIBED DIVISIONS AND RELATIVE COST BASES.

Divisional Basis *	Eastern Percentage
Prescribed	45.1
Relative Cost By Years†	
1946	46
1948	47
1950	49
1952	50
1954	50

III.

In addition to evidence bearing on relative costs of service for periods subsequent to those for which such costs are of record, petitioners desire opportunity to present other evidence relating to the intervening and current situations which are appropriate for Commission consideration in fixing divisions and which, together with the evidence of relative service costs, fully warrant the prescription of increased divisions for petitioners out of the joint rates involved in these proceedings.

IV.

As stated more fully in paragraph I of the accompanying Petition for Leave to File, the Commission has already re-opened No. 29885 for further hearing with respect to the divisions of the joint interterritorial rates involved to or

* Prescribed divisional factors and relative costs applied to average short-line ton-mile distances on general traffic of 349.2 miles East and 472.3 miles South.

† Fully distributed freight service costs (excluding deficits) for 26-ton load in box cars increased 14% for circuity.

from points on the lines of the Norfolk Southern Railway Company, Atlantic and East Carolina Railway Company, Beaufort and Morhead Railroad Company (A. T. Leary, Lessee), and The Atlantic and Danville Railway Company, and further hearing with respect to such rates remains to be had.

V.

As more fully set forth in paragraph III of the accompanying Petition for Leave to File, the Commission on further hearing and reconsideration in I. & S. No. 5500, *Unloading Charges on Fruits and Vegetables at New York and Philadelphia* — I.C.C. — (June 28, 1956) ordered the cancellation of the unloading charges it had previously approved in that case, *Unloading Charges, Fruits and Vegetables, N. Y. and Phila.*, 272 I.C.C. 648; 286 I.C.C. 119. As shown by the Commission's report of January 12, 1953, in the instant proceeding (287 I.C.C. 497, 539), and at Sheet 7 of its report of June 28, 1956, in I. & S. No. 5500, petitioners' present divisions on fresh fruits and vegetables were prescribed on the assumption that such unloading charges would remain in effect. In requiring their cancellation, effective October 17, 1956, the Commission plainly indicated that petitioners may appropriately seek reimbursement through increased divisions. (See sheets 35-36.)

VI.

If further hearing is granted as herein prayed, petitioners will undertake to present to the Commission evidence which was not available to petitioners for introduction before the close of the hearings on December 8, 1950, or thereafter under the stipulation of that date (Tr. C-2119-20), and accordingly was not considered by the Commission in arriving at its decision herein of January 12, 1953, as amended by its decision of May 26, 1953.

VII.

By reason of the foregoing facts and others that petitioners will undertake to prove to the Commission if these proceedings are reopened generally for further hearing as herein prayed, the present divisions, which are those prescribed by the Commission in its said decision of January 12, 1953, as amended by its decision of May 26, 1953, are now and for the future will be unjust, unreasonable, inequitable, and unduly prejudicial as to petitioners contrary to the requirements of Section 1(4) and Section 15(6) of the Act.

WHEREFORE, petitioners respectfully pray that the Commission reopen these proceedings generally for further hearing, that thereafter upon due consideration it prescribe such increased divisions for petitioners as it shall find just, reasonable, and equitable and modify its orders herein accordingly, and that it grant petitioners such other and further relief as it may deem appropriate in the premises.

Respectfully submitted,

(Subscriptions omitted in printing.)

November 1, 1956

Before the

Interstate Commerce Commission

(Title omitted in printing.)

REPLY OF SOUTHERN RAILROADS TO PETITION OF EASTERN RAILROADS FOR GENERAL REOPENING FOR FURTHER HEARING AND FOR MODIFICATION OF ORDER.

Come now the Southern Railroads, respondents in Docket No. 29885, and defendants in Docket No. 29799, and for their reply to the Petition of the Eastern (Northern) Railroads dated November 1, 1956, as amended, for general reopening for further hearing and for modification of Order, respectfully state as follows:

PRELIMINARY STATEMENT.

These cases concern the divisions which were prescribed by the Commission in *Official-Southern Divisions*, 287 I.C.C. 497, decided in 1953, and which became effective July 15, 1953. The Northern railroads, by their Petition, originally filed November 1, 1956 but not activated by them until April 1, 1959, are seeking to obtain an increase in the divisional factors so recently prescribed for them on an exhaustive record. For the reasons hereinafter set forth the Southern roads oppose the reopening of the proceeding, no basis having been shown justifying further investigation of the North-South Divisions at this time.

Under the Supreme Court's holding that "The Commission may not change an existing division unless it finds that division unjust or unreasonable" (*Beaumont S. L. & W. R. Co. v. United States*, 282 U. S. 74, 82), petitioners must make a strong and convincing showing in order to justify a general reopening of these cases which will inevitably result in expensive litigation. No such showing has been made in the Petition herein.

The decided cases are a complaint case and an investigation, instituted by the Commission in 1947 in lieu of reopening an earlier North-South Divisions proceeding which had been concluded in 1939 (287 I.C.C. 497, 498). These cases were pending before the Commission for more than five years before its first decision was rendered. Since then four supplemental reports have been issued, the last one being dated March 5, 1956. The decision has only been in effect for a period equivalent to the time it took the Commission to obtain an adequate record and to decide the case.

The extent of the exhaustive record on which the Commission based its order prescribing the present divisions was picturesquely described by the Northern roads' counsel (Tr. C-2440):

> "The record in the three cases before the Commission—not counting duplications—if piled in a column here before you would extend more than fifteen feet in the air."

The reference to "three cases" includes the parallel *Official-Southwestern Divisions* proceeding, 287 I.C.C. 553. Many of the hearings in the instant cases were conducted jointly with the *Official-Southwestern Divisions* case; many of the exhibits were introduced in all three proceedings while others were introduced in one case but not in another.

The instant *Official-Southern* cases and the parallel *Official-Southwestern* case were decided together, and identical divisional scales were prescribed in the related proceedings (compare the Official-Southern scales at 287 I.C.C. 497, 552, with the Official-Southwestern scales at 287 I.C.C. 553, 595). It is to be emphasized that, in both proceedings, the level of the Official, Southern and Southwestern divisional scales were geared to the uniform level of class rates prescribed in Docket No. 28300. (See 287 I.C.C. 497, 526 and 287 I.C.C. 553, 578.)

In light of this exhaustive record and the deliberate correlation of the prescribed divisions factors and the class

rate levels, reopening of the North-South Divisions at this time would require a most compelling showing. Moreover, reopening of the *Official-Southwestern* cases is not sought and any increase in the Northern lines' factors would destroy the existing divisional parity between the South and the Southwest on the one hand and the North on the other.

The Northern lines' request for reopening rests on a contention that their costs have advanced more than those of the Southern roads since the present divisions were prescribed. We shall show that there is no basis for this claim. Before dealing specifically with that contention, however, we shall point out the fundamental changes now in process which make it impossible fairly to appraise the respective positions of the two groups in the period ahead, either in absolute or relative terms.

Drastic corrective steps are being taken by the Northern roads, individually and through cooperative action, to reduce their excessive and duplicate facilities. But these very steps, which will effectively reduce costs in the future, presently operate to increase charges to operating expenses and thus, temporarily, not only obscure the true results, but seem to reverse their effect. (See *infra*, p. 9.)

Moreover, long needed legislation has just been enacted which effects significant changes in competitive rate making, grants important tax relief and enlarges the power of the Commission to deal with marginal or deficit operations. These changes in the legislative climate in Congress and in the states should especially benefit the Northern roads.

The combined effect of these and many other changes cannot now be measured, and yet they not only strongly affect, but undoubtedly govern, the territorial cost relationships.

In view of the events of the last ten years, it seems moderate to say that the Northern roads have devoted themselves to incessant efforts to obtain higher rates from the public and higher divisions from their connections. Human nature being what it is, the Commission will realize that

managements so preoccupied with such pursuits will never thoroughly exhaust the tremendous possibilities of self-help which are available to them. It would be a disservice to them and unfair to their connections to begin another round of North-South Divisions litigation and thereby divert their attention and energies from activities of internal improvement which provide the essential means for meeting the hard facts of life in the railroad business.

Turning to the specific allegations of their Petition for Reopening, review of the points urged by the Northern lines will demonstrate the utter inadequacy of their Petition herein.

I.

THE ALLEGED RELATIVELY GREATER INCREASE IN TRANSPORTATION COSTS IN THE EASTERN DISTRICT THAN IN THE SOUTHERN REGION DOES NOT JUSTIFY AN OPENING AND RETRIAL OF THE INSTANT CASE.

The contention of the Northern Railroads is that their costs have increased relatively more than the costs of the Southern Railroads, and that this fact in itself justifies an increase in their divisions. The argument is unsound.

The divisions prescribed by the Commission in these cases very substantially reduced the divisions and the revenue of the Southern roads. The effort to obtain an even larger transfer of revenue rests on the basic contention that "subsequent experience" has shown the Commission to have been in error in its finding that "for the future neither contesting group will have an appreciably lower basis of operating costs than the other." The charge is without merit.

The Commission was informed by an extensive record. It knew the conditions encountered by the two groups of roads in handling the identical traffic in the respective territories. It found nothing that could rationally explain or justify a permanently higher level of costs in the North

and found that deviations from such a relationship in a particular period must therefor reasonably be regarded as transient. The experience and the prospect in this dynamic epoch in the industry tend strongly to support rather than to impeach that conclusion.

Cost is a highly significant factor in the measure and determination of divisions, but it is the cost of performing the respective services covered by the joint rates that is important, not the cost of handling other traffic by a different group of roads. The cost relationship upon which the North relies in its Petition as having changed since the prior decision reflects: (1) territorial average costs for services of which, in the North, approximately 95% are provided for other freight traffic and 79% for intra-Official territory of freight traffic; (2) territorial average costs of a group of roads in the North which do not include the costs of the roads handling a third of the inter-changed traffic subject to the divisions at issue; and, (3) average costs based on annual report data for recent years which do not yet reveal, but actually distort, the effect of many changes now in progress.

1. The Rail Form A Costs Cited by the Northern Lines Reflect System Average Operations, Not the Costs of Handling the 5% of the Northern Lines Traffic Here at Issue.

The system average statistics of the Northern lines, including their Rail Form A costs, reflect predominantly intra-Official territory operations. Their passenger deficits, commuter and LCL problems are almost exclusively problems which must be met and solved within Official territory. And as to carload freight traffic, the Commission's 1% waybill statistics show that 79% of the Official territory traffic is intraterritorial, *i.e.*, 14,427,800 carloads of Official to Official traffic out of the 18,342,200 total carloads handled in Official territory. Carload Waybill Statistics, 1956, Statement TD-1.

Of the total freight revenue for Official territory, only about 5% is derived from divisions on the North-South traffic here in issue. In contrast, the system average Rail Form A cost data, the only cost data relied upon in the Northern lines' Petition, reflects territorial average traffic. Seventy-nine per cent of that traffic is intra-Official territory traffic, and 95% is other than the North-South traffic here at issue. In response to criticisms that Rail Form A costs, in the form cited by the Northern lines in their petition, were not applicable to the movement of a particular class of traffic, the Commission stated in Docket No. 28300 (262 I.C.C. 447, 588):

> "This is true. On the other hand, the intent of the cost study was to reflect territorial average operating conditions, including main-line and branch-line operations, through train and way train operations, operations of lines of heavy-traffic density and lines of light-traffic density, and the switching performed at large terminals and small terminals. It is obvious that some lines in virtue of their topography or traffic density will have costs which are lower or higher than the territorial average."

Since the issue sought to be again raised is the cost of the North-South traffic, not the average cost of all traffic, the Northern lines' Petition should be denied as based entirely on inadequate cost data.

2. The Cost Data Cited by the Northern Lines Are Deficient and Misleading Because They Omit the Cost of the Lines Which Handle Nearly One-Third of the Subject Traffic in the North.

The Rail Form A cost data set forth in the Northern lines' Petition is confined to costs of the lines assigned to Eastern District for statistical purposes. Such a grouping of roads omits many important lines which participate in the North-South traffic as Northern lines in important

measure, including the lines assigned to the Pocahontas Region for statistical reporting purposes.

The Pocahontas lines are parties to the joint through rates between Official and Southern territories, they participate in the transportation of traffic moving between the two territories under these rates, and the present divisions apply, and were prescribed to apply, on this traffic. *Official-Southern Divisions,* 287 I.C.C. 497, 498; 298 I.C.C. 83. Moreover, the divisions were determined in the light of conditions affecting the carriers in Official and Southern territories, the Pocahontas lines being included among those in the former territory. *Official-Southern Divisions,* 287 I.C.C. 497, 503, 510; *Division of Rates, Official and Southern Territories,* 234 I.C.C. 175, 201.

Nevertheless, the cost data for Eastern District omits, for example, the C&O, which is an important carrier of North-South traffic via Cincinnati and Lynchburg gateways as far into Official territory as Chicago, Buffalo and Traverse City, Michigan. Most significantly, the use of Eastern District costs omits the low costs of the Richmond, Fredericksburg and Potomac Railroad, the bulk of whose operation is as a Northern line hauling North-South traffic to and from the important Richmond gateway.

It is estimated that approximately 30% of the services performed by the Northern lines under the divisions here in issue are performed by lines other than those assigned to Eastern District. The Northern lines' Petition is wholly deficient and very misleading when based on cost data which excludes such important participation in the subject traffic.

3. The Cost Data Relied Upon by the Northern Lines Fails to Reflect or Is Obscured by the Important Activities of Self-Help Now Being Pursued Within Official Territory.

As previously shown, the Rail Form A cost data relied upon by the Northern lines reflect predominantly operations within Official territory. Under such circumstances, the Northern lines' Petition is inadequate in the absence of a

convincing showing that their opportunities for self-help within their own territory have been reasonably pursued and the results reflected in the accounts and statistics upon which the Petition is based. No such showing has been made, and the statements of the Northern lines prove instead that the important changes now in process within Official territory have not as yet been reflected in the system average cost statistics relied upon by the Northern lines.

Those roads have just begun to tap the opportunities for increased revenues and reduced costs available within Official territory. It is apparent from the statements of their managements that this is a period of profound change in that territory—a particularly inappropriate period for a general reopening and reappraisal of divisions recently prescribed by the Commission.

The following are illustrative examples of such areas of increased revenues and reduced costs.

A. Mechanized maintenance, modern yards and other technological advances.

The Commission emphasized in *Ex Parte 206,* the necessity for the railroads pursuing this means of cutting costs (300 I.C.C. 633, 685), and the Northern lines are now in the process of obtaining the benefits of such technological improvements. For example, the New York Central has advised in its 1958 annual report, issued within the last month, that:

> "Track maintenance was mechanized throughout the system, and the savings each year are more than the $4,500,000 investment in equipment." (p. 25.)

The New York Central is now obtaining an 87% annual return on investment in CTC installations (Statement of President Perlman, March 15, 1956). The Pennsylvania's new Conway Yard, recently placed in operation, will return 30% annually on investment in reduced operating cost (Statement of President Symes, May 10, 1955).

Because of the extensive changes currently taking place on Northern roads, it is improper to place reliance on expense data shown in their recent annual reports. This was emphasized by NYC President Perlman in his remarks before the New York Society of Security Analysts on October 18, 1957. After describing the extensive improvements taking place on the NYC, Mr. Perlman stated:

> "These then are some of the changes which have taken place on the Central since last we met. Some of you I know are thinking, 'well so what?' They may sound good but they have not been reflected in the earnings of the property. The magnitude of these results has been obscured * * * the tremendous program for additions and betterments has inflated the charges to Transportation and to Maintenance of Way. For when one modern yard permits us to retire eight obsolete yards, or a CTC installation permits us to take up 2 of the 4 main tracks, operating expenses are substantially affected. Practically the entire rebuilding of our line from Elkhart, Indiana to Jackson, Michigan will be a charge this year to operating expenses."

Thus, Mr. Perlman explains why reliance cannot be placed on the recent reported expenses in measuring the costs of the Northern lines at this time. Instead of reflecting the savings which will result from these improved yards and other facilities, their recent expenses are inflated by charges to operating expenses resulting from the vast improvement program.

B. Piggy back rates.

The new service of handling trailers on flat cars with a minimum of switching service is especially adapted to Official territory with its large centers of population and congested highways. The total piggy-back loads have increased from 168,150 in 1955 to 276,767 in 1958, a recession year (AAR car service statistics). This is particularly important to the Northern lines because the traffic which the

roads handle in piggy-back service is about 100% new business (C&O Annual Report, 1958, p. 27).

C. The new legislative climate will be of particular benefit to the Northern lines.

Section 13a of the Act has recently been of special benefit to Northern lines in removing wasteful ferry service and other deficit operations. Subsidies or tax relief have only recently been provided for the New Haven in Boston (Wall Street Journal, August 4, 1958), the Pennsylvania and Reading in Philadelphia (Wall Street Journal, October 17, 1958), and by the State of New York for the New York City commuter lines (New York Times, April 24, 1959). This New York legislation relieves Northern railroads of $1,500,000 in taxes immediately and provides for a gradual four-year increase in tax relief to a maximum of $15,000,000 annually as well as exempting new railroad structures from local real estate taxes.

D. Elimination of duplicate facilities.

It is recognized by the Northern lines that extreme duplication of facilities and overcapacity exists within Official territory. The following statement of C&O President Tuohy before the Senate Subcommittee on Surface Transportation (January 17, 1958, page 631) aptly describes the situation in Official Territory:

> "The railroad industry is suffering from overcapacity. Many railroad lines and facilities are no longer needed in the light of any reasonable traffic expectations and the increased capacity resulting from technological improvements such as centralized traffic control and push-button yards. The public interest would be advanced and the financial stability of the railroads improved by the reduction or elimination of unneeded facilities."

Action is now being taken to eliminate unneeded facilities, but the results of this activity have been obscured in the Northern lines' accounts. According to NYC President

Perlman, "there is going to be 'a tremendous amount of retirements' of physical property which should have been retired before. For several years, he said, the road is going to have inflated operating expenses arising from this course" (Wall Street Journal, December 9, 1954).

Illustrative of the opportunity for joint action in this area is the statement of the Pennsylvania Railroad that consolidation with the New York Central would produce "very substantial savings, approximately $100 million annually" (Traffic World, January 31, 1959, p. 14). The New York Central, in breaking off negotiations for a corporate merger, urged that coordination of facilities be undertaken, nothing that $14 million could be saved annually through use of joint trackage and other facilities alone (Traffic World, January 31, 1959, p. 17, January 17, 1959, p. 26). The pending negotiations between the Erie and the Lackawanna Railroads promise similarly spectacular economies (Wall Street Journal, April 14, 1959).

An example of consolidation of duplicate facilities which has been accomplished since the present divisions were prescribed is found in the New York perishables terminal piers of the Pennsylvania and Erie Railroads. Cost studies for the separate facilities were before the Commission in prescribing the present divisions, 287 I.C.C. 497, 538-539, but the separate pier facilities were thereafter consolidated into a single operation, utilizing the excess capacity of the Pennsylvania Railroad (New York Times, May 1, 1955).

The Northern lines have been slow actually to realize the economies inherent in consolidation of duplicate facilities, but it is recognized that "railroad mergers that will improve service and reduce costs are bound to materialize," according to Pennsylvania Railroad's President Symes. (PRR Annual Report, 1958, p. 3.) It is ironic that the Northern lines, with such opportunities for savings, find it easier to join together in this proceeding to seek additional funds from their connections than they do to cooperate to

realize savings from elimination of duplicate facilities. In this connection, the Commission has ruled in divisions proceedings that "unnecessary or unproductive transportation facilities" may not be considered in determining divisions under Section 15(6). *Nevada-California-Oregon Divisions*, 73 I.C.C. 330, 335.

In summary, two facts stand out:

(1) The Northern lines, with all of their passenger business and 79% of their freight traffic entirely within Official territory, must find the solution to their problems within Official territory. In a comparable situation, the Commission stated in *New England Divisions*, 126 I.C.C. 579, 599, that roads may not seek increased divisions where they, "in disregard of the principle of self-help, unduly rely upon others to carry their burdens."

(2) This is a time of profound change within Official territory. Technological advances already made and being made have not as yet been reflected in, but have obscured the reported earnings. A new legislative climate and new traffic opportunities are only beginning to be realized. And we are authoritatively told by the Pennsylvania Railroad that consolidations to eliminate duplication of facilities are "bound to materialize" in view of the spectacular savings available in the North.

For these reasons, this is an especially inappropriate time to reopen and re-examine the present basis of divisions recently prescribed by the Commission. Prescription of a new permanent basis of divisions should be withheld until the changes now in progress can be reflected in the annual reports of the carriers and some degree of stability attained.

II.

CHANGES IN UNLOADING CHARGES HAVE GREATLY BENEFITED THE NORTHERN LINES.

In their Petition filed on November 1, 1956, the Northern lines relied strongly, as a ground for reopening this

Divisions proceeding, on the Commission's 1956 action cancelling unloading charges on perishables at New York and Philadelphia. (Paragraph V.) However, in their letter to the Secretary dated April 1, 1959, the Northern lines state:

> "In view of the decision of the Commission of September 9, 1958, in *Ex Parte 212* approving the establishment of new unloading charges on fruits and vegetables at New York and Philadelphia, the allegations contained in Paragraph V of the petition are hereby withdrawn."

In blandly withdrawing this portion of their Petition, the Northern lines fail to inform the Commission that, instead of merely neutralizing the point, the action in *Ex Parte 212* turns the situation entirely around. The changed circumstances as to unloading charges actually mean that the present divisions have become more favorable to the Northern lines than when originally prescribed, a situation offsetting other considerations now urged by the North. For this reason, the subject of unloading charges cannot simply be dropped from consideration as the Northern lines now seek to do.

As the Northern lines pointed out in their Petition for Reopening (Paragraph V) and Petition for Leave to File (Paragraph III), the present divisions were prescribed on the assumptions that unloading costs at certain stations were a part of the service covered by the joint line haul rate and, that the unloading charges prescribed in I. & S. No. 5500, 286 I.C.C. 119, would remain in effect. The significant feature of the decision in I. & S. 5500 was that the charges there prescribed were approximately *one-half* of the charges sought, because of the Commission's conclusion "that the cost of unloading should be borne partly by the shippers and partly by respondents." 286 I.C.C. 119, 140, 141. When the charges were cancelled by the Commission in 1956, 298 I.C.C. 637, the Northern lines urged this change in circumstances in their Petition herein as a basis for increased divisions for their account.

The unloading charges now in effect as a result of *Ex Parte 212* did not restore the status quo as of the time the present North-South Divisions were prescribed by merely reinstating the partial charge in effect at that time. *Ex Parte 212* caused a far greater change by completely severing the unloading service from the line-haul service covered by the joint rates subject to divisions. This appears from the treatment of the unloading services as an "integral part of the through rate" in I. & S. 5500 (See 298 I.C.C. 637, 639, 640-41, 658), and the contrasting treatment in *Ex Parte 212* wherein the Commission found that conditions had changed and that the unloading services, for perishables and non-perishables as well, could no longer be treated as a part of delivery under the line-haul rates. The Commission concluded that "the cost of these loading and unloading services should and must be borne, as nearly as may be, by the shippers and consignees for whom they are rendered." *Ex Parte 212,* 304 I.C.C. 289, 375.

Separate unloading charges accruing entirely to the Northern lines, approved in *Ex Parte 212,* were estimated as producing $9,400,000 per year (304 I.C.C. 289, 360). This is revenue over and above the amount yielded by the authorized increase of $1.00 per ton for loading or unloading domestic carload freight at other points and which it was estimated would yield $5,100,000 per year. Brief of Petitioning Railroads, Part III, pp. 139-140.

In summary, the present divisions were prescribed on the premise that unloading services were part of the joint line-haul rate and that the partial charge then in effect should be credited in considering these costs as part of the service under the joint rate being divided. When the partial charges were cancelled, the Northern lines urged this as an important reason for changing divisions in their favor. Now that unloading services are, as a result of *Ex Parte 212,* no longer a part of the services performed under the line-haul rates, the present divisions of such rates are, for this reason, unduly high for the Northern lines. This

change in circumstances, the importance of which the Northern lines emphasized when it worked against them, now works the other way. This important offsetting factor must be taken into consideration in evaluating any other contentions of the Northern lines that changes have occurred since the present divisions were prescribed.

In addition to the complete change in the situation as to unloading charges the Commission has approved additional tariff provisions which operate primarily to the benefit of the Northern lines.

These include the *Ex Parte 212* increase of 6 cents per 100 pounds in the rates on waterborne traffic, applicable only to rates which apply to or from shipside (304 I.C.C. 351), the increase to "accrue to the railroads performing the port terminal services or bearing the expense of such services." 304 I.C.C. 351, 356. Rates on waterborne traffic moving through the North Atlantic ports generally apply to or from shipside, whereas the rates on like traffic to or from Southern territory and moving through the South Atlantic and Gulf ports are generally non-shipside rates (304 I.C.C. 353-354). This is an important reason why the revenue of the Eastern Railroads from the 6-cent charge was estimated at $9,000,000 per year as compared with less than $1,000,000 for the Southern Railroads. 304 I.C.C. 354. The net effect of this change was, therefore, to increase the divisions of the Northern lines from the total charges assessed for the line-haul movement of waterborne traffic.

Further, under the heading "Diversion, Reconsignment and Other" in *Ex Parte 212,* the Commission authorized the Eastern Railroads to impose certain new and increased charges for diversions, reconsignments and other accessorial services. 304 I.C.C. 377-380; see also 302 I.C.C. 698-699. The amount of revenue which the Eastern Railroads will obtain from these new and increased charges cannot be determined exactly, but it will unquestionably be large. (See Brief of Petitioning Railroads, Part III, p.

176.) The Commission should know the effect upon Northern Railroads of its actions in *Ex parte 212* before considering reopening these cases.

III.

THE FACT THAT DOCKET NO. 29885 HAD BEEN REOPENED FOR FURTHER HEARING WITH RESPECT TO THE DIVISIONS OF JOINT INTER-TERRITORIAL RATES TO OR FROM POINTS ON FOUR SHORT OR WEAK LINES PROVIDES NO JUSTIFICATION FOR A GENERAL REOPENING.

In their Petition (Paragraph IV), the Northern lines state that "the Commission has already re-opened No. 29885 for further hearing with respect to the divisions" of four short or weak lines.

The facts are as follows: In its report on reconsideration, the Commission expressed "doubt whether the present record contains all the facts which should be currently considered in establishing a proper basis of divisions of joint rates between Official territory and points on their lines [Norfolk and Southern, the Atlantic and East Carolina, and the Beaufort & Morehead]". In order to develop the facts as to the special problems presented by these roads, the Commission decided that "No. 29885 will be assigned for further hearing on that issue." 289 I.C.C. 4, 8. The hearing to be held for the Atlantic and Danville was similarly limited to the special circumstances relating to that road. 291 I.C.C. 90, 91-92.

The fact that the situation with respect to these four lines was so different from that with respect to the Southern lines generally as to require reopening for *separate* hearings on the *special* problems of those small lines provides no basis whatever for the *general* reopening and retrial of the case sought by the Northern lines Petition herein.

IV.

CHANGES IN CONDITIONS AS REFLECTED IN STATISTICS OTHER THAN COST.

In Paragraph VI of their Petition, the Northern lines claim generally that they wish to present other evidence which has become available since the close of the record in Docket No. 29885. Since the nature of this evidence is not revealed, such a general assertion provides no ground whatever for reopening this proceeding.

Presumably, the Northern lines propose to present statistical data for years subsequent to 1951, the latest data before the Commission when it prescribed the present divisions. See Petition, page 11. The reason for the Northern lines' lack of specificity on the nature of these data is suggested by the following table showing changes in Net Railway Operating Income of the respective groups of roads since the record was closed:

Year	Southern Region	Percent	Official Territory (East Dist. and Poca. Region)	Percent
1951	$157,136,598	100	$382,280,143	100
1956	184,034,606	117	466,718,173	122
1957	155,255,698	99	385,277,842	101

Source: Annual Reports of the Carriers.

This comparison emphasizes the lack of any basis for general reopening in the Petition of the Northern lines.

This is particularly important where, under the divisions prescribed by the Commission, the Northern lines are presently obtaining nearly 8% in excess of a mileage prorate due to the construction of the prescribed integer scales in a manner unduly preferential to the Northern carriers with their shorter average haul. See Tr. C-2600, C-2603. The prescribed scales contain an allowance of 65 integers for the first 50-mile block and 12 integers per 50 miles thereafter (287 I. C. C. 497, 552). If 12 integers represent

50 miles of service, the prescribed scale assigns the equivalent of 270 miles of service for only 25 miles of average haul in the first mileage block, an allowance far in excess of that justified by terminal service.

The Northern lines' Petition is silent as to the ability of the Southern lines to respond to this further attempt to reduce earnings which are already too low. In fact, the rate of return of the Southern roads in 1957 was only 4.14% and, with the *Ex Parte 212* increases, was estimated at only 3.57% in 1958 (304 I.C.C. 289, 302). Rates of return at such a level are not only substandard and inadequate as a matter of fairness to the owners of the properties, but earnings at such a low level imperil the ability of the Southern lines to provide the service necessary to meet the transportation needs of the growing South. This is a matter of greatest concern to the carriers and to this Commission in administering Section 15(6) in light of the national transportation policy. It is not in the public interest that hard earned and inadequate revenues be taken from the necessitous to reward those who appear more aggressive in seeking increases in rates and divisions.

The divisions here at issue affect only 5% of the total revenues of the Northern lines. In contrast, the Southern lines are heavily dependent on the divisions revenue here involved, to the extent of 25% of their total freight revenues. This high degree of leverage makes it apparent that the degree of injury to the individual Southern lines from the claims of the Northern lines is many times greater than the degree of benefit that can possibly accrue to the respective Official Territory lines from the transfer of any given amount of revenue.

Under such circumstances, the Commission should not permit reopening of a divisions proceeding recently concluded when it is evident that the Northern lines have not exhausted their means of self-help and are seeking instead to cast upon their connections burdens which can only be dealt with within Official territory itself.

CONCLUSION.

In light of the importance to the Commission in its administration of the Act, and to the Southern lines, of the issues raised by the Northern Lines' Petition herein, it is submitted that oral argument before the Commission should be had on this Petition. Upon argument and consideration of the reasons set forth in the foregoing reply, the Petition of the Northern lines for general reopening, for further hearing and for modification of the order in these cases, should be denied.

Respectfully submitted,

PETITION OF SOUTHERN GOVERNORS' CONFERENCE FOR LEAVE TO INTERVENE AND TO ANSWER.

[May 14, 1959]

COMES NOW, your Petitioner, the Southern Governors' Conference, and respectfully shows that it has a direct interest in the matters in controversy in the above-styled proceedings and in the petition of the Eastern railroads, dated November 1, 1956, for general reopening of said proceedings for further hearings and for modification of prior orders in those proceedings. Your Petitioner desires to intervene in said proceedings for the purpose of answering said petition and participating in the proceedings if they are reopened, and as grounds for its proposed intervention, Petitioner shows:

I

The Southern Governors' Conference is composed of the Governors of the Southern States of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee and Virginia and the Governors of the border States of Arkansas, Oklahoma, Texas, West Virginia, Maryland and Delaware. The Southern Governors' Conference was formed primarily for the purpose of furthering the economic development of the Southern Region and has, since 1937, actively interested itself in freight rates applying on movemnets to, from and within Southern Territory. The Southern Governors' Conference has actively participated in a number of proceedings before your Commission wherein was involved transportation mat-

ters affecting the welfare of the citizens of the Southern States.

II

The railroads in the South, who are the defendants and respondents in these proceedings, operate a network of lines throughout our region. Those railroads provide the entire South with essential rail transportation services and facilities and, in addition to their services in that respect, are an important factor in the South's economy due to their substantial outlays for wages, taxes, materials and supplies and in their continuing programs to attract additional industry to the South.

III

Although for many years confined almost exclusively to the production of agricultural commodities, the new South of today produces, in addition to those basic agricultural commodities, large quantities of various forest products, products of mines and manufactured articles which are marketed not only within our own Southern Territory but also within the Official Territory States served by the Eastern railroad petitioners in these proceedings. Many of these commodities are of such character that their distribution is best effected by rail transportation and the producers and manufacturers within the South are accordingly still dependent in large measure for the marketing of their products in the East upon a sound rail transportation system which can provide the needed services at reasonable rates.

IV

For many years the Southern Governors' Conference led the fight against the inequitable freight rate barriers which had stifled the industrial growth of the South since the Civil War and only in 1952 did we finally gain the rate

parity which meant so much to the economic welfare of our region. The diversification of Southern industry and the expansion of the South's economy, already materially aided by the excellent network of rail lines operated by the defendants and respondents in these proceedings, was stimulated to a considerable degree by the attainment of this freight rate parity. The Southern Governors' Conference vigorously opposes any diminution in the revenues of the Southern carriers which would jeopardize the maintenance of the present rail services available to the South and preclude the expansion of the rail transportation facilities essential for the continued growth and welfare of our agriculture and industry. As was demonstrated in recently concluded or currently pending applications to our regulatory commissions for increases in intrastate rates and charges within our region, the railroads in the South are not in such financial condition as to be able to withstand the loss of the many millions of dollars in revenues here sought by the petitioning Eastern railroads without either serious adverse effect on the transportation services being rendered to the citizens of the South or the imposition on those citizens of a substantial further freight rate increase. Further, there is thinly disgused, in the instant proposal of the Eastern carriers for increase in their divisional factors above the parity of the present "equal-factor" basis, a resurrection of the freight rate differential this Conference was organized to combat—a revival which would force the Southern shippers and Southern railroads to subsidize the Eastern shippers and railroads to the great detriment and harm of our region.

V

The Southern Governors' Conference was not aware of the revival of these proceedings or of the importance of these proceedings to the railroads and the shippers of the South until recently so informed by those officials of our

respective Southern States charged with the duty of protecting the transportation interests of our citizens. The magnitude and importance of this case and the inequity of the Eastern lines' proposal has become readily apparent to the Southern Governors' Conference and the Conference has concluded to seek intervention in these proceedings for the purpose of rendering its assistance in the protection of the interests of the Southern user of rail transportation services.

VI

Your Petitioner, therefore, avers that it has a direct interest in these proceedings and should be permitted to intervene. Its intervention will not broaden the issues but will insure that the interests of the public of the States in the South will be adequately presented to your Commission.

WHEREFORE, your Petitioner, the Southern Governors' Conference, prays for leave to intervene in these proceedings in support of defendants and respondents and to be treated as a party to such proceedings. Petitioner further prays that it be granted the privilege of answering the Eastern railroads' petition of November 1, 1956, Petitioner's answer to be filed by May 29, 1959, the due date now set for such answers.

(Title omitted in printing.)

PETITION OF SOUTHEASTERN ASSOCIATION OF RAILROAD AND UTILITIES COMMISSIONERS FOR LEAVE TO INTERVENE AND TO ANSWER.

[April 22, 1959]

COMES NOW, your Petitioner, the Southeastern Association of Railroad and Utilities Commissioners, and respectfully shows that it has a direct interest in the matters in controversy in the above-styled proceedings and in the petition of the Eastern railroads, dated November 1, 1956, for general reopening of said proceedings for further hearings and for modification of prior orders in those proceedings. Your Petitioner desires to intervene in said proceedings for the purpose of answering said petition and participating in the proceedings if they are reopened, and as grounds for its proposed intervention, Petitioner shows:

I

The Southeastern Association of Railroad and Utilities Commissioners is a voluntary non-profit association of the State regulatory commissions of Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee and Virginia. The duties of the member commissions of this Association include, among other things, participation in proceedings before the Interstate Commerce Commission wherein the interests of citizens of their respective states appear to be involved. The Southeastern Association of Railroad and Utilities Commissioners represents its membership in proceedings before the Interstate Commerce Commission wherein is involved the interests of the member States as a whole.

II

The defendants and respondents in these proceedings operate extensive lines of railroad within and through the States comprising the membership of this Association. Those railroads in operating this network of lines throughout those States provide the entire area with essential rail transportation services and facilities and further contribute to the economic welfare of the South through their substantial payments of wages and taxes and their purchase of materials and supplies and in their promotion of further industrialization of the South by location of additional industries on their lines.

III

The member States of this Association produce large quantities of agricultural, forest, mine and manufactured products which must find markets not only within our Southern Territory but also within the Official Territory States served by the Eastern railroad petitioners in these proceedings. Although there has been some diversion to the trucks in the marketing of these commodities in these territories, the producers and manufacturers located within the South are still dependent in large measure for the marketing of their products in the East upon a sound rail transportation system which can provide the needed services at reasonable rates.

IV

The diversification of Southern industry and the growth of the South's agricultural and industrial economy has been possible only because of our excellent transportation system, including the network of rail lines operated by the defendants and respondents in these proceedings. In order to meet the transportation needs of our area the railroads in the South must have available to them revenues adequate to provide not only for the maintenance of their present services but for expansion of their transportation facilities

essential for the continued growth and welfare of our agriculture and industry. There has either been recently granted by, or is now pending before, the member States of this Association requests from the railroads in the South for increase in freight rates and charges—those requests averring that the financial condition of those railroads is so unfavorable at the present time as to necessitate serious retrenchments in their maintennace and equipment purchase programs and the resultant release of many employees formerly engaged in those duties. It is obvious that if the Southern railroads are required to contribute to the Eastern railroads the large amounts of revenues sought by those Eastern railroads in these proceedings, the financial condition of the Southern carriers would be so adversely affected as to require either serious impairment of their present services with further retrenchment in their maintenance and equipment programs or the imposition of a substantial additional freight rate increase on the shippers of the South.

V

For many years the South fought against the inequitable freight rate barriers which had stifled its industrial growth since the Civil War and only in 1952 did we finally achieve the rate parity which meant so much to the economic welfare of our region. The instant proposal of the Eastern carriers for increase in their divisional factors above the parity of the present "equal-factor" basis would revive in another guise this freight rate differential and force the Southern railroads and Southern shippers to subsidize the shippers and railroads of the East to the great detriment and harm of our region.

VI

The member Commissions of this Association discussed and planned intervention in these proceedings when the petition of the Eastern railroads was filed in 1956. However, as the record will indicate, the petition was promptly

followed by a request for indefinite deferral of action on such petition pending negotiations between the Eastern and Southern carriers for voluntary settlement of this divisional question. As the result, neither the Southeastern Association of Railroad and Utilities Commissioners collectively, nor its member States individually, intervened in these proceedings, hoping that the railroads involved could work out an amicable solution to their divisional problems. Apparently such was not to be, however, and this Association, upon learning of the filing of request for immediate processing of the petition of the Eastern railroads, considered the matter at its April 15-18, 1959 Spring Conference at Miami Beach, Florida and without dissenting vote concluded to seek intervention in these proceedings for the purpose of protecting the interests of the Southern user of rail transportation services.

VII

Your Petitioner, therefore, avers that it has a direct interest in these proceedings and should be permitted to intervene. Its intervention will not broaden the issues but will insure that the interest of the public of the States in the South will be adequately presented to your Commission.

WHEREFORE, your Petitioner, the Southeastern Association of Railroad and Utilities Commissioners, prays for leave to intervene in these proceedings in support of defendants and respondents and to be treated as a party to such proceedings. Because of the importance and complexity of the case Petitioner prays that it be granted at least 60 days in which to answer the Eastern railroads' petition of November 1, 1956.

Respectfully submitted

ORDER

Interstate Commerce Commission

No. 29885.

OFFICIAL-SOUTHERN DIVISIONS.

In The Matter of Divisions of Joint Rates Between Official and Southern Territories.

No. 29799.

The Akron, Canton & Youngstown Railroad Company, et al.

v.

Aberdeen and Rockfish Railroad Company, et al.

In the Matter of Petitions for Leave to Intervene.

PRESENT: Kenneth H. Tuggle, Chairman, to whom the above-entitled matter has been assigned for action thereon.

Upon consideration of the record in the above-entitled proceedings; the petitions filed on behalf of the Southeastern Association of Railroad and Utilities Commissioners; the Southern Governors' Conference; Alabama Public Service Commission; Florida Railroad and Public Utilities Commission; the Georgia Public Service Commission; Kentucky Railroad Commission; The Louisiana Public Service Commission; Mississippi Public Service Commission; North Carolina Utilities Commission; The Public Service Commission of South Carolina and the Tennessee Public Service Commission for leave to intervene and the Eastern Railroads' reply to the petition of the Florida Railroad and Public Utilities Commission.

It is ordered, That the Southeastern Association of Railroad and Utilities Commissioners, the Southern Governors' Conference, Alabama Public Service Commission, Florida Railroad and Public Utilities Commission, the Georgia Public Service Commission, Kentucky Railroad Commission, The Louisiana Public Service Commission, Mississippi Public Service Commission, North Carolina Utilities Commission, The Public Service Commission of South Carolina, and the Tennessee Public Service Commission be, and they are hereby, permitted to intervene and be treated as parties to these proceedings, with the right to answer the Eastern railroads' petition of November 1, 1956, and to participate in all further proceedings therein.

It is further ordered, That a copy of this order be served upon each of the parties to these proceedings.

Dated at Washington, D. C., this 26th day of May, A. D. 1959.

By the Commission, Chairman Tuggle.

HAROLD D. MCCOY,
Secretary.

[SEAL]

ORDER

At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D.C., on the 20th day of July, A. D. 1959.

No. 29885.

OFFICIAL-SOUTHERN DIVISIONS.

In The Matter of Divisions of Joint Rates Between Official and Southern Territories.

No. 29799.

The Akron, Canton & Youngstown Railroad Company, et al.

v.

Aberdeen and Rockfish Railroad Company, et al.

It appearing, That on November 2, 1956, the Eastern Railroads filed a petition for leave to file petition for general reopening for further hearing and for modification of order and their petition for general reopening for further hearing and for modification of the order of January 12, 1953, as modified by order of May 26, 1953, requiring the establishment of divisions of joint rates prescribed between Official and Southern Territories; which petitions were held in abeyance at the request of the interested parties;

And it further appearing, Pursuant to the Eastern Railroads' request of April 1, 1959, the time for filing replies to said petition was fixed as May 1, 1959 and subsequently postponed to May 29, 1959.

Upon consideration of the record in these proceedings, the said petition of Eastern Railroads, replies of the Southern Railroads filed May 1, 1959, of the Florida Railroad and Public Utilities Commission filed June 1, 1959, and

of the Southern Governors' Conference and Southeastern Association of Railroad and Utilities Commissioners filed May 27, 1959, and it appearing that the Eastern Railroads have represented that they are prepared to present promptly their evidence in chief by verified statements;

It is ordered, That the petition for leave to file a petition for general reopening for further hearing and for modification of the order, be, and it is hereby, granted and the petition received and filed of record;

It is further ordered, That these proceedings be, and the same are hereby, reopened for further hearing at the time and place indicated in the following paragraph and at times to be hereinafter designated by the Commission;

And it is further ordered, That the Eastern Railroads submit their evidence in verified statement form on or before October 1, 1959, copies of which shall be forwarded as follows: three copies to the Secretary of the Interstate Commerce Commission, two copies to the Southern Railroads (unless a larger number is desired and request made therefor), and one copy to each intervener supporting the Southern Railroads (upon proper request therefor); and that the affiants submitting such verified statements shall be available for cross-examination at an oral hearing assigned on November 2, 1959, at 9:30 o'clock a.m., United States Standard Time, at the offices of the Interstate Commerce Commission, Washington, D. C., before Examiners Oren G. Barber and T. R. Roper.

By the Commission.

HAROLD D. MCCOY
Secretary

[SEAL]

VERIFIED STATEMENT NO. 1 OF L. E. BUTLER.

Due Date: October 1, 1959.

[1]

My name is L. E. Butler. I am Assistant Chairman of the Traffic Executive Association-Eastern Railroads with headquarters at 22 West Madison Street, Chicago 2, Illinois. I am also General Chairman of the Eastern Railroads Committee handling Official—Southern Divisions. I have been engaged in freight traffic matters for approximately forty-four years as an employee of individual railroads and traffic associations.

* * *

[20]

Traffic Pattern.

In order to demonstrate the percentage relationship of the number of cars and tons of freight handled within Official, within the South, and between Official and the South, I have prepared a statement showing that information. Exhibit No. D to Verified Statement No. 1 is a statement taken from the data contained in I.C.C. Bureau of Transport Economics and Statistics One percent Waybill Analyses as shown thereon.

The year 1947 was the first year that the Interstate Commerce Commission Bureau of Transport Economics and Statistics issued its one percent waybill analyses. This statement shows the percent that the cars and tons for subsequent years up to 1958 are of the 1947 cars and tons.

The change in the traffic pattern in recent years may be shown by using the tons for the year 1948 as 100 and determining the percentages the tons in the subsequent years are of the 1948 tons.

[21]

The following table, expressed in percentages, shows that information.

1948 = 100

	Official to Official	South to South	Between Official and South
1949	79.56	86.98	80.27
1950	86.68	102.36	98.52
1951	93.28	114.88	103.09
1952	85.99	113.11	102.98
1953	88.95	114.23	103.25
1954	75.29	113.30	91.91
1955	87.97	123.01	102.30
1956	92.49	137.06	111.49
1957	86.25	120.73	102.14
1958	68.81	122.63	91.78

It will be seen from the above table that so far as tons are concerned, within Official territory the percents for the years subsequent to 1948 are considerably less than on traffic within the South, while traffic between Official and the South, except for four years, exceeded that for the year 1948.

This showing demonstrates the increasing importance of this traffic to Official territory lines and indicates that their needed revenue must come out of their Southern inter-territorial traffic to the greatest possible extent that can be justified.

* * *

VERIFIED STATEMENT NO. 3 OF J. L. HEYWOOD.

(Verified September 28, 1959).

[1]

My name is J. L. Heywood and my office is located at Six Penn Center Plaza, Philadelphia, Pennsylvania. My present position, which I have held for over seventeen years, is Assistant Comptroller of the Pennsylvania Railroad Company. I have been employed in the Accounting Department of the Pennsylvania Railroad Company for forty-four years.

My present duties include direct supervision over the compilation of statistics, cost studies and testimony for presentation before the Interstate Commerce Commission and other regulatory commissions. I have been engaged in the analysis and preparation of railroad cost studies since 1930, principally in connection with rate cases.

As Chairman of the Official Lines' Accounting Committee in this case I supervised and assisted in the compilation of the various statistical and cost exhibits which I now desire to present.

The first exhibit I wish to present consists of 31 pages including a "Table of Contents" and the cover page is entitled "Financial, Operating and Traffic Statistics."

For comparative purposes the Class I carriers are grouped as follows:

United States
Eastern District (Excluding Pocahontas Region)
Eastern District (Including Pocahontas Region)
Southern Region

[2]

An explanation of the above groupings is given on Page A of the exhibit. The groupings represent the present condition and reflect the mergers of subsidiaries and others that have taken place during the years covered by the ex-

hibit. For example the Alton R. R. was absorbed by the Gulf, Mobile & Ohio as of June 1, 1947. Prior to that date the Alton was in the Western District but subsequent to June 1, 1947 the results for the Alton are included with the Gulf, Mobile and Ohio in the Southern Region.

In addition to the groupings of Class I carriers previously described, I have also shown various statistics and results for the following carriers:

Baltimore & Ohio R.R. Co.
Chesapeake and Ohio Ry. Co.
New York Central R.R. Co.
New York, New Haven & Hartford R.R. Co.
Pennsylvania Railroad Co.
Atlantic Coast Line R.R. Co.
Illinois Central R.R. Co.
Louisville & Nashville R.R. Co.
Seaboard Air Line R.R. Co.
Southern Ry. Co.

Here again Page A indicates the carriers that have been merged and the periods for which the merged companies have been included in our compilations.

The sources of most of the material contained in this exhibit are the carriers' reports to the Interstate Commerce Commission or the Commission's reports which are compiled from

[3]

the carriers' individual reports.

Pages 1 to 14, inclusive, of the exhibit show the investment in Railway Property used in transportation service, revenues, expenses, net railway operating income, rate of return and net income for the years 1921 to 1958, inclusive, and the averages for the five years ending 1925, 1930, 1935, 1940, 1945, 1950, and 1955. As indicated in the footnote, the investment in railway property used in transportation service includes investment in Road and Equipment,

Account 708 Cash and Account 716 Materials and Supplies prior to 1957 and Account 701 Cash and Account 712 Materials and Supplies for 1957 and 1958. Column 2 shows the investment in railway property after accrued depreciation and amortization and is the base for the determination of the rate of return shown in column 10. The rates of return on depreciated investment have been summarized on page 21 for the individual railroads.

It will be noted that, while prior to 1940 the rate of return for the Southern Region was generally lower than either of the Eastern Groups, since 1941 the rate of return of the Southern Region has been in excess of the rate of return of both the Eastern District excluding and including the Pocahontas Region.

[4]

One of the reasons for the shift in relative earning power of these groups of carriers is the relatively greater increase in the total operating revenues of the Southern carriers than those of the Eastern carriers due, in part, to the great development of the South. The average of the total operating revenues for the Eastern District (excluding Pocahontas Region) (page 2) for the five years, 1951-1955, is 124.2% greater than for the five year average 1936-1940 and 153.3% greater than the annual average for 1931-1935. On the other hand, the Southern Region (page 4) increases 176.5% and 231.3% during the same periods. This unequal increase in total operating revenue has continued into 1958, which year shows a decrease of 12.6% under the 1951-1955 average for the Eastern District (excluding Pocahontas Region) with decrease of only 6.1% for the Southern Region.

The following summary based on pages 2 and 4 shows that the relative increases in freight revenue follows closely the pattern described above in connection with the total operating revenues.

Percentage Increase in Freight Revenue for Five Year Average 1951-1955

Increase over	*Eastern District (Excl. Poca. Reg.)*	*Southern Region*
1936-1940	128.9%	185.4%
1931-1935	167.9	245.3
	Decrease in Freight Revenue—1958	
1951-1955	13.3%	4.5%

[5]

Page 18 of my exhibit illustrates in another manner the fact that the freight revenue has increased substantially more in the South than in the East. On this page is shown the percentages of the total freight revenue for the United States that were received by the various territorial groups named. The period from 1928 to 1958 is covered. It will be noted that in 1928 the Eastern District excluding the Pocahontas Region had 41.66% of the total freight revenue of Class I carriers in the United States. This dropped to 41.54% in 1930 which was followed by minor decreases to 39.53% in 1942. From 1942 an irregular but consistent decline has taken place until 1958, when the Eastern District had only 32.67% of the U. S. freight revenue.

In contrast, the Southern Region had 13.25% of the total freight revenue in 1928. This had increased to 14.28% by 1942 but in 1958, the Southern Region received 14.56% of the total freight revenue. This is an increase of 1.31 points for the Southern Region compared with a decrease of 8.99 points for the Eastern District excluding Pocahontas Region. The Southern Region proportion of the United States in recent years is also higher in relation to the Eastern District than in the previous hearings in this case, while generally included statistics (not costs) to and including 1950.

The freight revenue for the years 1928 to 1958, inclusive, for the selected carriers as well as the percentage that the revenue of each carrier is of the total freight revenue of the United States Class I carriers is shown on pages 19 and 20.

[6]

Revenue ton miles for the years 1928 to 1958, inclusive, for the territorial groups are shown on page 15 along with indices based on both 1928 and 1950 as 100. This page demonstrates the expansion that has taken place in the revenue freight traffic in the Southern Region particularly during and since World War II. During the early 1930's this territory suffered reductions in revenue ton miles greater than the losses suffered by the Eastern District and the rest of the industry. However, by 1940 the Southern Region had regained the lost traffic as shown by an index of 84.2. By 1942, index of 154.8 (1928 = 100) is recorded for the Southern Region and the revenue ton miles of the Eastern District (excluding Pocahontas Region) was 139.8. During the war years the Southern Region index reached a high of 175.6 (1943) compared with revenue ton miles for 1928 and ever since has greatly exceeded 1928. On the other hand, during the war years, the Eastern District's index reached a high of 155.1 (1943) and after an 115.9 in 1956 has had indices of 107.7 and 89.9 for the years 1957 and 1958, respectively.

An examination of the indices of revenue ton miles for the individual carriers (pages 16 and 17) shows that, 1958 indices for the Southern lines range from 105.9 for the Louisville and Nashville to 287.9 for the Seaboard Air Line.

[7]

For the Eastern lines the 1958 indices read from a low of 79.0 for the New Haven to the 106.4 for the Baltimore & Ohio and 124.5 for the Chesapeake & Ohio.

Pages 22 to 24, inclusive, covering revenue tons originated and terminated, all show the same general pattern, previously noted, of changes in volume for the three territories and the individual carriers in the Eastern District and Southern Region. On an index basis, relative parity was maintained, with certain minor exceptions, for the period up to World War II. However, subsequent to 1940, the increases in the Southern Region have substantially exceeded any increases reported for the Eastern District.

Pages 25, 26 and 27 cover various operating statistical averages for the Class I Railroads in the Eastern District (including Pocahontas Region) and (excluding Pocahontas Region) and Southern Region and individual railroads.

Page 28 covers Return on Valuation (I.C.C. Elements of Value) for years 1947 to 1957. The figures are shown for the Eastern District (excluding Pocahontas Region), Eastern District (including Pocahontas Region) and Southern Region.

My next exhibit consists of 28 pages, a cover page and a table of contents. It is entitled "Rail Costs."

The costs included in this exhibit are based on the application of Rail Form A, 9-53 and 7-57 "Formula for Use in Determining Rail Freight Service Costs" prepared by the Cost

[8]

Finding Section, Bureau of Accounts, Cost Finding and Valuation of the Interstate Commerce Commission.

The return on investment has been computed at the rate of 6 percent on a valuation base representing the book investment in road and equipment plus cash and material and supplies less recorded accrued depreciation and amortization.

The fully distributed costs appearing in my exhibit cover out of pocket and constant expenses plus 6 percent return on investment but do not include either Less-Carload or Passenger service deficit nor is return on the investment

assigned to the two last mentioned services included. Federal Income Taxes have also been excluded from the cost figures.

As indicated in the heading on each page of the exhibit, the line haul costs have been increased to reflect circuity. Therefore, the respective costs may be drawn directly from the exhibit for various short line hauls.

Page 1 sets forth the Form A terminal and line-haul unit cost factors for 28.9 tons in box cars and for 16.3 tons in refrigerator cars for the Eastern District and the Southern Region for the years there shown. Page 1a, as with other a-numbered pages of this exhibit, shows corresponding costs data for the Eastern District including Pocahontas Region.

[9]

Pages 2 to 7 inclusive are scales of fully distributed Form A costs for the Eastern District and Southern Region for 28.9 tons in box cars and 16.3 tons in refrigerator cars for the several years for which unit costs are shown on page 1. The scales on page 8 are the same as at page 6 except they have the Passenger and Less Carload Deficiencies included. The line-haul element in these scales has been increased to reflect circuity. The circuity factors for box cars are 13 percent for Eastern District and 9 percent for Southern Region, these were developed from Ex. A to V. S. No. 1 and for refrigerator cars the percents were 6 percent for Eastern District and 5 percent for Southern Region developed from Ex. B to V. S. No. 1.

Page 9 compares the percentages which Eastern District costs are of Southern Region costs for the several years at 100, 400, 700, and 1000 miles for both box and refrigerator car costs. As there indicated the Eastern costs are substantially higher than those for the Southern Region.

Page 10 compares the percentages which Eastern District costs are of the total Eastern District and Southern Region costs for the several years when applied to the aver-

age short-line hauls of the citrus fruit and fresh or green vegetable traffic and to all other traffic as such hauls were developed in Witness Butler's traffic study, Ex. A & B to V. S. No. 1.

[10]

Sheets 11 to 15 of this exhibit contain Form A cost data taken or derived from the Form A cost information currently prepared and issued by the Bureau of Accounts, Cost Finding and Valuation of the Interstate Commerce Commission. Page 11 sets forth the terminal and line-haul unit cost factors for 28.9 tons in box cars and 16.3 tons in refrigerator cars for the Eastern District and Southern Region for the years 1947 to 1956, inclusive, each as adjusted to January 1 of the second year thereafter. Page 12 of this exhibit sets forth a comparison of the costs for the Eastern District and Southern Region at the average short-line hauls developed in Witness Butler's traffic study, Ex. A & B to V. S. No. 1, based upon the I.C.C. Form A factors set forth on the preceding page. Also shown is the percent of the total costs both East and South.

Page 13 of this exhibit sets forth the terminal and line-haul unit cost factors based on the Commission's data previously described for each of the years 1950 to 1956, inclusive, which differ from the unit cost factors shown in page 11 in that the adjustment to January 1 of the second year following has been omitted.

Page 14 of this exhibit is a comparison of the costs East and South at the average hauls similar to that set forth at page 12 but based upon the costs for the unadjusted years as shown at page 13.

[11]

Page 15 is a comparison of the percentages which Eastern District costs are of the total Eastern District and Southern Region costs under the Eastern carriers' Form A basis and under the I.C.C. basis at the short-line average

hauls taken from the Butler traffic study, Ex. A & B to V. S. No. 1. These comparisons are made only for the years 1950, 1952, 1954, 1956 and 1957. These are the years for which I have comparable figures available. As indicated by this comparison the results under the Eastern carriers Form A basis and under the I.C.C. basis are closely comparable. In this connection it should be remembered that the Eastern carriers' Form A costs are freight service costs without passenger or less carload deficits and are based upon a rate of return of 6 percent on net investment without allowance for income taxes, while the I.C.C. basis of costs includes passenger and less carload deficits and includes a rate of return at 4 percent on Commission Elements of Value after allowance for income tax.

Page 16 is a comparison of fully distributed freight service costs (excluding passenger and less carload deficits) as computed by me for the year 1956 basing the 6 percent return before income taxes on the I.C.C. Elements of Value for both 28.9 tons in box cars and 16.3 tons in refrigerator cars.

Sheet 17 shows Form A cost scales of composite rail costs for all cars for an average load of 28.9 tons for all traffic

[12]

(except citrus fruits and fresh or green vegetables—Northbound and coal and coke) for the Eastern District and Southern Region from the application of costs in Ex. C to V. S. No. 3.

My next Exhibit (Ex. C to V. S. No. 3), entitled "Revenues and Costs for Traffic Between Points in Official Territory and Points in Southern Territory", prices out the traffic in Witness Butler's traffic study (Ex. A to V. S. No. 1).

The first page of this exhibit shows the average service unit costs for each type of freight car for both the East-

ern District and the Southern Region. The line haul costs are stated in cents per car mile and per ton mile and the terminal costs are stated in cents per loaded car and per ton originated or terminated. The service unit costs are based on the application of the Commission's Form A cost formula described more fully in connection with the exhibit containing cost scales. As indicated on this page the costs used are 1956. If 1957 costs were used, the costs for the Eastern District roads would be even higher in relation to the Southern Region costs than 1956. I believe that this will be true also on the basis of 1958 costs.

Since the traffic moving between the Official Territory and Southern Territory would normally move through in the same car, the same tare weights were used in each territory for the various types of car. The tare weights used were the weights shown for the United States on page 10 of I.C.C. Statement 2-58 based on studies made by the Cost Finding Section.

[13]

On the other hand, the movement of the empty car before or after the loaded move would vary in the different territories depending on the car supply and other conditions that may exist in each territory. Therefore, the ratio of empty to loaded car miles used in developing the comparative unit costs (page 1) were the ratios found to exist in the respective territory. The ratios for all types of freight cars were based on the seven day study the data for which were furnished in response to the Commission's order dated July 16, 1957. (See page 13 I.C.C. Statement No. 2-58.)

The next eight pages (2 to 9) show the method followed in computing the composite costs, both line haul and terminal, for the different commodity groupings for use in the following pages of the exhibit. As indicated by footnotes the type of car is based on Mr. Butler's Ex. A to V. S. No. 1 and the basic unit costs are from page 1 of the exhibit.

The following pages, starting with page 10, show a comparison of the revenues as settled with the costs for both the Eastern District and the Southern Region. On these pages an item of cost covering Loss and Damage is shown. The Loss and Damage cost is based on the separation of claim payments for the United States by commodity groups and assigned on the basis of tons originated based on work papers for I.C.C.

[14]

Statement No. 2-58. The total for each commodity group was apportioned between the two groups of carriers on basis of the ton miles in each territory. Clerical expenses in connection with claim work was assigned by use of ratios. The cars, tons and revenue as settled on each of these sheets are from Witness Butler's Ex. A to V. S. No. 1.

Page 10 covers Products of Agriculture, (except citrus fruits and fresh or green vegetables, not frozen—Northbound), and I will explain this sheet in some detail as being representative of the following pages. After the number of cars and tons is shown the total out of pocket and constant costs, including 6% return on the net investment, for the Eastern District and Southern Region and a total of both. Next is shown the percentage of the total costs represented by each of the two territorial groups. This indicates that the costs for the Eastern Lines amount to 55.96 percent and those of the Southern Lines to 44.04 percent of the total. The cost of 6 percent return on the net investment follows and is deducted from the total costs leaving costs excluding Return. Revenue as settled is from the traffic exhibit previously referred to and divides 50.23 percent East and 49.77 percent South. On this basis the Eastern Carriers have an income of $157,613 out of revenue of $820,193 whereas the Southern Lines have an income of $290,971 out of $812,555 revenue. The next three lines

[15]

show that the incomes before return, if the revenue were apportioned on basis of costs, would be $913,686 and $719,062 for the East and South, respectively.

The next page (page 11) covers Products of Agriculture-Southbound and shows that whereas the Eastern District costs amount to 59.27 percent of the total costs, Eastern District receives only 50.21 percent of the total revenue as settled. This results in an income before return on investment of $81,737 for the Eastern District with the Southern Region receiving a rate of return of 26.5 percent.

I would like to point out that certain pages such as pages 12, 15, 18, etc. show that they are summaries of preceding pages. In these cases the basic figures of costs and revenues have been accumulated from the designated pages. One of the summary pages (page 28) covers all the Northbound traffic with page 29 covering all the Southbound traffic. The next page (page 30) covers all traffic both Northbound and Southbound. Here again the percentage of the costs borne by the Eastern Lines of 48.78 percent is greater than the proportion of revenue (45.44%) received by them. It can also be seen that while the Southern Lines received 26.5 percent Return on Net Investment, the Eastern carriers received only 18.2 percent.

[16]

At page 31 of this exhibit I have inserted a revised page which shows a distribution of the revenue on the basis of total costs as distinguished from the showing at the bottom of page 30 which accumulates the revenue from the several blocks of traffic on the basis of the relative costs for those respective blocks.

My next exhibit, Ex. D to V. S. No. 3 prices out the traffic in Witness Butler's Ex. B to V. S. No. 1, using the same unit cost factors as are shown at page 1 of my

previous exhibit No. C to V. S. No. 3. As will be noted from page 2, which shows the total of all traffic both Northbound and Southbound, the Eastern percentage of costs is 34.62 percent.

Exhibits C and D price out the traffic involved on Eastern District costs rather than on costs including those of the Pocahontas Region as Pocahontas Region costs reflect a special situation which is generally recognized as not indicative of the costs to Official territory lines of handling such traffic.

(Verification omitted in printing.)

VERIFIED STATEMENT NO. 4 OF JAMES M. SYMES.

(Dated October 1, 1959.)

My name is James M. Symes. I have been associated with the railroad industry for over forty years, mostly in the Operating Department. I am now President of The Pennsylvania Railroad Company.

That part of the National Transportation System which is represented by the Eastern railroads is being severely damaged by a lack of sufficient revenue. This injury manifests itself in such important respects as the following:

1. Inability to make sufficient expenditures for the proper maintenance of these railroads.
2. Inability to make essential expenditures for capital improvements.
3. Insufficient earnings to compensate their stockholders properly and to maintain the value of the capital invested in the properties.

These and other facts relating to the insufficiency of the earnings of the Eastern railroads and the effect thereof on the public interest in a sound transportation system in the most populous part of the country will be illustrated by the facts which are set forth below in this statement and in the accompanying exhibit.

The lines of The Pennsylvania Railroad Company cover a large part of the northeastern section of the United States. We have East-West lines from the eastern seaboard to Chicago and St. Louis and a number of important North-South lines, including those which serve the Ohio River crossings at Louisville and Cincinnati, and the line which runs from Potomac Yard, near Washington, D. C.,

[2]

to New York. We have a line as far north as the Straits of Mackinac, and as far south as Norfolk, Virginia. We also, of course, have a large number of other lines, serving most of the important points and a great many smaller towns and cities in the thirteen states and the District of Columbia, through which the lines of our railroad run. In serving this large and populous area, we encounter most of the conditions which are met by the Eastern railroads in general.

Page 1 of my exhibit summarizes the income and rate of return of The Pennsylvania Railroad Company in past years and demonstrates the unfavorable trends in the earnings of that company. Net income has seriously declined and is at an extremely low level. The rate of return has been reduced, correspondingly, to levels that are far below reasonable. This unfavorable earnings experience of the Pennsylvania has been shared by Eastern railroads in general.

Pages 3 through 7 of my exhibit show the annual gross capital expenditures for road and equipment since 1925, stated in terms of both current and 1957 constant dollars, first for all U. S. Class I Railroads and then separately for Eastern District, Eastern District including Pocahontas, and Southern carriers, and individually for the Pennsylvania Railroad. These pages reflect the fact that, because of their much lower net income and rate of return, the Eastern railroads have been seriously handicapped in their ability to devote funds to capital improvements as compared to the carriers of the Southern District.

[3]

If we take only the recent years, say from 1950 on, it will be found that the Southern roads have fared far better in this respect than the Eastern roads. The same is true if

we go as far back as 1940. The capital expenditures of the 5-year period 1925 through 1929 are employed as an average base for the construction of indices. Those were prosperous years in which the railroads made large capital expenditures. In 1958, the railroads of the Eastern District made capital expenditures that were only 54.3% of the average dollars spent for capital expenditures between 1925 and 1929. The Southern roads, however, were able to spend 19% more in 1958 than in the 1925-29 period. Having in mind the tremendous depreciation in the value of the dollar since the base period, the exhibit also states the expenditures in terms of dollars of constant value. On this basis, the Eastern District lines spent only 22.2% as much in 1958 as in the period from 1925 to 1929, while the Southern lines spent over 50% as much as they spent in the earlier period.

I show on Sheet 7 of my exhibit similar expenditures by the Pennsylvania Railroad. It can be seen that the trend for that company has been generally the same as that of the Eastern District as a whole.

Expenditures for capital improvements can be made only from funds that are available therefor, generated both within the company and, as to some improvements, from outside sources, all in

[4]

the light of the many demands on those funds and the ability of the company involved to meet its various requirements.

Pages 8 and 9 of the exhibit show the comparative situation of the Eastern and Southern lines with regard to equipment maintenance. The weakened earnings position of the Eastern railroads has made it necessary that they reduce expenditures for the maintenance of their freight cars to such an extent that, as of August 1, 1959, 14.3% of the cars owned by the railroads of the Eastern and Allegheny Districts (using the Association of American Railroads' classification) were undergoing or awaiting repairs (Page 8). As further shown on page 8 of my exhibit, for the Eastern

Allegheny and Pocahontas Districts together, the figure was 12.1%. For the railroads of the Southern District, it was only 5.3%. A reference to the exhibit will disclose that throughout the entire period since January, 1950, the bad order situation was substantially worse on the Eastern roads than on the roads of the Southern District.

The necessity of conserving cash at the expense of maintenance is manifested, of course, even in the figures of the Southern roads. Thus, their bad order percentage rose from 3.7% in October, 1957, to 4.8% in October, 1958. The Eastern percentage, however, rose from 7.0% to 14.7% and, including the Pocahontas, it rose from 5.7% to 12.3% in the same period. Attention is also directed to the more severe and prolonged effects of the relatively brief economic recessions of 1954 and 1958 upon car maintenance on the Eastern carriers

[5]

as contrasted with the much less severe effect of such business slumps upon the Southern District railroads.

What I have said with respect to freight cars is true also of locomotive maintenance. This is demonstrated by page 9 of my exhibit. Considering diesel units alone, the bad order ratio of the Eastern lines rose steadily over the years shown and stood at 6.3% (6.2%, including Pocahontas) as of July 1, 1959. This is to be compared with 3.1% for the Southern District on the same date. Combining the figures for both diesel and electric locomotives, we find that in the East (including the Pocahontas Region) 6.7% of the units were in or awaiting shop repairs as of July 1, 1959; while in the South the percentage was again only 3.1%.

The problem of recurring car shortages during the postwar period has been a serious one for the railroads, the shippers and the Commission. There is no question but that the public interest in a sound, strong National Transportation System adequate to meet the requirements both

of the peacetime economy and national defense is seriously impaired by a lack of sufficient cars, in good order, when they are needed. But if certain railroads must continue to exist on a marginal basis, as the Eastern railroads have existed in recent years, there is no choice but to perpetuate the policy which has been pursued in the past and which has resulted in a steady increase in the number of bad order cars, accentuated during each period of recession. It is a simple matter of basic economics that, without the

[6]

necessary funds, cars cannot be kept in proper repair. And this, of course, is equally true of locomotives.

The same fundamental principles apply also to the maintenance of fixed properties. Here again, the properties of the Eastern lines have suffered far more than those of the railroads of the Southern Region. This is illustrated by pages 10 to 13 of my exhibit, which show replacement of crossties and rail in recent years. Reference to page 12 will show that, using as a base the years 1950 to 1953, which were fairly normal years for maintenance, new rail laid in replacement by the Eastern District lines was reduced from an index of 100 to about 57% in the next two years, slightly under 50% in 1956, 48.7% in 1957, and down to 21.2% in 1958. Inclusion of the Pocahontas lines does not substantially change the ratios. The lines of the Southern Region, however, were able to keep the tons of new rail laid in 1954 and 1955 at 101.2% and 91%, respectively, and in 1957 at 80.7%, of those laid in the '50 to '53 period, and they fell but to 49.8% in 1958. The lowest index figure of the Southern lines for the nine years shown was 49.8% in 1958, as compared with 20.5% in that year for the Eastern District roads, including Pocahontas.

These pages of the exhibit also express the foregoing crosstie and rail replacement figures in relation to gross ton miles and miles of track maintained. The relative situation

of the Eastern and Southern roads, however, is unchanged by comparison in this manner. The exhibit also shows (page 13) that the Southern roads

[7]

did far better in the installation of fit (second hand) rail than did the Eastern lines.

Exhibit pages 10 to 13 also show the rail and tie renewal figures for the Pennsylvania Railroad. Although somewhat low, the years 1950 through 1953 may be taken as reasonably normal years for us in the laying of new rail and in tie renewals. As the exhibit shows, we were able to install in 1958 only 14.1% of the new rail installed in the '50 to '53 period, and in 1959 our program calls for only 11.75%. Similarly in 1958 we were able to renew only 42% of the average number of ties that were renewed in the 4-year period—1950 through 1953—while for 1959 our program calls for only 35.28%.

We are now endeavoring to cope, to the extent possible, with the freight car problem through a program which involves the assumption of additional obligations in large amount. During the 14-month period, beginning with January 1, 1959, the Pennsylvania is carrying forward a freight car program involving 23,500 new cars in replacement of a like number which are being scrapped.

The financing of this car program has been arranged through conditional sales and long-term leases—mostly the latter. The cost of the equipment is approximately $215 million and the carrying charges (including both debt and lease obligations) will average about $16 million annually. In addition to this, we had planned to spend in 1959 $53,500,000 on our regular freight car maintenance program, but unfortunately have had to cut that program

[8]

down because of the effect of the steel strike on our earnings.

The effect of this program will be a large increase in serviceable cars but, even when it is completed, about 15% of our equipment will still be unserviceable. And the program is being accomplished by adding $16 million of annual carrying charges which must be met regularly, on specific dates.

I should like to point out that it would have been impossible to make the capital improvements that we have made in the postwar period, including the period since the last hearings in this case, without large sums of money that were made available by the sale of assets which we had held for many years, assets such as the Hotel Pennsylvania in New York, our stock in the Pennsylvania Greyhound Company, valuable real estate in Pittsburgh and Philadelphia, water companies and other like assets. The sale of these assets provided us with $110,800,000 in the period from 1948 through 1958. Obviously, a railroad cannot long—and should not have to—rely upon these sources of funds in substitution for funds which, to a very large extent, should come from earnings.

The traffic originated by the Eastern lines is subject to much more severe fluctuations than that of the Southern lines. This is shown by the figures and charts on pages 14 to 17 of my exhibit, which relate to freight revenue and cars of revenue freight loaded by weeks in the years 1957, 1958 and 1959. Taking the effect of the

[9]

current steel strike on carloadings as an example, the figures show that, comparing the last five weeks shown (i.e., the weeks ending August 15 through September 12, inclusive) with the five weeks immediately preceding the week in which the steel strike began (i.e., the weeks ending June 13 through July 11, inclusive), the carloadings of the Eastern District lines show a decline of 29.2%, those of the East including Pocahontas 23.7%, but those of the Southern Region increased 2.9%.

Our margin of profit is so thin that when these large downward fluctuations come it is necessary to reduce expenditures wherever possible. This, in nearly all instances, means substantial reductions in maintenance expenses. Time after time, during the postwar period, it has been necessary for us to curtail maintenance programs, with the result that when business comes back there is a car shortage. Our total force reduction on the Pennsylvania, because of the present steel strike, comes to 9400 employes. Our situation is not an isolated one in this regard. It is typical of the Eastern railroads in general.

On page 18 of my exhibit I have compared the present situation of stockholders who invested $5,000 in each of three principal Eastern lines in 1925 with that of stockholders who made a like investment in three principal Southern lines in that year, both sets of carriers being important in the North-South traffic. Neither group includes any railroad which went through bankruptcy. A glance at the exhibit will show how much better off are the stockholders who invested in the Southern group of railroads.

[10]

Thus, the value of the stock purchased in the Eastern lines for a total of $15,000 has declined to $5,736.62. The present value is only 38.2% of the amount invested. But the $15,000 invested in the Southern roads has a present value of $24,821.97, an increase of 65.5% over the amount invested. (The average market price for the eight months of 1959 is here used as present value.)

The dividends received from the investment in the Eastern roads would have been reduced from $999.05 (in the period from 1925 through 1929) to a low of $116.15 in the last five years, and a high of $417.14 in the later period. In contrast, the dividends received from the investment in the Southern roads would have increased from $846.43 in the base period to a low of $892.10 and a high of $1,245.60 in the last five years. In 1958 the investment in the East-

ern roads would have returned dividends equal to only 11.6% of the dividends received in the base period. In the same year, the investment in the Southern roads would have returned 147.2% of the dividends received in the base period.

The exhibit also shows what would be the result of including figures for the Chesapeake & Ohio, as representing the Pocahontas Region. Even including that carrier with the Eastern District roads, the relative situation of the one who invested in the Southern lines would be far better than the one who invested in the other carriers.

The Pennsylvania Railroad has paid a dividend in every

[11]

year since 1848. The payments in each of those years are shown on page 19 of my exhibit. I call attention to the fact that in recent years the payments have been far lower—generally less than half as much—than the amounts previously paid. In 1958, the dividend was only 25 cents per share, the lowest of any year since we began paying dividends in 1848.

In addition to those Eastern railroads that did not pay any dividends on their common stock in 1957, 1958 or to date in 1959, a large number of railroads which did pay dividends in 1957 passed them or materially reduced them in 1958. This is shown on page 20 of my exhibit, from which it will be seen that 20 Eastern railroads either reduced or passed their dividends last year.

It is most important to the Pennsylvania Railroad that any increase in divisions justly due to it shall be promptly determined so that the money to be produced thereby will begin to accrue to it for the many needs which it has for such funds in the public interest. One of these needs is to meet heavy maturities which are due between now and 1965, inclusive. These are tabulated on pages 21 to 23 of my exhibit. Those pages show that, between the end of

1958 and the end of 1978, the Pennsylvania's maturities, with interest to be paid thereon, amount to over $1,095,000,000. The funds that would accrue to us through the increased divisions to which we believe we are justly entitled would

[12]

be a real and substantial help in meeting these large maturities. And equally important, of course, such divisions would contribute needed funds for maintenance of equipment and roadway and the undertaking of capital improvements, all of which would enable the Pennsylvania Railroad and other Eastern carriers to improve their transportation service in the public interest.

DIVIDENDS PAID BY THE PENNSYLVANIA RAILROAD COMPANY

The Pennsylvania Railroad Company has paid a cash return to its stockholders in every year, beginning with the first payment in May, 1848. The first installment on subscriptions to the capital stock of The Pennsylvania Railroad Company was paid to it in April, 1847. In May, 1848 the Company began the payment of interest on stock subscriptions at the rate of 6% per annum, and similar payments were made in each year until November 1, 1855. Payments designated as dividends have been made in every subsequent year. Allotments of Capital Stock have been made at various times since 1864 at issue prices which resulted in valuable rights on the outstanding stock.

VERIFIED STATEMENT NO. 5 OF ALFRED E. PERLMAN.

(Due Date: October 1, 1959.)

[1]

My name is Alfred E. Perlman. I am President of The New York Central Railroad Company. I started working for railroads at the age of 15 and since graduation from college have been associated with the Northern Pacific, the Chicago, Burlington and Quincy, and the Denver and Rio Grande Western. I was elected President of the New York Central on June 14, 1954.

The Central has an imperative need for increased revenues, as I shall explain. A comparative indicator of a railroad's revenue and financial condition is its rate of return on investment. Last year Central earned less than $12-million in net railway operating income on an investment in transportation plant and equipment of just under $2-billion, for a return of sixty-one hundredths of one percent. Exhibit No. 1, attached hereto, shows that from 1930, except for the war years, our rate of return exceeded 3 percent in only two years. Because of our very poor recent earnings, we have not paid a dividend to our stockholders since 1957.

Central's low earnings have been directly reflected in its credit rating. We have been unable to secure, at reasonable terms, the capital necessary to keep our operations abreast of rapidly changing technology and service requirements.

[2]

Whereas our average annual capital expenditure for the 1947-1957 period was close to $83-million, my Exhibit No. 2 shows that in 1958 our capital expenditures dropped to a low of $18-million, with capital expenditures for 1959 continuing at about the same low level. This is alarming because the changes in technology have been such and are continuing at such a pace that the Central should be spend-

ing for improvement and modernization at a much greater-than-average rate.

In the last three years we have had to delay or curtail important capital projects which were badly needed, for example, the installation of centralized traffic control on the tracks between Cleveland and Toledo, Ohio, at a proposed cost of $3.7-million, because money just was not available to permit this expenditure. Our entire yard building and centralized traffic control program has been seriously delayed for the same reason.

In June of this year Central found it necessary to apply to the Interstate Commerce Commission, in Finance Docket No. 20689, for an "additions and betterments" loan guaranty of a $40-million loan. The application was made pursuant to Part V of the Interstate Commerce Act, Section 504, which imposes as a condition to a guaranty of such loans that the Commission find that—

[3]

> "the carrier would be unable to obtain necessary funds, on reasonable terms, for the purposes for which the loan is sought;"

In view of this requirement, the decision to seek the loan guaranty was not easily made. It is obvious that an admission by a carrier that it cannot otherwise obtain necessary funds on reasonable terms can do serious damage to its credit standing. Nevertheless, because of the great need for additional funds, we felt impelled to make the application which was approved in Finance Docket No. 20689 on September 16, 1959.

In the immediate future Central is faced with an extraordinarily heavy schedule of fixed obligations which must be paid. Exhibit No. 3 shows that in 1960 Central will pay over $74-millions in fixed charges and maturities. In 1961, the figure will reach $89-million; in 1962, $98-million, and in 1963, $75-million, for a total of over $338-million in the 1960-1963 period. With a favorable bond

market, we believe that we can refinance $10-million of our 1960 obligations, and $12-million of our 1961 obligations. This will leave us with about $316-million in fixed charges and maturities for the four-year period beginning January 1, 1960. At our present level of earnings we are going to find that the satisfaction of these obligations will impose critical restrictions upon our finances in other areas.

Our financial problem has been influenced by a multitude of factors, many of which have borne upon the industry

[4]

generally, but which have fallen with particular severity upon the Central due to the urban nature of the territory which the Central serves and the intricate complex and variety of services which the Central must maintain in order to support its markets and production areas.

Inflation, for example, has hit all railroads, but it has hit the Central particularly hard; first, because of its high proportion of passenger service, which involves a relatively high labor factor and, second, because of its abnormally large proportion of terminal operations. This latter is demonstrated by the fact that the New York Central, in 1958, operated 3.015-million freight yard switching locomotive hours in comparison with 1.309-million freight train hours, a 2.30 ratio, whereas the railroads in the Southern Region operated 5.264-million freight yard switching locomotive hours versus 3.447-million freight train hours, a 1.53 ratio. Although the diesel unquestionably has reduced the cost of locomotive operation per engine hour in both yard and road service, it has not greatly improved the productivity in terms of cars handled per engine hour in either the North or the South, whereas in road service the diesel locomotive has immeasurably improved trainload and gross ton miles per train hour both for the northern and the southern railroads. Thus, the lines in the North, and the Central in particular, have not had the opportunity to ameliorate the impact

[5]

of inflation upon their operations due to their larger volume of terminal services as have the lines operating in the South with their greater proportion of line-haul services.

Similarly, while many railroads have been subjected to increased highway competition through the development of improved thruways or expressways, few railroads in the country have been subjected to this form of competition to the same extent as Central. Our railroad is faced with a thruway or expressway which parallels its main line through the entire states of Massachusetts, New York, Ohio, and much of Indiana. It is, therefore, not surprising that, although the railroads in the South throughout the years 1946-1958 have experienced substantially no diminution in their volume of traffic when measured in terms of gross ton miles, the Central, in common with the eastern lines in this period, has suffered a substantial decrease in volume. This is shown by the following table:

[6]

Gross Ton Miles—Freight

Year	*New York Central*	*Eastern District (incl. Poco.)*	*Southern Region*
	Freight Gross Ton Miles	*Freight Gross Ton Miles*	*Freight Gross Ton Miles*
	(000)	*(000)*	*(000)*
1946	97,431,743	568,795,783	191,026,122
1947	102,176,777	619,522,344	202,682,110
1948	97,888,767	594,361,549	199,044,135
1949	84,217,772	488,538,141	173,937,628
1950	92,083,904	535,221,332	192,436,490
1951	94,603,822	575,042,545	203,428,344
1952	88,230,831	536,304,356	200,757,837
1953	89,476,960	534,398,645	198,354,929
1954	78,963,966	475,534,187	189,337,479
1955	88,667,820	549,429,400	201,596,901
1956	86,588,990	573,888,298	207,193,369
1957	80,185,378	553,399,276	198,804,175
1958	70,103,892	463,388,138	187,967,764

This fact has limited the opportunity of the eastern lines and the Central to minimize the impact of inflation, whereas the increased or relatively constant volume in the South has enlarged the opportunity of the railroads serving this area to deal with such problems because it has permitted a greater utilization of the improved technology in railroading which has been afforded in this period. For example, the Central has invested in several large electronic yards at the cost of many millions of dollars which would be expected to materially reduce its cost of switching. But these yards under present traffic levels are only handling about one-half their designed capacity, with the result that

[7]

although the Central has kept well abreast of the changing railroad technology, it is not realizing, and under present traffic conditions, it cannot realize its full benefits. Had we enjoyed the same relative traffic volume (i.e., approximately 100-billion gross ton miles or approximately 4,600,000 cars handled) enjoyed by the Southern lines, we would be receiving a handsome return on these investments in the form of reduced unit costs which would enable us to better offset effects of inflation upon wages and materials.

In addition, the Central, in serving its highly urbanized territory, is faced with the necessity of maintaining, under present regulatory requirements, a substantial volume of passenger service, including communtation service, which has produced deficits in the post-war era beginning with 1947, ranging from $30-million to $54-million annually. These deficits have absorbed between 34 and 73.7 percent of the railroad's freight net operating income or an average of 52.2 percent for the period. (See Exhibit No. 4.) We are told repeatedly by the state agencies in New Jersey and New York that such services are essential to the existence of metropolitan New York. This is the same metropolitan New York that consumes substantial quantities of southern products, such as perishables and lumber. When

expected to provide us with the funds, required to continue the modernization program which is essential to our survival; neither has our Other Income been sufficient to maintain our credit at a point where funds could be generated from outside sources at reasonable rates to continue our modernization program. Thus, it is imperative that the Central receive from its railroad income sufficient to not only satisfy the expense of operation, but also to generate the funds or credit necessary to continue the modernization and debt retirement programs which are vital to the continuance of the Central as a financially dependable and satisfactory partner in the interterritorial service which it affords with its connections.

(Verification omitted in printing.)

we sought to discontinue the West Shore segment of commutation service, we were forced to include in our presentation

[8]

before the State Commission a statement of our freight earnings, as well as our passenger earnings, because in the view, at least of state regulatory bodies with which we have to live, there is an intimate tie between the two services which relate to a common market. Yet, the earnings which we have been receiving on freight traffic have not been sufficient to absorb the passenger deficit and maintain the Central in a healthy financial condition.

More recently, the Central and other eastern lines have been faced with a new form of competition, namely the St. Lawrence Seaway, which has exposed a substantial proportion of the Central's total traffic to competition from not only low cost foreign tramp steamships, but also from American steamship lines, which are subsidized by the Federal government to meet such low cost competition. As a consequence, the Central and the other eastern lines have had to make substantial rate reductions on important commodities. Central is in the process of making reductions on other important commodities moving intraterritorially within the East and moving to export through the North Atlantic ports. These commodities have up to now borne a much greater share of the total cost of maintaining the complex of rail service which the Central must maintain in order to serve its territory than they can be expected to bear in the future. This is illustrated by the following table of commodities which have suffered rate cuts to meet Seaway competition.

[9]

These statistics have been compiled from the Bureau of Accounts, Cost Finding and Evaluation's Statement 2-59, *Distribution of Rail Revenue Contribution by Commodity Groups—1957*, based upon the 1 percent waybill study.

OFFICIAL TO OFFICIAL TERRITORY—1957.

No.	Commodity	Carloads	Revenue (Dollars)	Contribution (over O.P. Costs) (Dollars)	Ratio of Revenue to O.P. Cost
001	Wheat	899	222,174	59,736	137
003	Corn	2,183	594,154	204,600	153
007	Oats	265	57,598	13,049	129
009	Barley & Rye	188	46,501	8,600	123
043	Soybeans	834	198,831	103,553	209
	Totals	4,369	1,119,248	389,538	
900	Products of Agriculture	8,362	1,916,187	373,475	124

All of these factors add up to the necessity for the Central's receiving from its traffic, particularly its interterritorial traffic, increased revenue if the Central is to maintain the financial position necessary to continue to service the interterritorial traffic as it has in the past. We have done and are doing everything within the limits of the number of dollars available to modernize our plant, reduce our costs, and

[10]

maintain efficient service. However, as the financial record indicates, the cost of inflation in relation to our operating conditions and the impact of competitive factors have more than offset our best efforts in this respect, with the result that the Central did not receive in 1958, and probably will not receive in 1959, revenue from its railway operation sufficient to pay its total costs. In short, the Central's Other Income has kept it solvent in the last two years as it has in 9 of the 13 post-war years. Although our Other Income to date has proven sufficient to keep us out of the red, it has not provided us with the funds, and cannot be

THE NEW YORK CENTRAL RAILROAD COMPANY

VERIFIED STATEMENT NO. 6
OF JOHN I. BARNES

(Verified September 29, 1959)

[1]

My name is John I. Barnes. I am Comptroller of The Baltimore and Ohio Railroad Company, with headquarters at Baltimore, Maryland.

This statement is made on behalf of The Baltimore and Ohio Railroad Company in support of petition of Eastern Railroads for an increase in divisions on traffic moving between Official and Southern territories.

The Baltimore and Ohio is an important part of the Official Territory railroad system which serves the densely populated and highly industrialized Official Territory. It is an integral part of the transportation system of the country which is essential to the public interest. It serves thirteen states and many large and populous cities, which depend on it for transportation service adequate to meet the needs of commerce as well as the national defense. Its healthy financial and economic state, so necessary to continue to provide adequate service, depends on sufficient earnings from the service it performs.

In the thirteen years since the end of World War II, the earnings of the Baltimore and Ohio have been inadequate to provide sufficient funds to permit it to keep up with technological advancements and modernization, including necessary replacements; improve its cash position, and give its owners, the stockholders, a fair return on their investments in the property they provide for public service.

Exhibit A shows the net investment of the Baltimore and Ohio in property devoted to transportation service, net railway operating income, and rate of return in each of the

years 1946 to 1958, inclusive. The return earned by the Baltimore and Ohio on its net investment in those years ranged from a high of 4.4% in 1948 downward to a low of 2.61% in 1958. The

[2]

average return over those years was only 3.56%. Present indications are that the return in 1959 will be even lower than the extremely poor result of last year.

Exhibit B is the record of Current Assets (excluding materials and supplies), Current Liabilities and Net Working Capital as of December 31 in each year 1946 to 1958, and as of July 31, 1959. Net working capital of the Baltimore and Ohio, excluding materials and supplies, December 31, 1946, was $38,862,386. By the end of 1957 it had been entirely wiped out and there was a *deficit* of $3,366,723. As of July 31, 1959, net working capital was $13,364,997—only one-third of what it was December 31, 1946—and much too small to provide for our needs.

Lack of funds has prevented the Baltimore and Ohio from making capital expenditures which would provide better transportation service and enable it to maintain and improve its competitive position. An outstanding illustration of this situation is the new modern yard at Cumberland, Md., estimated cost $15 million. It is expected that this new facility, if and when completed, would enable us to move traffic more expeditiously and establish schedules that would provide shippers and receivers with as good or better service than our competitors. Construction work on this yard began October 10, 1956 but was suspended February 1, 1958 after $6 million had been expended and the project about one-third complete. We need $9 million to finish it, but we simply don't have it now for that purpose. Until the necessary funds are available from earnings, construction cannot be resumed and meanwhile we are being deprived of the advantages.

There are many other improvements that should be made in our plant

[3]

to keep the railroad up to date and meet the transportation service requirements of our shippers and receivers. They include reduction in grades, elimination of clearance restrictions, reconstruction of bridges, new retarder yards, Centralized Traffic Control, improved freight station facilities, piers and warehouses, improvements in interlocking signals, communications, etc. We also need new roadway and shop machinery and tools. Many of our older freight train cars should be replaced, and a number of new ones, specially equipped to handle certain commodities, should be acquired. These are not transitory requirements but are of a continuing nature.

Inability of Eastern roads to maintain their competitive position not only adversely affects them but also their connections serving other territories. The loss of traffic originating or terminating in the East and moving between points in the South or West will reduce the volume of rail traffic of the roads in those territories. On the other hand, ability of Eastern roads to provide transportation service which attracts increased traffic or discourages diversion will produce additional traffic for Southern and Western roads to and from the populous Official Territory. Therefore, the economic well-being of Eastern roads for such reason, if for no other, is of much importance to the roads in other territories and inures to their benefit.

The Baltimore and Ohio, like most other Eastern roads, has been forced to sharply curtail its equipment maintenance program because of inadequate earnings. During the period 1946 to date, the number of unserviceable freight cars of the Baltimore and Ohio rose from 4.1% in 1946 to 22% in 1959. At the end of 1950, the percent of unserviceable freight cars

[4]

to ownership was 7%; at the end of 1951 it was 5.2%. Compare these figures with the 22% in September 1959. As of September 30, 1959, there were about 21,000 freight train cars in unserviceable condition on the B&O, or 22% of ownership. Obviously, this contributes to car shortages, which create serious situations for the public and the railroads. To bring the number of B&O unserviceable freight cars down to a fairly normal figure of 4,600, or 4.8% of ownership, by the end of July 1960 would require the expenditure of $19 million between October 1, 1959 and July 31, 1960. This would, of course, be in addition to the cost of currently maintaining the balance of the fleet in serviceable condition.

Locomotive maintenance too has suffered from lack of funds. At the end of September 1959 the Baltimore and Ohio had 156 diesel units, or 13% of its fleet, in or awaiting shop for repairs. To reduce the number of unserviceable units to 8% by July 1960, would require the expenditure of $8.7 million, which would be in addition to the cost of keeping the remaining units serviceable.

So, to reduce bad order freight cars and diesel locomotive units to more normal levels between October 1, 1959 and July 1960, would cost the Baltimore and Ohio roundly $28 million. Unless additional revenue is forthcoming to provide that sum, it is extremely doubtful that such a program could be accomplished.

The bad order car and locomotive situation on the Eastern roads is much more unfavorable than on the Southern roads. As of August 1, 1959, unserviceable freight cars in the Eastern District, excluding the Pocahontas

[5]

Region, represented 14.3% of ownership; in the South the figure was 5.3%.

Roadway maintenance on the Baltimore and Ohio has also been sharply curtailed. Exhibit C shows the quantities of rail, ties, and ballast applied in maintenance during each of the past six years and the quantities which, in the opinion of our maintenance officers, should have been applied had our earnings been adequate to perform what they consider to be normal maintenance. The curtailments so clearly indicated by these figures were due to only one cause—insufficient earnings. The labor and material were available, but we simply didn't have money enough to purchase them.

Our bridge maintenance program is far behind schedule. To bring it up to date over the next five years would require the expenditure of $10.6 million, or an average of $2.1 million per annum. This includes $646,000 for painting, which has been deferred for a longer period of time than it should have been to properly protect the structures so as to avoid greater repair costs later.

Realizing that substantial aid in meeting the constantly increasing costs could be obtained from mechanizing some of our roadway maintenance work, but not having the funds with which to purchase the necessary equipment, arrangements were made early this year to acquire under lease a number of roadway maintenance machines. Only because we were able to rent this equipment, are we obtaining the benefit of this mechanization.

The unsatisfactory earnings of the Baltimore and Ohio cannot be attributed to inactivity of management or failure to avail of technological advances to the extent possible. Being fully aware of the necessity to find ways to offset the increasing costs, every effort, consistent with the

[6]

resources at our command, has been exerted to meet our problems and improve the property and efficiency of service. From 1946 to 1958 the Company invested a total of $470 million in improvements to road and equipment, an average of $36 million per year. Of the total, $309,258,560 was expended for equipment. The table below shows the figures by years:

Year	*Road*	*Equipment*	*Total*
1946	$ 12,535,514	$ 12,578,973	$ 25,114,487
1947	16,642,829	43,266,582	59,909,411
1948	14,915,984	43,728,392	58,644,376
1949	9,556,787	12,671,792	22,228,579
	$ 53,651,114	$112,245,739	$165,896,853
1950	$ 10,334,816	$ 14,160,658	$ 24,495,474
1951	14,089,753	22,342,736	36,432,489
1952	11,805,896	26,400,351	38,206,247
1953	10,455,447	25,171,145	35,626,592
1954	11,431,933	7,581,521	19,013,454
1955	10,301,763	12,687,636	22,989,399
1956	9,953,024	26,911,148	36,864,172
1957	16,265,194	37,004,588	53,269,782
1958	12,262,017	24,753,038	37,015,055
	$106,899,843	$197,012,821	$303,912,664
	$160,550,957	$309,258,560	$469,809,517

These expenditures were financed by borrowing on equipment—our only source of credit; by depreciation, which, because of inflation, was far short of the amount needed to cover replacement costs, and by such portion of our inadequate net earnings as could be allocated for that purpose. Oustanding equipment obligations rose from $47 million at the end of 1946 to $83 million as of December 31, 1949, an increase of 76%, and increased further to $96 million, or 28%, in the period 1950 to the end of 1958, a total increase of 104%, 1958 over 1946.

In 1946 the Baltimore and Ohio had only 136 diesel units—24 freight, 44 passenger and 68 switch. It now has a total of 1,130 units—

[7]

712 freight, 70 passenger and 348 switch. Of these, 569 units, or more than half, were acquired under lease because

we didn't have the money necessary to finance their purchase. Since March 1958 the operations of the Baltimore and Ohio have been completely dieselized.

To the extent of its financial ability, taking into account the discharge of other obligations to which it is committed, such as equipment maturities, sinking funds, etc., which have to be met, the Baltimore and Ohio has made certain roadway improvements, for example, installation of Centralized Traffic Control over relatively small segments of the line, modernization to a limited extent of several yards and certain signal and communication facilities in an effort to compensate for the higher costs. It is in these areas that so much more is needed, but they will cost a great deal of money, which we do not now have. We cannot finance, at reasonable rates and assured ability to repay loans, new yards, grade and curvature revisions, etc., by borrowing, as is possible in the case of new equipment.

Exhibit D shows the number of man hours required to produce 1000 gross ton miles in the Eastern and Southern Regions, excluding Pocahontas Region, by years, 1946 to 1958, inclusive. More man hours were required to produce 1000 gross ton miles in the East than in the South, reflecting the effect of the expensive physical, operating and terminal conditions, in the East. For the years 1950-1958 the figures compare as follows:

	Man Hours Required to Produce 1000 Gross Ton Miles	
	Eastern District	Southern Region
1950.....	2.229	1.762
1951.....	2.199	1.733
1952.....	2.165	1.692
1953.....	2.102	1.645
1954.....	2.024	1.573
1955.....	1.898	1.449
1956.....	1.832	1.406
1957.....	1.834	1.369
1958.....	1.744	1.279

[8]

The following comparison of freight expense per 1000 gross ton miles in the East and South is another indication of the lower operating costs in the South:

	Freight Operating Expense Per 1000 Gross Ton Miles	
	Eastern District	Southern Region
1950.....	$4.8770	$3.8265
1951.....	5.1943	4.1474
1952.....	5.3680	4.2441
1953.....	5.4462	4.2616
1954.....	5.3368	4.2041
1955.....	5.0846	3.9988
1956.....	5.2925	4.2162
1957.....	5.7145	4.4953
1958.....	5.7539	4.5209

The considerably lower operating ratios in the South is another such indication—

	Total Operating Ratio	
	Eastern District	Southern Region
1950.....	71.10	64.77
1951.....	71.97	66.58
1952.....	71.03	64.66
1953.....	70.73	63.50
1954.....	73.77	66.75
1955.....	70.49	64.26
1956.....	71.33	66.09
1957.....	73.65	68.73
1958.....	76.36	70.05

For fifteen years, 1933-1947, inclusive, the stockholders of the Baltimore and Ohio did not receive one cent of dividends. In 1948 a dividend of $1 per share was paid on the 4% Preferred stock. The record from 1948 to date is—

[9]

	Dividends Paid	
	4% Preferred	Common
	(Par $100)	(Par $100)
1948.....	$1.00	$—
1949.....	1.00	—
1950.....	4.00	—
1951.....	4.00	—
1952.....	4.00	0.75
1953.....	4.00	1.00
1954.....	4.00	1.00
1955.....	4.00	2.00
1956.....	4.00	2.50
1957.....	4.00	2.50
1958.....	4.00	1.50
1959.....	4.00	1.50

Note particularly that dividends on Common were not resumed until 1952, after a lapse of twenty years. The 1952 dividend was at the extremely modest rate of 75 cents per share, which was raised in small steps to $2.50—still quite modest—in 1956 and 1957. Because of the worsening financial situation, the Common dividend was reduced to $1.50 in 1958 and 1959.

The facts here presented are convincing evidence that the Baltimore and Ohio is in need of additional revenue and we urge the Commission to properly weigh that need when establishing divisions between the East and the South.

(Verification omitted in printing.)

VERIFIED STATEMENT NO. 7
OF CHARLES C. SHANNON

(Verified September 29, 1959)

[1]

My name is Charles C. Shannon and my office is located at 54 Meadow Street, New Haven, Connecticut. I have been employed by the New Haven Railroad since January 1, 1958, first as Operating Vice-President, and since November 1, 1958, as Executive Vice-President.

Prior to joining the New Haven, I was employed for approximately 22 years by the Chicago and North Western Railway, Chicago, Illinois. I started with that company in a clerical capacity and thereafter held positions of Trainmaster, Assistant Superintendent and Superintendent in the Transportation Department. I was also Manager of Station Services, which included the supervision of mail, baggage and express traffic. I also held the position of Assistant to the Operating Vice President and in such position made many cost studies of various operations. I was responsible for the setting up of improvement budgets for the railroad as a whole. I was also responsible for the investigation and development of new types of equipment and methods of performing work. Thereafter I was assigned as a General Superintendent of that railroad, having the responsibility for the operation of approximately 6,000 miles of railroad. After completion of this assignment I became General Manager of Passenger Services,

[2]

which included the operation of three heavily travelled suburban lines on the west, northwest and north sides of the City of Chicago. Eventually I became System General Manager in charge of the Transportation Department, covering the movement of all freight and passenger traffic. Prior to coming to the New Haven I was Assistant to the President-Operations.

Exhibit No. 1 is a map showing the location and extent of the New Haven System. It indicates the number of tracks between various points, kind of service operated, the stations served and the many injunction points with other railroads for the interchange of freight and passengers. This map incorrectly shows passenger service on the former Old Colony lines. Such service was discontinued on June 30, 1959, and at present no passenger service is operated on the lines between Boston-Greenbush, Boston-Plymouth, Boston-Hyannis, Buzzards Bay-Woods Hole and Attleboro-Middleboro via Taunton, all in southeastern Massachusetts.

The New Haven serves southeastern New York State, all of Connecticut and Rhode Island, and southern Massachusetts. This is an area of about 14,000 square miles, with a total population of about 15 million people according to the Census of 1950. The System serves directly 13 cities of 100,000 or over including New York City and Boston. The population per square miles in the area served is greater than anywhere else in the country except the District of Columbia and the State of New Jersey. Rhode Island ranks first among the New England states in this respect with 748.5 people per square miles, then follows Massachusetts with 596.2, and Connecticut with 409.7.

[3]

The New Haven Railroad is an important part of the economy of New England which is the oldest industrial area in the country. This area contains only 66,608 square miles. In contrast, the Southern Region, composed of the eight states of Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee consists of 383,167 square miles or approximately 5.75 times the size of New England. The major portion of the railroad industry in the New England Region is suffering from reduced earnings and inadequate returns on investment. This has occurred in spite of the fact that the population of the region has increased substantially during the past 20 years.

The table below shows population by states within and for the New England and Southern Regions for 1920, 1940, 1950 and 1959 with the percentage increases for each—1959 over 1920.

State	1920	1940	1950	Jan. 1, 1959*	% Change 59 v. 20

It will be noted that the population of the New England states increased 36.5% in 1959 over 1920, while the Southern states,

[4]

during the same period, show an increase of 58.9%. If the Florida increase were eliminated the percent of increase for the South would not be greatly in excess of that of New England.

While New England compares favorably with the Southern Region with respect to population changes, a comparison of changes in railroad tonnages handled in the two regions between 1936 and 1957 is decidedly unfavorable for New England. Tabulated below are the total revenue tons handled, tons originated and tons terminated for the two regions for the years 1936, 1940, 1946, 1948, 1950 and 1957.

In the tabulation, the following railroads are included under the caption "New England Region": Bangor and Aroostook Railroad Company, Boston and Maine Railroad, Central Vermont Railway, Inc., Canadian Pacific Lines in Maine, Maine Central Railroad Company, The New York, New Haven and Hartford Railroad Company, The New York Connecting Rail Road Company and Rutland Railway Corporation. These railroads are used for the New England Region in compiling the 1957 I.C.C. statistics. The Boston & Albany Railroad had been included in the New England Region up to and including 1948, but not thereafter, and the Canadian National Lines in New England and the Canadian Pacific Lines in Vermont were eliminated from the New England Region statistics by the I.C.C. in 1957. These lines have therefore been eliminated throughout the following table:

Year	New England Region		Southern Region
Total Revenue Tons			
1936	53,327,698		204,649,650
1940	57,156,310		235,405,755
1946	82,306,392		374,581,071
1948	80,120,099		420,392,849
1950	66,971,881		402,046,744
1957	63,421,762		444,393,979
% Change '57 vs. '36	18.9		117.1
% Change '57 vs. '48	20.8	(Decrease)	5.7
% Change '57 vs. '50	5.3	(Decrease)	10.5
Tons Originated			
1936	15,122,912		122,122,327
1940	14,985,105		136,375,282
1946	20,835,064		206,613,849

Class I Steam Railways in the United States.

[6]

From the preceding table it appears that while tonnage in all categories shown increased substantially in New England from 1936 to 1946, it thereafter declines precipitously to 1957. In contrast, the Southern Region shows a continuation of the upward trend through 1957.

Tons originated in New England in 1957 increased only 6.6% over 1936, but decreased 18.3% over 1948, and 4.0% over 1950, whereas in the Southern Region there were increases of 107.8%, 8.4% and 12.4% for those periods. Similarly, tons terminated in New England increased only 9.4% in 1957 compared with 1936, but decreased 18.9% compared with 1948 and 5.4% compared with 1950, while the Southern Region shows increases of 126.3%, 11.6% and 16.7% for the respective periods.

When the New Haven tonnage and revenue figures are compared with those of the Seaboard, Atlantic Coast Line, and Florida East Coast, the differences are even more pronounced. Exhibit No. 2 shows tonnage and revenue figures at five-year intervals from 1928 to 1958 inclusive for all four companies. The local tonnage, as well as the interline tonnage originating or terminating on the New Haven's line, show marked decreases whereas the tonnage for the other companies show very marked increases. The increase in freight revenue during this period for the New Haven is very small in comparison with the increase in freight revenue for the other companies.

Because of the short distances between population centers, railroad tonnage in the New England Region is extremely vulnerable to motor carrier competition.

New England, according to the 1950 Census, had 29

[7]

cities with more than 50,000 population in an area that is smaller than the combined states of Kentucky and South Carolina. Included among these 29 cities are 12 with populations exceeding 100,000.

City	Population	City	Population
Boston, Mass.	801,444	New Bedford, Mass.	109,189
Bridgeport, Conn.	158,709	New Britain, Conn.	73,726
Brockton, Mass.	62,860	New Haven, Conn.	164,443
Cambridge, Mass.	120,740	Newton, Mass.	81,944
Cranston, R. I.	55,060	Pawtucket, R. I.	81,436
Fall River, Mass.	111,963	Pittsfield, Mass.	53,348
Hartford, Conn.	177,397	Portland, Me.	77,634
Holyoke, Mass.	54,661	Providence, R. I.	248,674
Lawrence, Mass.	80,536	Quincy, Mass.	83,835
Lowell, Mass.	97,249	Somerville, Mass.	102,351
Lynn, Mass.	99,738	Springfield, Mass.	162,399
Malden, Mass.	59,804	Stamford, Conn.	74,293
Manchester, N. H.	82,732	Waterbury, Conn.	104,477
Medford, Mass.	66,113	Woonsocket, R. I.	50,211
		Worchester, Mass.	203,486

An example of the relatively short distances between large cities is shown below for the route between Springfield, Massachusetts and New York City.

(1950) Population	Mileage Between Cities	Springfield - New York	Mileage from Springfield
162,399		Springfield	
177,397	25.4	Hartford, Conn.	25.4
44,088	17.9	Meriden, Conn.	43.3
164,443	18.6	New Haven, Conn.	61.9
158,709	16.7	Bridgeport, Conn.	78.6
49,460	14.6	Norwalk, Conn.	93.2
74,293	8.0	Stamford, Conn.	101.2
40,835	4.9	Greenwich, Conn.	106.1
23,970	2.5	Port Chester, N. Y.	108.6
59,725	9.1	New Rochelle, N. Y.	117.7
71,899	2.8	Mount Vernon, N. Y.	120.5
7,891,957	13.8	New York, N. Y.	134.3

Source: Population: U. S. Bureau of Census
Mileage: N.Y., N.H., & H.R.R. Co. Timetable No. 8 (Employees')

[8]

Thus, in a short haul of 134 miles a motor carrier would pass through 10 cities, all but one of which exceeded

25,000 in population and five of which exceeded 150,000 in population. In fact, practically all of the traffic in New England is highly susceptible to motor truck competition due to the short distances between population centers, the good highways and the variety of the commodities produced in this area.

Consequently, motor carriers in New England handle a proportionately larger share of the total tonnage than do motor carriers in the Southern Region. For the year 1957, the Class I motor carriers in the New England Region carried 12.6% of the total tonnage transported by rail and truck. For the same year, the Southern motor carriers transported only 5.8% of the total tonnage transported by rail and truck.

[9]

Tons Transported by Class I Motor Carriers—Year 1957

	New England Region	Southern Region
Common Carriers of General Commodities	6,144,220	15,726,456
Common Carriers of Special Commodities	2,596,916	10,942,306
Contract Carriers	386,622	926,787
Total Tons	9,127,758	27,595,549
Total Tons Transported by Class I Railroads in 1957	63,421,762	444,393,979
Total	72,549,520	471,989,528
Percent of Tonnage Trucked to Total Transported by Rail and Truck	12.6%	5.8%

I.C.C. Freight Commodity Statistics of Class I Railways—Year 1957.

Another factor which has seriously affected the railroads in New England as compared with those in the South is the sharp change in the position of New England with respect to manufactures as compared with that of the South.

In 1939 New England's manufactures exceeded those of the South by 25% but by 1947 this margin had shrunk to 2% and at present New England is running more than 20% behind the South.

[10]

Value Added by Manufacture (000)

	New England	Southern States	Percentage N.E. Above or Below ( ) South
1939	$ 2,414,268	$ 1,932,493	24.9
1947	6,813,800	6,682,388	2.0
1957	10,640,000	13,602,000	(21.8)

Source: 1939, 1947—Bureau of Census, U.S. Census of Manufacturers. 1957—Annual Survey of Manufacturers.

In 1947 expenditures for new manufacturing plants were $188,196,000 in the South as compared with $115,151,000 in the New England states. In 1957 the investment in the South was $385,525,000, while in New England for the same year the investment was $176,523,000. The source of this information is U.S. Census of Manufactures, 1947: Annual Survey of Manufactures, 1957.

With such a trend in new construction it is not surprising that New England has lost the lead which it long had over the Southern Region in the production of manufactured goods.

The past half century has seen many of New England's plants move to other sections of the country or has seen branch plants built in other sections of the country so that New England's relative position in manufacturing has declined severely.

The New England area also suffers from water carrier competition to a large degree. One of the reasons for the

extent of water carrier competition is the geographical position of New England. It is naturally bounded for all

[11]

practical purposes on three sides by water: the Atlantic Ocean and Long Island Sound on the east and south, and the Hudson River on the west. To these natural water boundaries has recently been added the St. Lawrence Seaway in the north which is expected to increase water carrier competition for the New England railroads. Coastwise and intercoastal shipping from and to this section of the country is advantageous to shippers because of the existence of the three major ports of Boston, Portland and Providence, and the great abundance of smaller harbors all the way from Port Chester, New York on the Connecticut-New York line to Eastport, Maine on the Main-Canadian border. In New England nearly all cities of 50,000 or more population are within a very few miles of tidewater. Most of the traffic moving through these ports is trucked to or from interior points. The Port of New York has always been the outstanding port for commerce to and from southern New England. The Hudson River as far as Albany, New York, also serves a section of New England. It is a fair statement that it would be difficult to find another section of the country that is more subject to tidewater competition.

The factors enumerated above in large measure account for the very low rate of return presently being earned by New England railroads. Exhibit No. 3 shows such information by railroads and for the region as a whole for the years 1957 and 1958. It will be noted that in 1957, the New England Region had net railway operating income of $11,200,356, a return of 1.23 and a deficit in net income of $1,070,555. The same figures for 1958 were $3,256,584, 0.36, and a deficit of

[12]

$6,616,865. The source of this information is the statement issued by the Association of American Railroads entitled

"Property Investment and Condensed Operating Income Account."

The two largest railroads in New England are the New Haven and the Boston and Maine, in the order named. In 1957, out of a total of 63,421,762 revenue tons of freight transported by New England railroads, the New Haven transported 22,990,537 and the Boston and Maine 17,110,374, or a total of 40,100,911 tons. In the same year the New Haven earned revenues of $94,941,832 and the Boston and Maine $67,646,588, or a total of $162,588,420 as compared with $226,689,936 for the New England Region. The source of these figures is "Freight Commodity Statistics" issued by the Interstate Commerce Commission for the year 1957. It will be seen that the New Haven's tonnage and revenue were 36.3% and 41.9% respectively of the total, and the combined New Haven and Boston and Maine tonnage and revenue were 63.2% and 71.7% respectively of the total.

As shown in Exhibit No. 3 the combined New Haven and Boston and Maine average net investment and total operating revenue constitute a major portion of the total for the region. Thus it is clear that the operating revenues of the New Haven and the Boston and Maine have a very substantial effect on the overall results for the New England Region, and it is also clear that the New Haven is a very important part of the New England railroad system.

The New Haven's earnings have deteriorated seriously

[13]

during the past several years, particularly since 1954, as a consequence of which it has had to defer a substantial amount of maintenance, over and above that necessary to preserve safety of operation, and it has been unable to make necessary capital improvements, and of course, it has been unable to compensate its stockholders. It is greatly in need of additional revenues in order to provide funds for maintenance which can no longer be deferred, for capital improvements which are vitally necessary, and also to make some return to its stockholders. This need for additional revenue is demonstrated by the following exhibits:

Exhibit No. 4 is a Condensed Operating Income Account covering the years 1948 to 1958, inclusive. It also shows a comparison of the first seven months of 1959 with the same period of 1958. This exhibit demonstrates the alarming reduction in net railway operating income and net income since 1954.

Exhibit No. 5 shows net investment, net railway operating income and rate of return for the years 1948 to 1958, inclusive. It will be noted that in all these years the rate of return was never adequate, but beginning in 1955 it started dropping and vanished completely in 1958.

Exhibit No. 6 is a Condensed Operating Income Account—Freight Service for the years 1948 to 1958, inclusive, and demonstrates the drop in freight earnings since 1955.

Exhibit No. 7 is a Condensed Operating Income Account—Passenger and Allied Service, for the years 1948 to 1958, inclusive. It shows the fairly steady increase in the

[14]

New Haven's passenger deficit to and including 1957. A substantial reduction in the deficit was accomplished in 1958, brought about by stringent economies and also by reducing maintenance as far as possible without affecting safety. It is doubtful that this reduction in the deficit can be held in 1959 because of the need to perform maintenance work which can no longer be deferred. However, every effort is being made to reduce passenger losses as far as possible, by seeking authority to discontinue unprofitable trains, on the one hand, and on the other, by seeking increases in fares to the extent permitted by competition. The dense population of the area served by the New Haven requires a substantial amount of passenger service, and consequently the New Haven's passenger operations are a large part of its total operations. In 1958, the New Haven's passenger operations produced 45% of its total revenue, 51% of its total expenses, and 73% of its total train miles. The people served by the New Haven's passenger opera-

tions form a substantial part of the producers and users of the freight traffic to and from the South, as well as to and from other areas of the country.

The foregoing exhibits demonstrate why the New Haven is in need of additional revenue. In order to meet the situation created by the decline in net earnings, the New Haven has sold real estate in the amount of approximately $30 million since 1947, and in the same period sales of scrap have totalled approximately $15,000,000. Despite this, a large amount of deferred maintenance has accumulated. In addition, due to the decline in earnings, the

[15]

New Haven has not been able to keep up a program of necessary capital expenditures. The table below shows the amount of capital expenditures for 1953 to 1958, inclusive.

1953	$21,546,940
1954	28,321,179
1955	16,067,179
1956	10,499,244
1957	13,077,525
1958	1,388,439

During the same period, the New Haven has fallen behind in the installation of new rail and ties. The table below shows the rail installation, expressed in gross tons, 1953 to 1958, inclusive.

1953	14,509
1954	7,402
1955	10,675
1956	3,564
1957	1,838
1958	2,264

The number of ties laid during the same period is shown below.

1953	163,338
1954	31,099
1955	96,398
1956	100,367
1957	106,313
1958	96,297

Because of the accumulation of deferred maintenance as well as the inability to make average capital expenditures during the past several years, the New Haven is now faced with the need to spend substantial sums of money for capital improvements and deferred maintenance as set forth below. The maintenance items shown will be in addition to the normal day-to-day maintenance. During the next 10 years it will be necessary to spend $1,200,000 per year for deferred rail renewals in main line track, and during the next five years $228,000 per year for other rail renewals which have been

[16]

deferred. In addition, $97,500 must be spent in 1960 to cover deferred rail renewal on the Harlem River branch. Deferred tie renewals will cost $500,000 per year during the next five years. Painting and repair of buildings will cost $90,000 per year during the next five years to cover deferred maintenance. Bridge painting and repairs will cost approximately $360,000 per year during the next five years to cover deferred maintenance.

Substantial sums must be spent during the next five years for the repair of the locomotive and passenger car fleets, and substantial sums should be spent for the purchase of new equipment.

Except for the purchase of new equipment, funds for the expenditures set forth above must be generated from increased earnings.

The New Haven has paid no dividends to preferred stockholders since 1955, and none to common stockholders since the stock was issued in 1948.

Exhibit No. 8 is a statement of the annual fixed charges and contingent interest and annual long-term debt matu-

rities to be met by the New Haven during the next five years.

The following table shows the New Haven's position from December 31, 1956 to July 31, 1959 with respect to net working capital and cash:

[17]

	Current Assets	Current Liabilities	Net Working Capital	Cash
Dec. 31, 1956	$36,054,000	$35,083,000	$ 971,000	$10,437,000
Dec. 31, 1957	32,987,000	33,920,000	(933,000)	9,205,000
Mar. 31, 1958	26,609,000	34,620,000	(811,000)	6,720,000
June 30, 1958	26,248,000	29,775,000	(3,527,000)	5,209,000
Aug. 31, 1958	27,604,000	29,570,000	(1,966,000)	5,839,000
Oct. 31, 1958	29,228,000	30,334,000	(1,106,000)	6,555,000
Nov. 30, 1958	29,912,000	30,335,000	(423,000)	6,894,000
Dec. 31, 1958	32,748,000	31,328,000	1,420,000	6,538,000
July 31, 1959	27,296,000	30,858,000	(3,562,000)	5,156,000

( ) Indicates deficiency.

As indicated earlier, the New Haven is extremely vulnerable to motor carrier and water carrier competition. Down through the years, such competition has gradually siphoned away a very large part of the New Haven's short haul traffic both local and interline. Consequently, the long-haul interterritorial traffic has become more and more important in the New Haven's overall traffic picture. For 1958, the New Haven's total freight revenue, carload and l.c.l., was $81,832,614, and its total interline revenue was $74,969,537, or 91.61 percent of its total freight revenue. During the same year, the New Haven's revenue on interline traffic to and from the South was $6,096,816, or 8.13 percent of its total interline freight revenue.

For the reasons set forth above, the New Haven, as well as other Eastern lines, is in urgent need of increased revenues on traffic to and from the South, commensurate with its cost of providing the service and its financial needs.

(Verification omitted in printing.)

ESTIMATED ANNUAL FIXED CHARGES AND CONTINGENT INTEREST AND LONG-TERM DEBT MATURITIES - NEW HAVEN RAILROAD

Period	Fixed Charges and Contingent Interest	Long-term Debt Maturities (a)	Total Fixed and Contingent Obligations (b)
Year 1959	$9,260,000	$ 9,935,000	$19,195,000
Year 1960	9,400,000	10,805,000	20,205,000
Year 1961	9,180,000	9,330,000	18,510,000
Year 1962	8,850,000	8,705,000	18,655,000
Year 1963	8,550,000	6,930,000	16,480,000

(a) These estimates anticipate rescheduling of flood loan agreements to provide for principal repayments of $1 million annually to 1973. Estimates also include sinking fund requirements.

(b) Includes accruals for contingent interest of $2,375,000 each year 1958 to 1963 inclusive. No provision is included for contingent liability under agreement with Union Securities Corporation covering purchase of 131,385 shares of preferred stock.

VERIFIED STATEMENT NO. 8
OF H. L. NANCARROW

[1]

I am Assistant Vice President—Special Services of The Pennsylvania Railroad Company, with offices at Six Penn Center Plaza, Philadelphia, Pennsylvania. I am responsible for the service aspects of freight traffic solicitation. I have been with The Pennsylvania Railroad Company for 39 years, serving in both the Operating and Traffic Departments, and am completely familiar with the freight train operations of that Company and, in general, with those of other Eastern railroads.

Following graduation from Bucknell University, Lewisburg, Pa., with a Bachelor of Science degree in Mechanical Engineering, I entered the service of the Pennsylvania Railroad in October, 1920, as a draftsman in the Motive Power Section of the Maintenance Department. After serving an apprenticeship in the Altoona Shops I held various positions within the Motive Power Department at a number of different locations over the system. Thereafter, in 1936, I was appointed Superintendent

[2]

of the Logansport Division. Subsequently, I served successively as Superintendent of the Buffalo Division, Superintendent of Passenger Transportation, Eastern Region at Philadelphia, Superintendent of the Pittsburgh Division in the Central Region, General Superintendent of the Lakes Region at Cleveland, General Manager of the Western Region at Chicago and General Manager of the Eastern Region at Philadelphia. In 1952, I was appointed Assistant Vice President—Operations for the system and, in 1955, I became Assistant Vice President—Freight Sales and Services. In 1958, I assumed my present position as Assistant Vice President—Special Services in the Sales Department.

In my long career with the Pennsylvania Railroad,

serving in various capacities at numerous points over the system I have gained a fairly wide knowledge of the operations of other Eastern railroads, in addition to what I feel to be a thorough familiarity with those of the Pennsylvania Railroad itself.

I am a member of the American Railway Engineering Association and The American Association of Railroad Superintendents and am a licensed professional engineer in the State of Pennsylvania.

My testimony will deal with the general nature of the operations of Eastern railroads in the handling both of freight traffic generally and Official-Southern interterritorial traffic in particular as part of the overall operation.

The Southern railroads in their Reply, dated May 1, 1959, to the Petition of Eastern Railroads for Reopening, Further Hearing and

[3]

Modification of Order herein assail the group average Form A cost data shown by Eastern railroads on the ground that such data reflects territorial average traffic and is, therefore, assertedly unrepresentative of the North-South interterritorial traffic here in issue. For the reasons which I shall hereafter explain in detail, it is my opinion that the Southern railroads are unrealistic in suggesting the segregated costing of a particular category of general traffic, inasmuch as that traffic is, in fact, handled on Eastern lines, and I feel confident on Southern lines as well, as an indistinguishable part of the overall operation.

Railroad facilities and services are planned and operated, with the exception as to some roads of volume movements of heavy loading commodities such as coal and ore, so as to transport all freight cars between two points in a similar manner with all necessary dispatch as part of an efficient volume movement, irrespective of their contents or ultimate point of origin or destination. To illustrate, a car received by an Eastern line from a Southern connection at Cincinnati for movement North receives the same line-haul service on that line as one destined to the same point which

originates at Cincinnati. Each car enjoys the service advantages of integrated system operations and it seems only proper that each car likewise bear its proportionate share of the cost of operating and maintaining the system. In my opinion, while an effort to put a price tag on a particular category of traffic, such as Official-Southern interterritorial traffic, may have some theoretical appeal, such an approach, even if it could be accomplished on sound principles of cost accounting, fails to recognize that in actual operations all traffic, with

[4]

the possible exception of the volume coal and ore traffic previously mentioned moved by Eastern lines, and doubtless by Southern lines as well, is so intermingled that every segment of the whole is affected by and, in turn, itself affects the services accorded on all other traffic.

The degree of commingling and interdependence of traffic in Official Territory can best be appreciated if the general character of train service on Eastern railroads is first described. Present-day transportation is a highly competitive field. The commercial demands of today's shippers and receivers are considerably more exacting than those of railroad customers in the past. As will be seen later in my description of the operations of Trains MD-12 and CS-1 between Potomac Yard, Va., and Harsimus Cove Yard, N. J., among others, satisfying those demands for particular shippers and receivers creates additional burdens with respect to other traffic. Moreover, railroads at present, particularly in the East, are faced with constantly increasing competition from other modes of transportation, primarily truck and water. In response to the service demands of shippers, and particularly of their receivers, and in order to maintain their competitive position, the Eastern railroads have established a comprehensive pattern of arranged freight train services with such coordination of schedules, consists and make-ups that a substantial change in any particular service must of necessity directly influence many

other services. Inasmuch as expedited service is required on interline traffic, just as on certain local traffic, the coordination of

[5]

schedules must often extend beyond the operation of an individual carrier. If this were not the case it would, of course, be impossible to provide speedy, dependable and efficient transportation of the traffic as a whole.

Using for purposes of illustration the Pennsylvania Railroad, with which I am of course most familiar, service is provided throughout the East in all directions, East-West as well as North-South. In general, the freight train operations of the Pennsylvania involve the regular operation of the following types of train service:

1. Preference trains operating, when the volume of traffic justifies, between the more extreme terminals of the system performing an absolute minimum number of set-offs and pick-ups at intermediate points en route.

2. Preference trains between extreme system terminals providing limited intermediate service.

3. Through trains operating between important terminals not necessarily at the extremes of the system, generally along the routes of the preference trains previously described.

4. Through trains operating between terminals not located on the routes of the trains described above.

5. Local freight trains operating on both main and branch lines for the distribution and collection of cars and for station, team track and industrial switching.

[6]

6. Non-preference through freight trains operating over the routes and between the terminals previously described, some of them seasonal in nature, consisting mainly of a single commodity such as coal or ore or of empty cars.

The foregoing is a conventional method of operation and is by no means peculiar to the Pennsylvania. The pertinent consideration is the recognition that each of the foregoing types of train service is provided on Official-Southern traffic just as on all other traffic and generally in conjunction with such other traffic. These general conclusions are fully confirmed by the studies which I shall hereafter describe.

The nature and extent of the services provided by Eastern railroads on Southern interterritorial traffic is best illustrated by the studies on the Pennsylvania and other Eastern railroads conducted under my supervision incorporated into the exhibits which I shall now explain in detail. The first of these studies may be termed a train utilization study and is simply intended to demonstrate the extent to which the total train service of Eastern railroads participates in the movement of Southern interterritorial traffic. The studies in the second group consist of detailed tracings depicting schematically a number of trains operated by the Pennsylvania which are substantially involved in the transportation of Southern traffic. The latter studies are illustrative of the commingling of traffic and the interdependence of trains comprising the general transportation network.

[7]

My accompanying Exhibit A is the Train Utilization Study. It should be noted with respect to this study that it was not confined to Eastern lines known at the outset to participate substantially in Southern interterritorial traffic. In the interest of conservatism, it was desired to include a fair cross-section of the Official Territory carriers in this study. Thus, the Erie and Nickel Plate, both primarily East-West rather than North-South carriers, were studied, as well as the Pennsylvania and Baltimore & Ohio, which participate heavily in this traffic, and the New Haven, the principal New England participant. Exhibit A shows the results of the study for each of the five study lines individually as well as on a consolidated basis.

Each of the five named carriers was asked to study its operations and traffic during a week in May of this year to determine the proportion of trains handling at least one carload of the involved Official-Southern interterritorial traffic. Light locomotives, locomotives with caboose cars only, switching or transfer runs, non-revenue freight trains and coal trains were excluded. The five study lines were merely asked to furnish, first the total number of freight trains operated during the week, classified as between through and local trains and, secondly, the number of such trains similarly classified which were found upon study to include at least one car of Official-Southern interterritorial traffic.

The results of this study are most revealing. On the Pennsylvania

[8]

we found that 40.4% of the loaded freight trains (excepting those previously enumerated) operated on the system during the Week of May 3-9, 1959, including East-West trains as well as North-South trains, contained Southern business. On the Baltimore & Ohio, 47.9% of the trains operated during the week of May 20-26, 1959, contained Southern business. On the New Haven, 52.8% of the trains operated by that system during the week of May 3-9, 1959, included at least one Southern car. And it is significant to note that even roads which are primarily East-West carriers nonetheless utilized a significant portion of their train service in handling that Southern traffic in which they participate. For the Erie Railroad, 38.5% of the trains operated during the week of May 17-23, 1959, contained Southern cars, while for the Nickel Plate, during the week of May 10-16, 1959, 57.8%, or well over half of the trains of this predominantly East-West railroad, included at least one car of Southern interterritorial traffic. On a consolidated basis for the five study Eastern railroads, of the weekly total of 13,660 trains, 6,199, or 44.7%, participated in the transportation of the carload traffic here involved to or from South-

ern Territory. These included 50.7% of all through trains and 33.4% of all local trains operated. It must be emphasized that many trains which might not contain a loaded Southern car nonetheless contained empty cars moving interterritorially but were not included in the study. The inclusion of these trains would obviously increase the utilization shown.

In their Reply to petition previously referred to, the Southern rail-

[9]

roads attempt to minimize the importance of the involved traffic to the Official Territory carriers. Thus, it is asserted, at page 20, that "the divisions here at issue affect only 5% of the total revenues of the Northern lines." I am not prepared to accept the percentage there stated but, even if this were the case, it is most significant that in order to derive whatever revenues may properly be attributable to Southern traffic, five representative Eastern lines were obliged during a one-week period to utilize over 44% of their total available service. During another week, I am sure that proportionate utilization would be at least as great but, more important, many different trains would be found with Southern cars in their consist. I am convinced that were it possible to extend the same test for a longer period and to enumerate the thousands of different trains involved, it would be found that ultimately every train operated by an Eastern line would participate in the transportation of Southern traffic. The obvious conclusion to be drawn is that Southern traffic shares in the same service provided on traffic generally within Official Territory and is not restricted to any particular trains or categories of service.

Another comparison is possible as a result of the breakdown by train type in the train utilization study which again serves to justify on an operating basis the propriety of allocating to Southern interterritorial traffic its proportionate share of the average cost of all traffic in the East. As stated, these studies distinguish between through and way

[10]

or local trains. Thus, it was possible to determine the proportions of all trains operated by each of the five study roads during the test week which were way or local trains. On an individual basis, these proportions range from 15.1% for the Nickel Plate to 58.5% for the New Haven. For all five roads, 4,693 trains, or 34.7%, of all trains operated during the week were way or local trains, the balance being classified as through trains. Similarly of the trains containing Southern business, 25.9% were way or local trains. On the basis of the foregoing facts and my general experience I conclude that Official-Southern interterritorial traffic is not confined to through trains on Eastern lines. In this respect, Official-Southern interterritorial traffic is indistinguishable from traffic generally.

Exhibit B is a detailed system map of The Pennsylvania Railroad. The map shows the network of lines over which the Pennsylvania operates and permits the accurate location of points shown on the schematic train diagrams which I shall now describe.

As I stated above, certain studies were conducted under my supervision in order to determine the relationship of Official-Southern traffic to other traffic and to illustrate the degree of commingling of cars and interdependence of selected trains handling a substantial volume of interterritorial business to and from Southern connections with other trains operated by the Pennsylvania. Accordingly, I understook to trace Pennsylvania Railroad freight trains operated between the Cincinnati and Potomac Yard gateways, on the one hand, and important interior East-

[11]

ern terminals of that line on the other. For this purpose I selected March 16, 1956, as a typical day on which the subject trains might fairly be traced. This was the day during the traffic study month on which the volume of traffic moving through Potomac Yard most approached the aver-

age. The trains selected include both long-distance preference trains of the type described in paragraphs 1 and 2 above and shorter-haul preference trains of the type described in paragraph 3. In order to present a comprehensive picture of the assembly, operation and distribution of the principal trains operated by the Pennsylvania to and from the two major Southern gateways, Cincinnati, Ohio; and Potomac Yard, Va.; my studies embrace the following trains, all of which either arrived at or were dispatched from Cincinnati or Potomac Yard, as the case may be, on March 16, 1956:

Exhibit C—PRR Freight Train CIN-1, Enola (Harrisburg) to Cincinnati.

Exhibit D—PRR Freight Train CIN-2, Cincinnati to Enola.

Exhibit E—PRR Freight Train LM-5, Columbus to Cincinnati.

Exhibit F—PRR Freight Train LM-4, Cincinnati to Columbus.

Exhibit G—PRR Freight Train MD-12, Potomac Yard to Harsimus Cove.

Exhibit H—PRR Freight Train CS-1, Harsimus Cove to Potomac Yard.

Exhibit I—PRR Freight Train EC-5, Potomac Yard to Enola.

Exhibit J—PRR Freight Train B-6, Enola to Potomac Yard.

[12]

Exhibit K—PRR Freight Train MD-18, Potomac Yard to Greenville.

Exhibit L—PRR Freight Train MD-1, Greenville to Potomac Yard.

Exhibit M—PRR Freight Train MD-6, Potomac Yard to Greenville.

Exhibit N—PRR Freight Train MD-13, Greenville to Potomac Yard.

Exhibit O—PRR Freight Train BP-2, Potomac Yard to Philadelphia.

Exhibit P—PRR Freight Train BP-5, Philadelphia to Potomac Yard.

These several charts show in precise detail the manner in which cars of Official-Southern business moving through the two principal gateways are assembled or distributed, as the case may be, and moved over the Pennsylvania Railroad in association with other traffic. The obvious necessity for a merger of traffic, making it possible to handle all traffic efficiently and economically on a volume basis, becomes evident upon analysis of the train charts.

In each case I have traced from Pennsylvania Railroad origins or connections, or to Pennsylvania Railroad destinations, or connections, as the case may be, every car, whether or not of Southern interterritorial character which was at any time a part of the consist of the subject train. In each instance the loaded and empty cars of Official-Southern traffic included in the study train are shown in brackets following the indicated total consist of the train. The tracing is outlined on the exhibits by showing train symbols or, in the case of extra trains, locomotive

[13]

numbers, with an abbreviated statement of the loaded and empty cars traced to or from each of the affected trains at every stage of the movement of that train. Where cars originate or terminate or are interchanged at a particular station, the diagram so indicates with respect to that location. The route of the study train itself is readily identified by the heavy black line; the lighter lines represent the other Pennsylvania Railroad trains involved in the ultimate disposition or initial origination, as the case may be, of the cars at any time part of the consist of the study trains.

While the tracing of the study cars and involved trains on each of the schematic diagrams is often quite detailed, such detail is vital in my opinion to an understanding of the varied operations and coordination of schedules and services required to enable a modern railroad to meet the service demands of its many shippers in an efficient manner. Indeed the very intricacy of these operations, as shown by the train diagrams, itself demonstrates the indistinguishable nature of general traffic such as here involved on Eastern lines which renders impracticable, if not impossible, the segregation of any particular category of that traffic from the total for purposes of determining costs of service.

Train CIN-1

Exhibit C, as previously identified, is a chart based upon a study of Pennsylvania Railroad Freight Train CIN-1, from Enola Yard near Harrisburg, Pa., to Cincinnati, Ohio, arriving on March 16, 1956. This Exhibit C shows schematically the Pennsylvania Railroad origins of all cars, whether or not destined to Southern Territory, which made up

[14]

Train CIN-1 and the disposition of such cars at any time a part of the study train. As I previously stated, this chart, and those which outline the operations of the other study trains to be described hereafter, shows the route of each involved train by a thin line, that for the study train, in this case CIN-1, being a heavy black line. The identifying designation of each train is also shown. Pick ups and deliveries at various terminals are indicated in the squares set forth under the name of the terminal. The consist of the study train is shown between each terminal so that the changes in that consist are fully reflected. In addition to the total consist showing both loaded and empty cars, similar figures in brackets indicate the number of loaded and empty Official-Southern or Southern-Official cars, as the case may be, dependent upon the direction of movement.

It can be seen that the traffic gathered at Enola for Train CIN-1 originated at many different points in Eastern Territory and moved over the Pennsylvania to Enola in a number of different Pennsylvania Railroad trains. This widespread dispersion and consequent service demand was also evident in the Official-Southern traffic included in CIN-1.

Of the 15 loaded cars of Southern-interterritorial traffic included in CIN-1 upon departure from Enola, 10 cars destined to the South originated at such widespread points as Cromby, Waverly, Beverly, Philadelphia, Lebanon, Marietta, Eddystone, Pa., and Inwood, W. Va., or,

[15]

in interchange, at White Marsh Junction. In addition, this train provides an interesting feature in that the other 5 cars were received at Potomac Yard from Southern connections for Official Territory destinations, so that CIN-1 upon departure from Enola contained 10 cars destined to the South via the Cincinnati gateway and 5 cars received from the South via the Potomac Yard gateway. The latter cars were delivered at Springdale, Pa.; East Liberty, Try Street (Pittsburgh), Pa.; and Weirton Junction on the Pennsylvania while the remaining load terminated at McKeesport, Pa., on the Pittsburgh & Lake Erie. Concurrent with the distribution en route of the five cars from the South, CIN-1 picked up two loaded cars for movement to the South at Altoona, originating in Williamsport, and an additional five loaded cars and an empty car at Scully, four of those loads having originated at 11th Street, Pittsburgh, and the remaining one at Oil City. Upon arrival at Cincinnati therefore, the total consist of CIN-1 was 35 loaded cars and 18 empty cars, of which 17 loads and 10 empties, or 51%, of the total consist were delivered to Southern carriers at that terminal.

Analysis of the chart, particularly at the terminals, gives some indication of the cost incident to assembling and distributing the cars in the study train. For example,

23 trains of various character brought 93 cars into Enola to be assembled into CIN-1 at that point. At Pitcairn Yard en route, 20 trains were required to dispose of the 51 cars set off from CIN-1 at that terminal. Official-Southern traffic participated in this service.

[16]

In all, Exhibit C shows that a total of 75 trains were required to assemble and distribute the cars that were at one time a part of the consist of CIN-1. A total of 105 cars were handled by CIN-1 during its west-bound movement, representing an average of 1.40 cars in each of the 75 auxiliary trains without regard to any particular break-up or make-up point. The trains upon which CIN-1 was dependent were of all types and included through freight trains, local freight trains, both symbol trains and extra trains, and transfer, turn-around and mine runs. Furthermore, the operations of Train CIN-1 should be viewed in conjunction with those of Train LM-5 described in my Exhibit E, inasmuch as CIN-1 transports traffic from the East to much of the interior area served by LM-5 from Columbus and supplements the service of the latter train by handling freight originating in the same territory routed to and through the Cincinnati gateway.

Train CIN-2

Exhibit D depicts in similar schematic fashion the operations of Train CIN-2 dispatched from Cincinnati to Enola on March 16, 1956, and the manner in which the cars moved by that train were distributed to their ultimate Eastern destinations. Train CIN-2 is typical of the longer-haul preference trains operated by the Pennsylvania and is operated primarily to move traffic, including that delivered by Southern connections, from the Cincinnati gateway to Eastern points.

Upon departure from Cincinnati, CIN-2 contained 50 loaded cars and 10 empty cars, of which 31 loads and 3 empties, or 57%, were

[17]

Southern-Official interterritorial traffic. Upon arrival at Enola, the final terminal of the study train, CIN-2 contained 17 loaded and 1 empty Southern-Official cars, or 35% of its then consist of 45 loads and 4 empties. The disposition of cars, both those of Southern origin and others, at points intermediate between Cincinnati and Enola is shown on the chart. The following table provides some indication of the continuous dispersion of the consist of CIN-2 as the eastward movement of this train progressed.

	No. of Trains	No. of Cars	No. Cars Per Train	No. O-S Cars	No. O-S Cars Per Train	No. Cars Term or Interchanged All	No. Cars Term or Interchanged O-S
Columbus	11	13	1.2	9	0.8	4	1
Pitcairn	11	12	1.1	5	0.5	1	1
Altoona	1	1	1.0	1	1.0	2	1
Enola	21	48	2.3	18	0.9	5	–

I wish to make it plain, in showing the foregoing distribution of cars, that my failure to show the entire consist of the many trains required to effect distribution of CIN-2's complement of cars obviously does not warrant the assumption that such other trains did not also include other non-study cars in their make-up. On the contrary, it must be clear that the operation of such trains could not possibly be justified merely to provide the means of distribution of the cars interchanged from the subject train. It is significant, however, as the foregoing tabulation shows, that by virtue of the many trains required and the small number of former CIN-2 cars per train, particularly those of

[18]

Southern origin, Southern-Official traffic reaches numerous points on the Pennsylvania Railroad, many of which are also served by other Northern carriers competing with the Pennsylvania for this interterritorial business.

Of the 14 loaded cars of Southern-Official business which were distributed from CIN-2 at points intermediate

to Enola, one load was terminated at Columbus and 5 loads were switched at Columbus to Train VL-6 operated via Weirton Junction, at which point one load was cut out for movement to destination at Martins Ferry in Trains PH-111 and Extra 9029. The 4 loads of Southern traffic remaining in Train VL-6 continued to Scully Yard, where two loads were interchanged to the Pittsburgh, Chartiers & Youghiogheny, one load switched to Train PH-26 for movement in Train PG-34 and Extra 2021 via Pitcairn and Conemaugh Yards to Seward, Pa., and the remaining load moved in Extras 8603 and 8837 via Shire Oaks to Donora.

In addition to the loaded cars of Southern traffic from CIN-2 which departed from Columbus in Train VL-6, 2 carloads of the involved traffic from the study train, moved from Columbus in Train PH-4, operating to Dennison, Ohio, via Newark and Trinway. One of these cars terminated at Newark while the other was interchanged at Trinway to Train ZB-1 for delivery at Zanesville, Ohio. It might be noted that the two empty Southern-Official cars cut out of CIN-2, at Columbus also moved to Newark in Train PH-4. Thus, Train CIN-2 departed from Columbus with only 23 loads and 1 empty of the 31 loads and 3 empties of interterritorial business with which it had left Cincinnati. Six of

[19]

the remaining 23 loaded cars were dispersed en route between Columbus and Enola. Again a number of intermediate handlings and a variety of trains were required to effect this distribution. Three loads were set out at Pitcairn and moved on two different days in Train PG-10 via Altoona and Enola to Waverly and Greenville Yards, N. J. Another loaded Southern car moved from Pitcairn in Train WP-20 via Island Avenue and Kiski Junction for interchange to the Bessemer & Lake Erie at Butler, Pa. Another Southern car was delivered by yard engine from Pitcairn to East Pittsburgh. Between Pitcairn and Altoona 18 loaded Southern cars, in addition to the remaining empty car, moved in

CIN-2. One loaded Southern car in CIN-2 was terminated at Altoona while the 17 then remaining in the train moved on to Enola.

The distribution of the consist of Train CIN-2 east of Enola again required a large number of trains owing to the wide dispersion of this traffic. Considering only the dispersion of the 20 loaded cars of Southern-Official traffic which were moved to Enola in Trains CIN-2 and PG-10, 2 loads terminated at Burlington, N. J., 2 loads were interchanged to the Pennsylvania-Reading Seashore Lines at Camden, N. J., 1 load terminated at Harsimus Cove Yard, N. J., 4 loads terminated at Port Newark, 1 load terminated at Greenville Yard, N. J., 2 loads were interchanged at Greenville by carfloat for movement to the Long Island Rail Road and 1 load for movement by water to the New Haven Railroad, 7 loads moved to Baltimore for delivery in two different trains and the remaining empty Southern car terminated at Thurlow Yard.

[20]

Exhibit D and the table above show that there are intermediate terminal operations throughout the entire eastward movement of CIN-2 and that the dispersion of the consist of that train requires the use of through-freight trains serving interior terminals such as VL-6 operating from Columbus to Scully; local freight trains illustrated by Train ZB-1, Trinway to Zanesville, and A-35, Trenton to Bordentown; mine runs exemplified by Extras 2021-9528-21, Conemaugh to Seward; transfer runs such as that required for the movement of three Southern-Official cars from Newark to Port Newark; interchange runs like that required for the delivery of two loaded Southern-Official cars to the Pittsburgh, Chartiers & Youghiogheny at Scully and the movement of three loads and an empty to the Reading Company at Harrisburg. Carfloat service, as shown by the transfer of Southern-Official cars, was provided separately to the Long Island and the New Haven from Greenville

Yard. Yard service was performed at Columbus, Pitcairn, Altoona, Enola, Philadelphia and Jersey City and is also required for such movements as that from Weirton Junction to Weirton, Pitcairn to East Pittsburgh, Washington to Ivy City and at many other points.

In addition, the diagram for Train CIN-2 includes a table of the points of origin of the 18 loaded and 2 empty cars added to the consist of that train at Pitcairn. The number of trains required to move these cars to Pitcairn for dispatchment in CIN-2 is also shown. To avoid duplication and to simplify this exhibit to the degree permitted by the facts,

[21]

I have not sketched those trains on the exhibit. It is important to note, however, that the cars received by CIN-2 at Pitcairn from the various origins listed, none of which were Southern-Official traffic, were merged at that point with Southern-Official traffic and other traffic in the original consist of CIN-2 upon departure from Cincinnati. Such a combination of traffic from various points of origin is typical of modern railroad operating practices. Not only is it important to gather traffic from all sources in order to create a reasonable train load but the degree of this commingling of traffic affords a vivid demonstration of the impracticality of any effort to isolate the services provided on any particular territorial category of traffic.

Train LM-5

Exhibit E shows the operations of Pennsylvania Railroad Freight Train LM-5, operated from Columbus to Cincinnati on March 16, 1956, and its associated trains. This train is typical of the through trains operated between terminals of the Pennsylvania Railroad intermediate to the extremes of the system. The purpose of this diagram is to show the manner in which Southern-Official traffic is gathered from its various Eastern origin points, together with

other traffic, for incorporation into one of these typical shorter-haul through trains. This train moves from Columbus traffic brought to that terminal from the same areas in Ohio, Western Pennsylvania and Western New York which, it will be seen, are served by its counterpart Train LM-4 in the distribution of Southern

[22]

originated traffic. The scope of the area providing traffic for LM-5 may be approximated from the diagram and by reference to the system map, my Exhibit B. On the study day, cars for Train LM-5 originated at 25 different points in four states. Among these points, it might be noted that one loaded car destined for Southern Territory was received from the New York Central at Buffalo and moved to Columbus in a series of trains via Erie and Canton while another load moved from Thurlow Yard (Marcus Hook, Pa.) on the Eastern Seaboard through Harrisburg, Altoona, Conway and Canton. In addition to the loaded cars, 44 empty cars en route South were gathered at various points for inclusion in LM-5.

Departing from Columbus, LM-5 contained 30 loaded cars and 47 empty cars, of which 19 loads and 44 empties were destined to Southern Territory. Additional cars, including some Official Southern traffic, were picked up en route at Morrow, Ohio. Of the five loaded Southern cars added to LM-5 at that point, one originated on the branch line at Zanesville, two at Junction City, one at Lancaster and one at Circleville, Ohio. After inclusion of the traffic received at Morrow from Train ZB-15 and its connecting trains, LM-5 arrived at Cincinnati with a total of 89 cars (39 L, 50 E), of which 68 (24 L, 44 E), or 76%, were destined to points in Southern Territory. Significantly, 20 different Pennsylvania Railroad trains were required to accumulate the 89 cars in the consist of LM-5 on arrival at its Cincinnati terminal.

[23]

Train LM-4

My Exhibit F is a schematic diagram of the counterpart in the opposite direction of Train LM-5, previously described, and shows the distribution within Official Territory of the traffic at one time a part of Pennsylvania Railroad Freight Train LM-4 operated from Cincinnati to Columbus on March 16, 1956. Train LM-4 serves generally the same Ohio, Western Pennsylvania and Western New York territory from which the bulk of the traffic originated by LM-5 was found to move. The purpose of this exhibit is to outline the manner in which traffic originating in Southern Territory destined to Official Territory points via the Cincinnati gateway is distributed to shorter-haul interior points.

In order to accomplish this fanning out of the cars from Cincinnati to the many Official Territory destinations shown on Exhibit F, Train LM-4 must have available the services of various other freight trains of all classes, both from intermediate points and, more particularly, from its final terminal at Columbus. In this instance the cars set off at Morrow for points on the Zanesville Branch originated in Indiana, Illinois and Western and Southwestern states. Southern-originated cars destined to points on this branch would, of course, be handled in the same manner. Of the 12 cars of Southern-Official traffic included in the consist of LM-4 upon departure from Cincinnati, 2 loaded cars were delivered en route at Xenia, Ohio, and 3 loads and 4 empties terminated at Columbus, leaving 3 loads for movement beyond.

[24]

A total of 37 cars of all traffic moved to Columbus in Train LM-4, of which 23 required further transportation beyond that point. These 23 cars dispersed beyond Columbus to such an extent that 15 different trains were needed to

effect their disposition. The three loaded Southern-Official cars in LM-4 destined to points beyond Columbus moved from that terminal in Train NW-82 via Pitcairn and Altoona to Enola; thence in Train NY-8 to Waverly Yard, Newark, for delivery. Thus, it can be seen that, while the general purpose of LM-4, as stated, is to serve shorter-haul interior points, in practice it is impossible to completely confine all shorter-haul traffic to this train and all longer-haul traffic to other trains such as CIN-2. Nonetheless, in order to provide adequate service to the public and to expedite movements to more distant terminals, it is necessary to establish trains, in part, over the same routes between terminals of varying distances in order to avoid indiscriminate mingling of short-haul and long-haul traffic. This operating requirement is demonstrated even more clearly by certain of the expedited trains to and from Potomac Yard, such as MD-12 and CS-1, to be later described.

Trains CIN-1, CIN-2, LM-5 and LM-4, traced in my Exhibits C through F, are typical of the operations conducted by the Pennsylvania Railroad in providing service to and from the Cincinnati gateway through which moves a substantial portion of Southern interterritorial traffic. I have made similar studies of trains operated to and from Potomac Yard, the other principal gateway on Southern traffic for the Pennsylvania and Eastern lines which I shall hereafter describe.

[25]

It should first be understood that in order to adequately meet the demands and industrial requirements of the huge consuming area in the Northeastern portion of the United States, sufficient service must be provided to handle a tremendous volume of goods of various types. The quantity of such traffic moving by rail has substantially declined in recent years. At one time it was possible for the Pennsylvania Railroad, for example, to operate solid trains of perishables during portions of the shipping season from Potomac Yard to the Jersey City area. The following

statement showing the proportions of perishable traffic in the three principal perishable trains operated between these points during the in-season week of March 11-17, 1956, demonstrates that this is no longer the case:

Train	Cars Perishables	Total Cars	Percent Perishables
MD-12	455	784	58.0
MD-18	163	653	25.0
MD-6	416	821	50.7

Nevertheless, while the volume of traffic has somewhat diminished, service demands have substantially increased. It is just as necessary today, as formerly, to schedule perishable deliveries to satisfy market and auction arrival requirements. Indeed, the challenge of competitive modes of transportation has created an even greater demand for expedited service. It will be seen that such service can only be provided by sacrificing economies of operation in terms of fewer trains that might otherwise be accomplished.

[26]

For the foregoing reasons, the nature and operations of the trains principally concerned in the origination and distribution of Official-Southern traffic routed via Potomac Yard, particularly for delivery to Eastern markets, is somewhat different from that provided on such interterritorial cars interchanged through the Cincinnati gateway. Traffic for the New York, Jersey City and Newark areas, and beyond to New England points, is segregated at Potomac Yard, so that it may be forwarded in through Pennsylvania Railroad trains terminating, in the case of former areas at Harsimus Cove Yard and, in the case of New England and Long Island at Greenville Yard. Similar service from these yards is provided on cars moving from New York or New England-Long Island, respectively, to the South. As will be seen, with the exception of Trains MD-12 and CS-1, the gathering and ultimate distribution of cars in the study

trains occurs to a substantial degree on other Eastern railroads. The cars in Trains MD-12 and CS-1 move for the most part to or from Manhattan and require extensive carfloat service across New York Harbor, as well as substantial classification work in the yard on the New Jersey side.

Providing expedited service to and from points such as New York, however, does not satisfy the service requirements at other important consuming and production areas intermediate to the end terminal of the particular train. Thus, additional trains over the same routes are needed under this method of operation to transport traffic to and from the inter-

[27]

mediate points through which the more expedited trains are relayed. Trains terminating in such cities as Baltimore, Philadelphia and Camden, or at Enola Yard, not only move cars to and from those points but, in addition, set off or pick up cars at intermediate terminals which are distributed to or received from other trains at the terminals of those trains. The effect of such service demands upon the Pennsylvania and other Eastern roads in the industrial and highly competitive northeast is clearly illustrated by the diagrams of the trains operated to and from Potomac Yard to which I shall now refer.

Each of these study trains was either dispatched from or arrived at Potomac Yard on March 16, 1956. As I previously explained, I selected March of that year because of its inclusion in the Eastern lines' traffic study. March 16 was the day in that month when the total of the cars received at and dispatched from Potomac Yard most nearly equaled the average daily performance at that yard for the month.

Train MD-12

Exhibit G diagrams the operations of Train MD-12, Potomac Yard to Harsimus Cove Yard, which I previously explained was established primarily to transport Southern

perishable traffic to the New York City markets. In former years this train at least during certain seasons consisted almost exclusively of perishables and was sometimes operated in several sections. Today, as the table above shows, that condition no

[28]

longer exists and, as a matter of fact, the operation of this train has on occasion been discontinued during various off-season periods.

As shown by Exhibit G, Train MD-12 departed from Potomac Yard with 109 loaded cars and 1 empty car, of which 97 loaded cars contained Southern-Official traffic. This train operated directly to Waverly Yard (Newark, N.J.), avoiding the delay incident to performing service at intermediate terminals such as Baltimore, Philadelphia and Trenton. At Waverly Yard, there was some distribution of the consist of MD-12 to nearby points served by local freight trains, as well as the interchange of some cars to connections. Eleven of the loaded Southern cars terminated at Waverly Yard. An additional four such cars were distributed out of that yard in three different local trains for delivery at Linden and Rahway, N. J. The interchange movement to which I referred was made on two Southern cars with the Central Railroad of New Jersey at Oak Island Junction for delivery to Newark and Grasselli, N. J., respectively.

Leaving Waverly Yard with 93 loads, of which 81 were Southern-Official traffic, MD-12 moved via Meadows Yard to Harsimus Cove Yard. Passing through Meadows Yard, "hold" cars and those for interchange with three connecting railroads were set off. A total of 22 Southern-Official cars were interchanged from Meadows Yard to the Delaware, Lackawanna & Western; New York, Susquehanna & Western; and the Erie for movement to final destination. The 58 loaded cars remaining in Train MD-12, of which 57 originated in the South, continued to Harsimus Cove Yard.

[29]

The distribution of these cars, all but one of which represented Southern traffic, from Harsimus Cove Yard very clearly demonstrates the degree to which costly water service must be provided on Southern originated cars. Of the 57 loaded Southern-Official cars which arrived at this yard in the study train, 32 loads moved by carfloat for delivery to Manhattan and an additional two loads were delivered by carfloat to the New York Central at 70th Street. The remaining Southern cars terminated at Harsimus Cove or were interchanged to connections, with the exception of two loaded cars which moved to Brooklyn and an additional car relayed to Greenville Yard for movement by carfloat to the New Haven. The effect of holding arrangements and reconsignment and icing service is also well illustrated by the distribution of the cars which were not terminated at Harsimus Cove Yard itself.

Train CS-1

My Exhibit H is a diagram of Pennsylvania Railroad Freight Train CS-1, dispatched from Harsimus Cove Yard on March 16, 1956, to Potomac Yard. In a sense this is a counterpart of Train MD-12 just described which provided expedited service on Southern perishable traffic to the New York City area. Train CS-1 is operated to afford expedited through transporation of southbound less-carload and forwarder traffic from the New York area via the Potomac Yard gateway. Just as was the case with MD-12, the problem there being one of distribution, the significant considerations with respect to Train CS-1 are,

[30]

first, prior gathering service necessary to create the train and, secondly, the necessity for expeditiously relaying CS-1 through intermediate points such as Trenton and Philadelphia to meet competitive demands, thus requiring additional trains to serve those points.

Of the 80 cars in the total of CS-1 upon departure from Harsimus Cove Yard, 72 cars required carfloat service and 2 cars lighterage service on the Pennsylvania and an additional 4 cars were received in carfloat service from the New York Central via its 70th Street float bridges. As shown, virtually all of the cars in CS-1 were destined to Southern Territory, including the additional loaded car picked up en route at Baltimore. Upon arrival at Potomac Yard, 74 of the 77 cars in CS-1, all but one being loads, or 96%, were interchanged for movement to points in the South.

It should also be emphasized that, whereas a load for the South was picked up en route at Baltimore, CS-1 was relayed through Trenton and Philadelphia in order to expedite the movement of the predominantly less-carload and forwarded traffic to the South. This necessitated the operation of additional service over the same route between Harsimus Cove and Potomac Yard in order to pick up and deliver cars at intermediate points. Thus, the expedited service of CS-1, like that of MD-12, can only be furnished by imposing upon other trains the burden of serving intermediate points.

Train EC-5

Exhibit I is a schematic diagram of Pennsylvania Railroad Freight

[31]

Train EC-5, dispatched from Potomac Yard to Enola on March 16, 1956. This train provides a typical illustration of the manner in which Southern-Official traffic destined to northern, western and northeastern destinations beyond the terminal of the train in Enola is distributed as part of the general service pattern. While, as shown, EC-5 operated in a through movement from Potomac Yard to Enola, the subsequent scattering of the cars from that train in a wide variety of service is most striking. Generally speaking, no

carload traffic terminates or originates at Enola so that all cars hauled into that yard, such as those here included in the consist of Train EC-5, must be further classified and dispersed. Enola Yard is a major classification center for the Pennsylvania, much like the hub of a wheel, and trains converge upon and are dispatched from this yard in all directions.

In the case of Train EC-5, which arrived at Enola with 44 Southern-Official cars out of a total consist of 59 cars virtually all loaded, it required six trains to the west, one train to the southwest and five trains to the north, northwest and northeast, or a total of 12 Pennsylvania trains out of Enola to progress the cars from EC-5 toward their ultimate destinations. It should be noted that this consist included cars moving as far west as Chicago, northeast to Maine and northward to Buffalo for local delivery and for connections through Canada to Detroit, as well as perishable shipments to the 43rd Street Yard at Pittsburgh. A total of 25 cars from EC-5, of which 17 were loaded

[32]

cars from Southern Territory, moved through the Wilkes-Barre gateway to the Delaware & Hudson for delivery to New England lines. This demonstrates that the Pennsylvania Railroad must provide service to and from New England on Southern interterritorial traffic routed via Wilkes-Barre, as well as through Greenville Yard, Jersey City, previously described in connection with the diagrams of Trains MD-18, MD-6, MD-13 and MD-1. Inasmuch as some of these cars are distributed in New England at points common to both the Wilkes-Barre and Greenville routes, the delivering carrier in these instances must also provide alternative service.

Further, it should be noted that while the cars from Train EC-5 departed from Enola in 12 different trains, a total of 25 different Pennsylvania road trains were eventually involved before the 59 cars in EC-5 were ultimately disposed of by the Pennsylvania through delivery or inter-

change. It can be seen that these 25 trains were of all types and classes, including through trains and way trains, runner crews and yard crews and that both main line and branch line operations were involved.

Train B-6

My Exhibit J is a schematic diagram of Pennsylvania Railroad Freight Train B-6, operated from Enola to Potomac Yard arriving on March 16, 1956. This train illustrates in the reverse direction the operating conditions discussed above with respect to Train EC-5 from Potomac Yard to Enola. In the case of B-6, as Exhibit J amply demonstrates, the

[33]

gathering service necessary to assemble this train at Enola is comparable to that required for distribution of the cars in EC-5.

After setting off 36 loaded cars en route at Baltimore, Train B-6 arrived at Potomac Yard with a total of 94 cars, of which 65 (41 loads, 24 empties), or 69% of the then train consist, were cars involved in this proceeding destined for Southern Territory. These 65 Official-Southern cars were part of a total consist of 130 cars dispatched from Enola. Exhibit J shows that 40 Pennsylvania Railroad freight trains were required to transport these 130 cars to Enola for assembly and dispatchment in Train B-6. As was the case with the cars distributed by Train EC-5, the consist of Train B-6 included cars from west of Chicago, East St. Louis and Buffalo at one extreme and New England on the other, as well as from the vast territory in between.

The full gamut of service was also involved in providing the cars for B-6 at Enola. Some of the cars moved in fast-scheduled trains such as NW-82, operating from Chicago to Enola. Others moved in slow local trains, such as M-23, from Sand Company to Mount Union, Pa., and OB-1, from Bradford, Pa., to Olean, N. Y.

The 130 cars at one time part of the consist of B-6 originated at 27 cities on the Pennsylvania Railroad and at many offline stations. They included cars of perishables, livestock, sand, merchandise, coal, liquor, rayon, auto parts, cereals, paper, feed, wood pulp, meat and others. As a consequence, the weight of the lading and the classes of the cars

[34]

required varied considerably, as did the inspection services performed and the motive power used to move the traffic. All of these varied services are available and regularly furnished to Southern traffic as an indivisible part of the overall train service of the railroad.

Train MD-18

My Exhibit K is a schematic diagram of Pennsylvania Railroad Freight Train MD-18, dispatched from Potomac Yard to Greenville on March 16, 1956. MD-18, like MD-12 previously described, furnishes expedited northbound transportation of perishables and commodities demanding similar service. In this instance, however, whereas a substantial part of the traffic of MD-12 is hauled to Harsimus Cove for delivery in the New York City area, MD-18 was established primarliy to insure rapid interchange through Greenville Yard of traffic destined to New England points.

As was true of Train MD-12, shown in my Exhibit G, MD-18 operated through to Waverly Yard in Newark before its consist was broken. At Waverly cars requiring local freight service, for example, the load of Southern-Official traffic delivered at Woodbridge, or transfer service such as that to Port Newark, Meadows Yard, Harsimus Cove Yard or to connecting lines were cut out of MD-18. It should be pointed out that the Southern cars transferred from the study train at Waverly to Harsimus Cove Yard moved beyond that yard by Pennsylvania Railroad carfloat to the New York Central and to New York for PRR delivery just as was true of such cars in MD-12.

[35]

The 80 loaded cars remaining in MD-18 upon departure from Waverly Yard, of which 51 cars contained Southern-Official traffic, were delivered as follows: 55 cars to the New Haven by carfloat on five different days, 20 cars to the Long Island by carfloat and the remaining 5 cars by water for Pennsylvania Railroad delivery in New York City.

In view of the substantial number of cars included in MD-18 which were interchanged to other Eastern lines, I have included in Exhibit K a table showing the disposition, by states, of the cars interchanged through Greenville Yard to the New Haven and Long Island railroads. In all, 75 cars, of which 49 originated in Southern Territory, moved to 41 different destinations in New York, New England and Canada. This distribution is significant because it demonstrates that whereas the operation of Train MD-18 on the Pennsylvania was a continuous through movement as far as Waverly Yard, the cars included in that train were thereafter widely dispersed by other Eastern lines throughout New York State and New England.

Train MD-1

My Exhibit L is a schematic diagram of Train MD-1, operated from Greenville Yard, Jersey City, N. J., to Potomac Yard arriving on March 16, 1956. Primarily, MD-1 is operated to provide service on cars from New England and Canada received by the Pennsylvania from the New Haven. However, it also includes cars from the Long Island Rail Road moving via Greenville Yard and from other connections via Waverly Yard.

[36]

In this instance the most significant operating condition, and one which, of course, substantially affects the costs of Eastern lines, is the extent of the carfloat service necessary to the prior gathering of the cars from which the train is assembled. The table on the bottom of Exhibit

L indicates the states and number of stations originating the loaded cars received in the Jersey City area which were thereafter made up into the consist of Train MD-1. This table shows that the 51 loaded cars originating in the United States came from 36 different stations in 7 states and required the services of a number of other Eastern carriers. In addition, MD-1 also included 36 empty cars for Southern connections, the offline origins of which could not accurately be determined by this study on the Pennsylvania. Certainly many additional locations and services would be involved in gathering those empty cars for return South.

While most of the traffic of Train MD-1 was received from connections via Greenville or Waverly Yards, it should also be noted that individual cars of Southern traffic were moved into Waverly from Perth Amboy and also picked up en route at New Brunswick, so that the consist of MD-1 on arrival at Potomac Yard was 76% Official-Southern traffic as compared to 63% of such traffic upon departure from Greenville.

Train MD-6

Exhibit M is a diagram of the operations and distribution of cars of Train MD-6 operated from Potomac Yard to Greenville Yard on

[37]

March 16, 1956. As previously stated, Train MD-6, like Train MD-18, has as its primary mission the expedited movement of Southern traffic to New England and Long Island Rail Road destinations. The table on Exhibit M shows that the cars included in the consist of MD-6 were ultimately delivered by Eastern connections of the Pennsylvania at 34 different destinations in six states, with additional cars moving on to Canada.

Of the 135 cars, virtually all loaded cars handled in Train MD-6 to Greenville, 93 cars, or 70% of the consist, were of Southern-Official traffic involved in this proceeding.

All but two of the cars in this train moved to points beyond Greenville Yard by carfloat service of the New Haven and Long Island Railroads. Inasmuch as the carfloats to the New Haven each have a maximum capacity of 19 to 22 cars, dependent upon the length of the cars, while those used in the water service to Long Island City for Long Island Rail Road delivery have a maximum capacity of 17 to 19 cars, it is obvious that the consist of MD-6 required a number of moves across New York Harbor at the high costs traditionally associated with such water service. And Train MD-6 is, of course, not the only Pennsylvania Railroad train furnishing cars for interchange at Greenville by carfloat service to connections.

It should again be noted with respect to Train MD-6 that, like Trains MD-12 and CS-1, among others, the need for expedited handling of the traffic consigned to this train requires that it be relayed through the intermediate terminals, such as Baltimore, Philadelphia and

[38]

Newark, shown on Exhibit M. As a consequence, additional trains must be scheduled to provide service at those intermediate points and the requirement for expedited handling is, of course, equally applicable to the northern connections of the Pennsylvania on this study traffic. For example, 20 of the Southern-Official cars interchanged from MD-6 by water to the New Haven contained perishable commodities for delivery in Boston, Mass., hence requiring an expedited movement on that carrier and again imposing additional burdens upon the other service of the New Haven at points intermediate to Boston.

Train MD-13

My Exhibit N is a schematic diagram of Pennsylvania Railroad Freight Train MD-13, operated from Greenville Yard to Potomac Yard. Like Train MD-1 previously described in my Exhibit L, MD-13 received most of its consist

from connections by carfloat. As shown by the table contained in the exhibit, the Official-Southern traffic included in this train originated at 17 different locations in New York and six New England states and an additional station on the Long Island Rail Road. Departing from Greenville Yard, MD-13 contained 55 loaded cars and 25 empty cars, of which 30 loads and 8 empties were Official-Southern traffic. Of the latter, 3 empties were received from the Long Island, 27 loads and 5 empties from the New Haven, 1 load from the BEDT, 1 load from Bush Terminal Docks and 2 loads originated at Greenville. Additional cars, including Southern traffic, were picked up en route at Waverly Yard, some of which originated at points on

[39]

the Erie and Lehigh Valley. Two loaded cars for the south were also added to MD-13 at Philadelphia. Upon arrival at Potomac Yard, MD-13 contained 45 loaded cars and 19 empties, of which 42 loads and 14 empties, or 96% of the total consist, were delivered to Southern connections.

While Train MD-13 performed more intermediate service than did MD-1, to which its operations are quite similar, it is again important to point out the onerous nature of the service necessary to assemble this train at Greenville. Not only did the traffic originate at numerous locations on various connecting lines but a substantial part of the consist of this train moved to Greenville in costly New York Harbor water service.

Train BP-2

Exhibit O is a diagram, prepared in a manner similar to those previously described, of Train BP-2, dispatched from Potomac Yard to Philadelphia on March 16, 1956. This train affords an example of the service which must be provided to intermediate terminals that might otherwise be performed by trains from the same origin terminal to a more distant destination were it not necessary to relay the

latter trains through the intermediate terminals in order to provide more expedited service.

BP-2 is one of the trains established primarily to provide service to and from Philadelphia, particularly on perishable traffic from the South. This train is so scheduled that such perishable traffic arrives in Phila-

[40]

delphia in time to meet the demands of the produce trade. The operation of BP-2 and of similar trains serving Baltimore and Camden, N. J., from Potomac Yard permits the through movement of trains MD-12, MD-18 and MD-6, previously described, to the New York area by relieving those trains of intermediate work. Like those trains, BP-2 moves to the Wilmington and Philadelphia areas billed for delivery at widely separated points.

Exhibit O shows that cars for Wilmington, points on the Delmarva Peninsula and for the Eastern zone extending to Chester, Pa., were set off at Edgemoor Yard (Wilmington) for further movement to those areas. Similarly, some of the traffic moving through to Philadelphia in BP-2 moved out in local trains to such points as Pottstown and Coatesville, Pa. Other cars from the study train including those of Southern origination were moved from Philadelphia for interchange to other Eastern lines.

The Delmarva Peninsula relies upon trains such as BP-2 to receive commodities from the South. The distribution of such traffic in that territory invariably requires extensive local freight service. Outbound traffic for the East originated at stations on the Peninsula also moves in BP-2 after assembly at Edgemoor Yard.

Exhibit O gives some indication of the extensive and costly terminal operations required to effect delivery within the metropolitan areas of large cities such as Philadelphia. It was impossible, however, in this chart, and even more so in my other exhibits showing the over-the-road movement of the study traffic, to accurately portray the extensive ter-

[41]

minal service required to gather and distribute cars simply shown on these exhibits as originated or terminated at a given terminal.

Train BP-5

Exhibit P shows in chart form the movement of Train BP-5 operated from South Philadelphia to Potomac Yard arriving on March 16, 1956, together with the trains associated in the movement of the cars contained in the study train. This train is the counterpart, in the reverse direction, of Train BP-2 shown in Exhibit O.

Train BP-5 departed from South Philadelphia with 45 loaded and 12 empty cars, of which 33 loads and 8 empties involved Official-Southern traffic. Of particular significance, however, is the extensive service required to assemble traffic for this train both at the origin, Philadelphia, and at Edgemoor Yard, where cars for BP-5 were added en route. As shown, the origin area for BP-5 extended to Trenton, N.J., and nearby Pennsylvania points, such as Fairless. In addition, traffic originated in the Schuylkill Valley section, Mount Carbon and points intermediate also moves southbound from Philadelphia in this train. At Edgemoor Yard at Wilmington, BP-5 picked up Southern traffic originated on the Delmarva Peninsula at a number of different points and moved in a network of trains to that yard for pick up by BP-5. As shown, this service extended to the very extremity of the Peninsula, Cape Charles and across Chesapeake Bay by carfloat, a distance of 26 miles, to Norfolk, Va.

At one time or another during its operation a total of 99 cars were

[42]

included in the consist of Train BP-2. Upon arrival at Potomac Yard there were a total of 51 loaded cars and 25 empty cars, of which 37 loads and 15 empties were delivered to Southern connections.

In my opinion, based both upon my experience and observations over many years, and upon the studies just described which very clearly corroborate my views, it is clear that, at least so far as Eastern railroads are concerned, and I know of no radical differences on Southern lines, the Official-Southern interterritorial traffic here involved is an inseparable part of the whole, and possesses no transportation characteristics which are distinguishable from those of traffic generally. Not only does this interterritorial traffic utilize the transportation facilities of Eastern railroads in the same manner as other traffic but, even where it is possible to identify the former by tracing it to particular trains, it is found that both those trains and other trains must be operated in a coordinated manner and for the benefit of each other so that it is impossible to determine the costs of handling traffic in one train without consideration of the costs of other related trains.

In view of the coordinated and interrelated nature of railroad operations in the East, it is my considered opinion that the following conclusions may properly be drawn:

1. A car of Official-Southern interterritorial traffic has available to it and utilizes to the same degree as any other car irrespective of origin

[43]

or destination, the transportation facilities and services of Eastern railroads.

2. Eastern lines' handling of Official-Southern interterritorial traffic is no less complex than that of traffic generally, since differences in the territorial location of origins and destinations in no way alter the transportation characteristics and requirements of the traffic within Eastern territory.

3. Official-Southern traffic is not transported independently of other traffic but rather is so commingled with such traffic on Eastern lines that it is erroneous to conclude that Eastern lines' costs of handling Southern traffic,

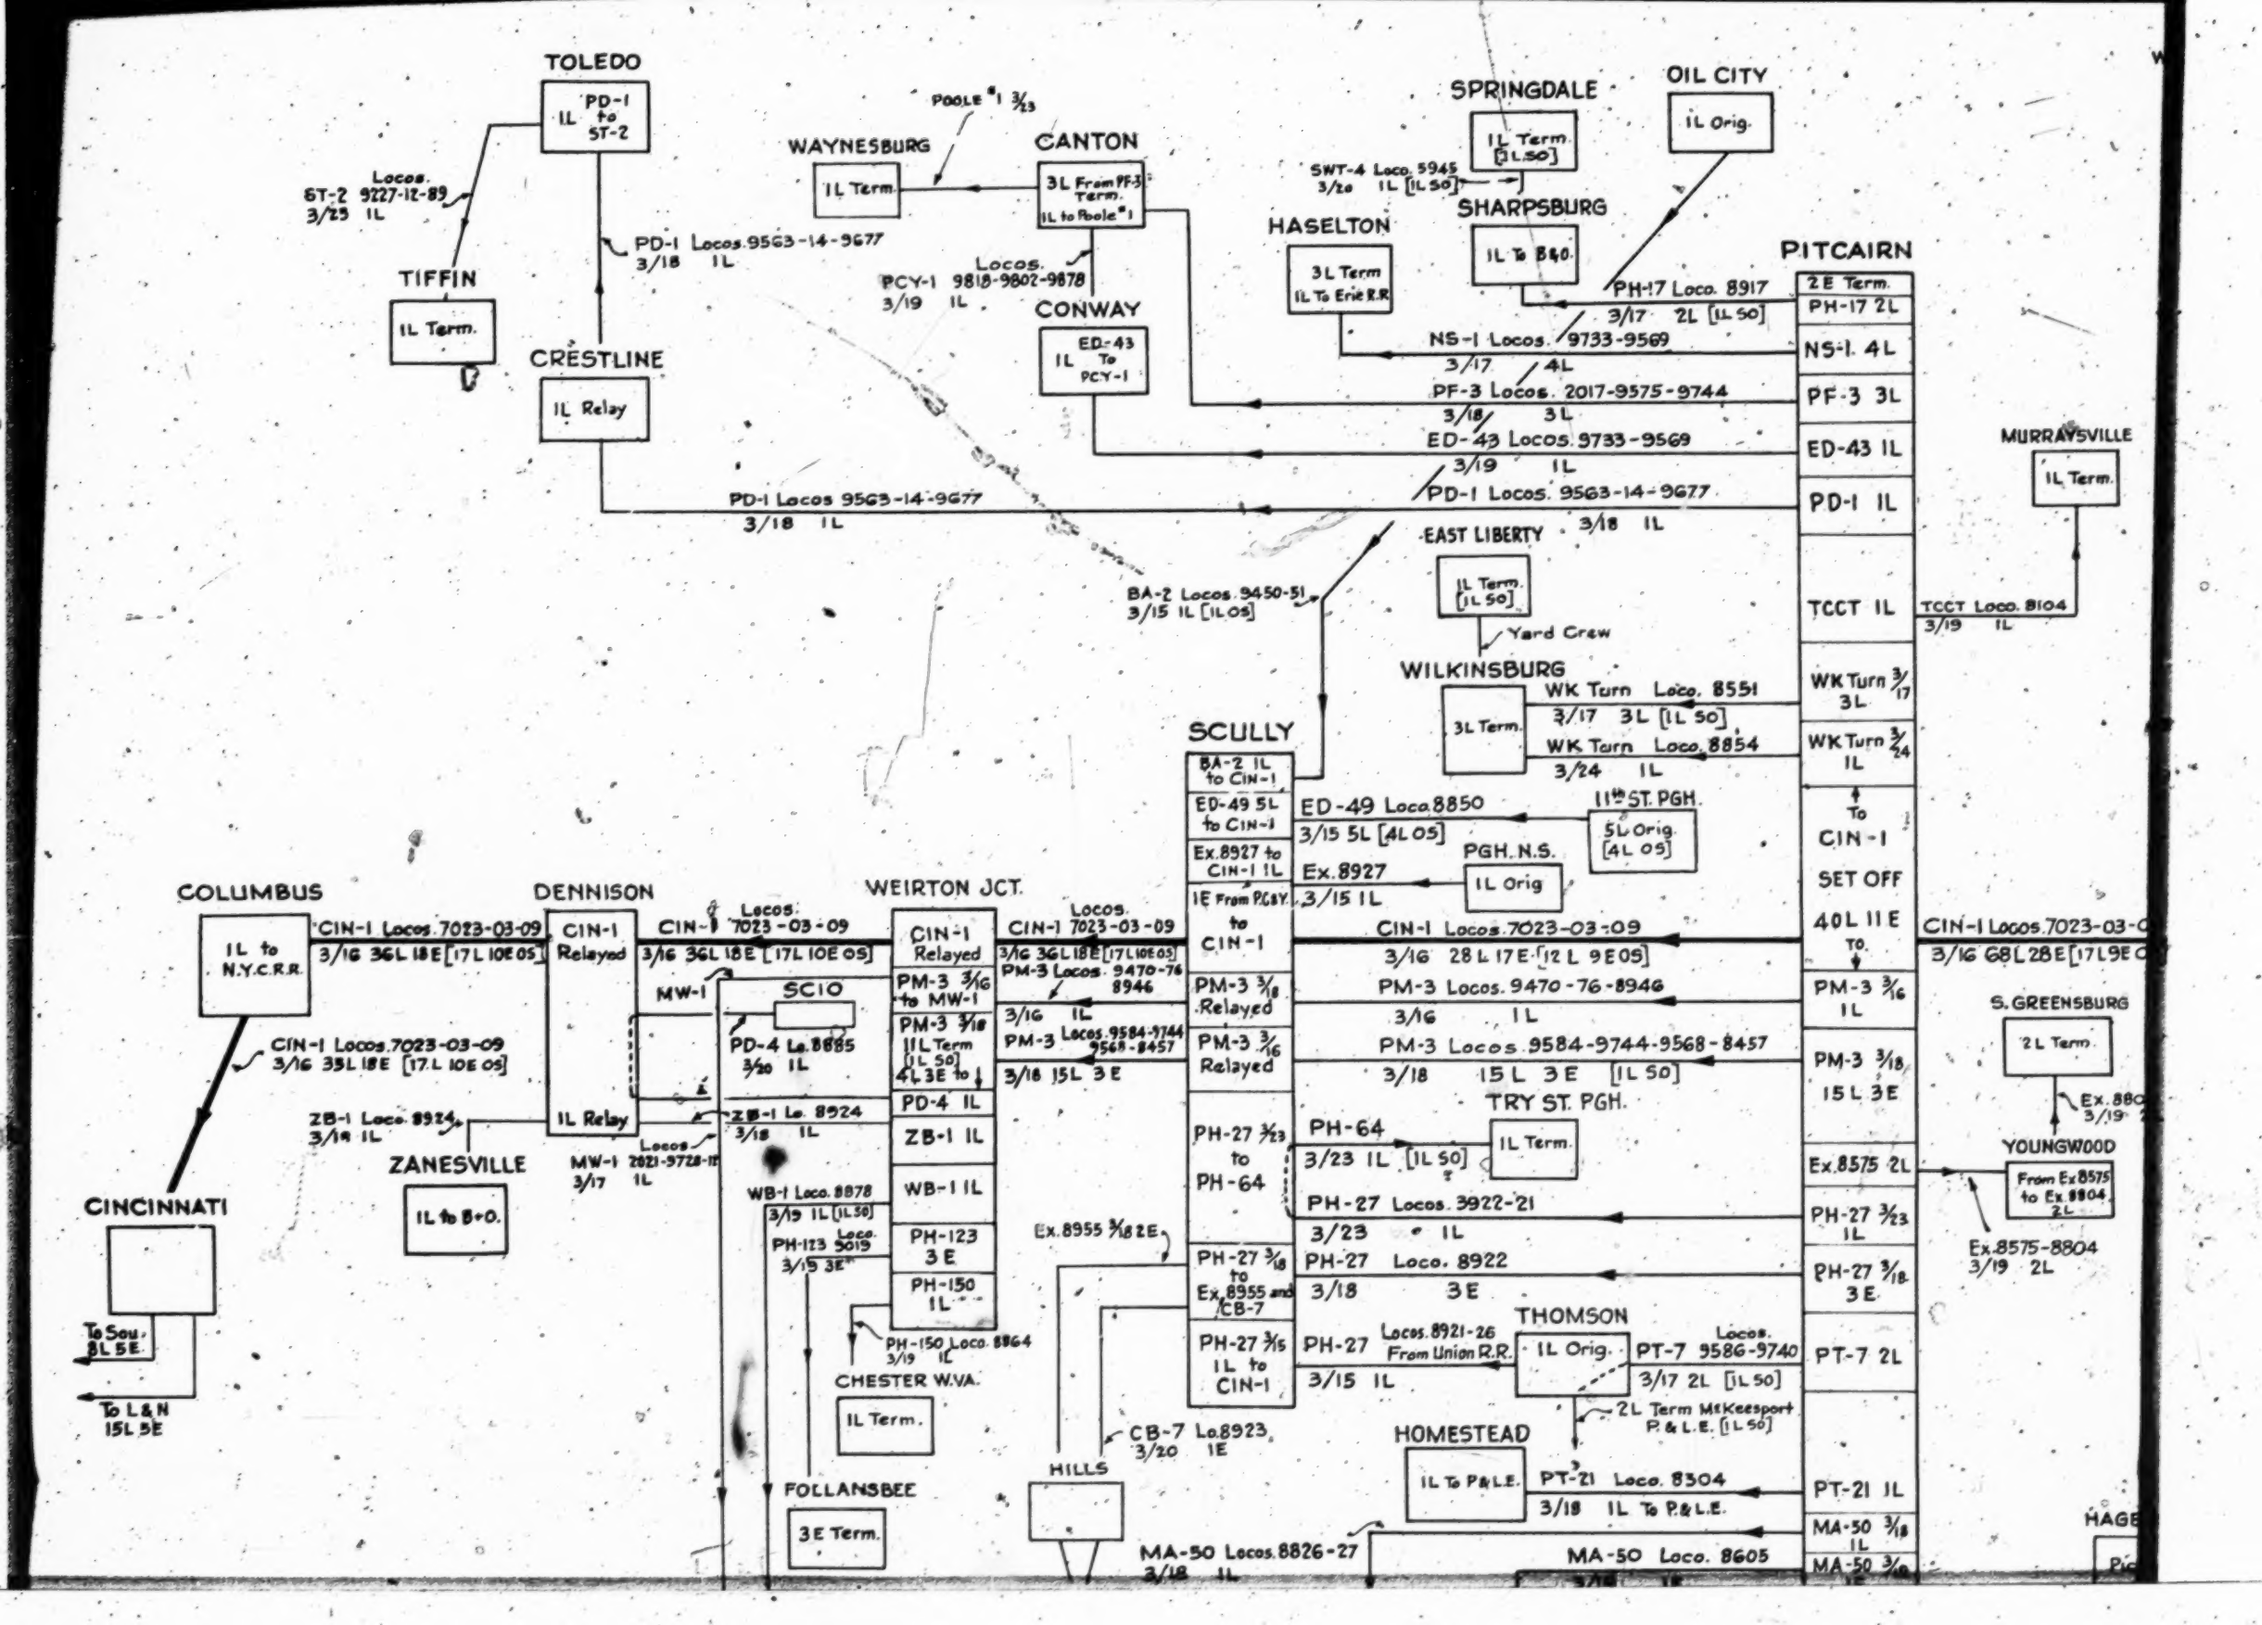
if possible of determination, are any different from their average costs of handling traffic generally.

4. Official-Southern interterritorial traffic, by virtue of its integration into the general traffic pattern, receives substantial cost benefits as a consequence of the existence of the other traffic with which it is merged for transportation. Clearly, were it not for the handling of North-South cars on the Eastern railroads as part of a greater and virtually indistinguishable mass, the costs of providing service on Southern traffic as a separate transportation entity would be very substantially greater than is the case where the lower unit costs resulting from volume operations are shared by the Southern cars.

5. The services rendered by Eastern lines on Official-Southern interterritorial traffic creates corresponding burdens upon the other traffic handled by those lines, the costs of which are completely ignored

[44]

when attempt is made to compartmentalize the service costs of the particular segment of traffic.



In summary, therefore, it is my considered judgment that any effort to segregate Eastern lines' costs in handling Official-Southern traffic is highly impractical and cannot be meaningful in view of the impossibility of measuring the cost effect of the inevitable interrelation of all traffic, that is, both the burdens cast upon other traffic by the handling of Southern traffic and cost savings shared by Southern traffic as a consequence of the existence of other traffic. In my opinion Eastern lines are fully justified in attributing to the Official-Southern traffic the average costs of handling all traffic. I believe that my testimony and exhibits fairly demonstrate that the involved interterritorial traffic is average traffic (except in relation to heavy-volume coal and ore traffic) judged by every criterion of service, and hence may properly be measured by the Eastern District and Southern Region costs attributed to all traffic.

Exhibit A:

TRAIN UTILIZATION STUDY

VERIFIED STATEMENT NO. 14
OF HARRY A. DeBUTTS

[12]

Passenger Deficits

In view of the Northern lines' reliance upon over-all figures, including composite rates of return for a group of railroads, the tremendous effect of passenger deficits upon such data must be considered and understood.

It is essential to an understanding of the passenger problem that it be realized that the deficits associated with intercity passenger service must be sharply distinguished from the deficits also incurred by some roads in providing suburban service within certain metropolitan areas in the North. They are separate types of operations, both physi-

[13]

cally and in the problems which they present.

Intercity passenger service is, in large part, performed over the same tracks, bridges and other facilities as are used in freight service. As a result, an important portion of passenger costs represents the allocation of costs common to freight and passenger service.

However, elimination of all intercity passenger trains experiencing out-of-pocket losses will not eliminate the reported passenger deficit. The passenger deficit will still reflect the large portion of carrier costs which would continue in any event if all passenger service ended. Under such circumstances, the intercity passenger deficit is treated as a burden to be recovered from the freight service. This becomes largely a matter of terminology, since the freight service is paying for the use of the common facilities that must be maintained for freight service in any event.

Suburban service deficits present a very different problem. The magnitude of this problem has not been shown in

detail, however, because the passenger deficits reported to the Commission for roads performing suburban service do not show separately the costs, revenues and deficits in suburban service. Intercity and suburban passenger operations are merged into a single passenger deficit figure.

* * *

[15]

The aggregate effect of the suburban service deficits and the entire passenger deficit for the Northern roads as well as the effect of the passenger deficit of the Southern roads is shown in Exhibit E, attached. These figures show that, apart from suburban service deficits, the passenger deficit for the Northern lines is not a greater but a lesser burden on earnings from freight service than is the case with the Southern lines.

The separate and extraordinary character of the suburban service causing these substantial deficits, as distinguished from freight and intercity passenger service, was also shown by the Northern roads in their presentation to the Senate Committee (pages 15-16):

> "Another vitally important feature of railroad suburban service is the subject of wide misunderstanding by the public. This is the extent of railroad investment and railroad costs represented by fixed facilities, such as track. It is a widely held but entirely false belief that railroads use, for their suburban and commutation services, primarily those roadway facilities which they must necessarily have and maintain for their other operations. The disastrous corollary to this false belief is that little, if any, in the way of operating expenses on the roadway need be assigned or attributed to this service, and that the railroads do not have any substantial investment in these facilities on which, as private businesses, they should earn a fair and adequate return over costs.

[16] "These notions are completely false as applied to railroads handling a substantial volume of suburban passengers. Reference to Exhibit J exemplifies the situation which actually exists. It shows track occupancy by various types of trains in the twenty-four hours of a typical weekday of October 1958 on the line of the Pennsylvania Railroad between Overbrook and Bryn Mawr, Pennsylvania, which is a portion of one of that company's principal Philadelphia suburban lines. It will be noted that there are four main tracks in this territory. The outside tracks—No. 1 Eastbound and No. 4 Westbound—are used primarily by suburban trains; while the middle tracks (Nos. 2 and 3) are used primarily for through passenger and freight trains.

"The symbols appearing on the Exhibit for each of the three types of trains demonstrate immediately that all of the through passenger and freight trains could readily have been handled exclusively on two tracks only—in this case Nos. 2 and 3. It thus follows inevitably that one-half of the track facilities in this territory are maintained solely because of the company's suburban service operations. A far larger proportion of other roadway facilities, such as stations, terminals, coach yards and repair shops, are maintained solely in connection with the suburban service."

High wage costs and low utilization of equipment, due to the peak periods of morning and afternoon commuter travel on a five day week, are peculiar to suburban passenger service. The Northern roads have described these and other aspects of the "crushing burdens of rail suburban service losses" in their presentation to the Senate Committee.

* * *

[18]

This effort is implicit in the over-all company and regional average data, including rates of return, relied upon by the Northern lines. Nor was the effort left to implication. At page 14 of V. S. No. 7, Mr. Shannon, then speaking for the Northern lines and the New Haven, stated generally: "The people served by the New Haven's passenger operations form a substantial part of the producers and users of freight traffic to and from the South, as well as to and from other areas of the country"; reference is then made to the New Haven passenger operations as forming "a large part of its total operations". With a half of its passenger deficit accounted for by its suburban service deficit, this is an open effort to use the suburban service deficit in determining divisions of Official-Southern freight rates.

What such an approach means, very realistically, is that the Southern shippers, as the ultimate source of our revenues, are being called upon to subsidize the suburban service in certain Northern cities. This effort to burden freight service with suburban service deficits would be temporizing at best, as it would not go to the source of these essentially separate and localized deficits. Such an approach would seriously damage the Southern roads, with their greater dependence on revenues from Official-Southern traffic.

[19]

The Northern lines, having undertaken generally through their over-all company and regional data, and specifically through Mr. Shannon, to treat suburban service deficits as a burden on freight service, have now reversed their position since filing their statements in this proceeding in October 1959. They have come out strongly for the policy recommended by the Commission in their presentation in April, 1960, to the Senate Committee (pages 3-4 and 24):

"There are basically two things which Government—Federal as well as local—must assure for the railroads in Eastern territory now providing these loss-ridden suburban services. First, for those services which are deemed essential to a sound program of passenger transportation in metropolitan areas, the railroads involved must be assured fair and adequate compensation for performing those services, through any combination of (a) higher revenues through increased fares, (b) reduced expenditures, e.g., through tax relief, and (c) payments under long term contracts by Government authorities for the type and volume of service required by them. Second, wherever the public or the local authorities are unwilling to support a program of the above type for any suburban service, the railroads should be accorded full freedom to take any steps required by sound business judgment, including abandonment of the service and of the facilities used in the service.

"All of these facts demonstrate a critical need for complete revision of Government policy with regard to railroad suburban services. Largely through action by Government itself, there is no longer the slightest reason for expecting railroads to bear the

[20]

attendant responsibilities and burdens. If these suburban services are not to be completely abandoned, Government itself must assume responsibility for deficits necessarily incurred in providing them. The first question which this necessity poses is whether all levels of Government have a responsibility and, if so, to what extent should each level share in its discharge."

In thus adopting the approach previously recommended by the Commission, the Northern lines should be required to abandon their attempt to cover their local deficits out of interterritorial freight rates. It would be a distinct disservice to the real interests of the Northern lines for the Commission to act in conflict with its previously stated policy on the subject by relying upon over-all company and regional average data reflecting suburban service deficits in determining divisions of freight rates.

VERIFIED STATEMENT NO. 15
OF W. THOMAS RICE

[1]

My name is William Thomas Rice. I am President and a Director of the Atlantic Coast Line Railroad Company.

Following graduation from Virginia Polytechnic Institute in 1934 with a B.S. degree in Civil Engineering, I entered the service of the Pennsylvania Railroad in the Operating Department and held several positions before being called to active duty with the United States Army in 1942. Among my assignments while on active duty was the command of a portion of the Iranian State Railway. I am now a Major General in the Army Reserve Corps, serving as the Director General, Transportation Railway Service, and also as Civilian Aide to the Secretary of the Army for the State of Virginia.

Upon my return to civilian life, I entered the service of the Richmond, Fredericksburg & Potomac Railroad in February, 1946. I served as Superintendent of Potomac Yard, Superintendent at Richmond and General Superintendent prior to my election as President of Richmond, Fredericksburg & Potomac Railroad Company on January 1, 1955. I became President of the Atlantic Coast Line Railroad Company on August 1, 1957.

* * *

[25]

Conclusion

It is apparent from what I have said that if Coast Line is to be able to adequately handle the increased volume of traffic generated by the continued growth in the industrialization of the South, to maintain its facilities and equipment, to acquire additional specialized equipment, and to keep pace with the rapid technological changes in the railroad industry, it is essential that Coast Line not only retain

every cent of its present inadequate revenues but that it also receive its proper share of the revenues on Official-Southern Territory traffic.

VERIFIED STATEMENT NO. 16
OF JOHN W. SMITH

[1]

My name is John W. Smith. I am President and a Director of Seabord Air Line Railroad Company.

I graduated from the University of Maryland in 1921 with a BS Degree in Civil Engineering and shortly thereafter was employed by Seaboard Air Line Railway Company in construction work and held several positions in the Maintenance of Way Department, including that of Division Engineer. Subsequently, I held positions of Division Superintendent, Assistant Chief Engineer, Assistant General Superintendent, Assistant to President, Vice President-Administrative, and in 1952 became President of Seaboard Air Line Railroad Company.

The Seaboard is one of the principal trunk line railroads in the Southeast. It operates 4,147 miles of road in the States of Virginia, North Carolina, South Carolina, Georgia, Florida and Alabama, serving the capital of each of these States. Its lines of railroad extend from Richmond and Portsmouth, Va. on the north to Atlanta, Ga., Birmingham and Montgomery, Ala., and Chattahoochee, Fla. (forming a through line with the L&N Railroad to New Orleans and the West Coast) on the west and to Miami and Tampa, Fla., via Jacksonville, on the south. It serves all major South Atlantic Ports and the Ports of Tampa and Boca Grande on the Gulf.

* * *

[7]

A factor which is having a decided effect on freight car requirements and utilization has been the postwar swing of industry generally from the six-day to a five-day week which has the effect of increasing by one day a week the idle time of cars awaiting loading or unloading.

Expenditure of the aforementioned very substantial sums for improvements in plant and equipment has promoted more efficient operations by the Seaboard as indicated by the following comparisons:

(a) Gross train load in 1959 was 56 per cent greater than the 1947-1949 average.

Gross ton miles per train hour increased 66 per cent during that period.

(b) The average number of employees decreased from 19,270 in 1946 to 12,305 in 1959 notwithstanding a substantial increase in volume of traffic handled. However, average annual wages paid employees increased during that period from $3,051 to $6,179 so that while the number of employees decreased 36 per cent, the average annual wages increased 103 per cent.

(c) Man hours on track maintenance work per million gross ton miles decreased from 238 in 1946 to 61 in 1959. Mechanization of all roadway maintenance work was primarily responsible for this improvement.

* * *

[16]

The South is developing more rapidly than almost any other section of the United States. If the Southern railroads are to keep pace with the growth of the territory they serve, it is imperative that they have the funds necessary to continue to expand and modernize their plants and facilities. In no other way can they render adequate service or hold their own in the competitive struggle for traffic. A large part of the revenue of the Southern railroads is derived from the traffic involved in this case and the Commission's decision will therefore vitally affect their future and their ability to render the service of which they are capable and which the public has the right to expect.

VERIFIED STATEMENT NO. 17
OF WILLIAM H. KENDALL

[9]

In order to obtain a true picture of our performance in recent years, it is necessary to restate our net railway operating income and rate of return figures to eliminate the temporary and distorting effect of the tax deferrals resulting from the accelerated amortization of defense projects. These tax deferrals and their effect on our net operating income and rate of return are shown fully in Exhibit F. A summary of the results are shown in the following table:

Year	Net Railway Operating Income Restated Excluding Tax Deferrals	Rate of Return Restated
1955	$23,274,896	3.46%
1956	24,116,310	3.51%
1957	19,065,764	2.80%
1958	17,021,172	2.46%
1959	18,962,788	2.65%

Conclusion

The rapidly expanding economy of the South is continuing to make tremendous demands on the Louisville and Nashville Railroad and other southern railroads for more efficient and flexible services to handle the traffic generated by industrialization and for more specialized services to satisfy the requirements of our shippers.

The Louisville and Nashville Railroad has been compelled to increase debt to finance the extraordinarily heavy capital expenditures required for expanding and modernizing our railroad properties to control costs

[10]

and provide necessary transportation service. And this has occurred during a period when intense competition from other forms of transportation has compelled drastic rate

reductions on a wide variety of commodities and rising wage and material costs have further narrowed our already slim profit margins. Our debt and expenditures for improvements have increased, while our revenue per ton mile, net railway operating income and rate of return have declined to perilously low levels despite our determined efforts to reverse the adverse trends.

All of these factors show a compelling need for additional revenues for the Louisville and Nashville Railroad.

VERIFIED STATEMENT NO. 26
OF E. LYMAN

[51]

A comparison of the total number of cars moving through the various primary divide points taken from Witness Wolford's V.S. No. 11 with those moving through these points but not interchanged, that is, those cars involved in the interior break issue, shows:

Divide Points	Total Cars	Cars Not Interchanged	
		Number	Percent of Total
Cairo) Metropolis)	74,514	65,470	87.9
Thebes-Gale)			
E. St. Louis	55,767	11,005	19.7
Evansville	29,342	5,269	18.0
Louisville	90,538	5,099	5.6
Grand Total	967,554	86,843	9.0

As shown in Exhibit B, a shift in the break points from those presently in use to the points of interchange on traffic interchanged at interior Illinois and Indiana junctions would cost Southern Lines $2,743,675 per year on the traffic involved herein. This sum, however, does not fully indicate just what is involved in the Official Lines' contention that the primary break should be made at the points of interchange between Official and Southern Lines.

Exhibit B
Page 1

Revenue Study on Carload Traffic Between Points in Southern Territory and Points in Official Territory, including Illinois Territory, Interchanged Between Northern and Southern Railroads at Interior Points in Illinois and Indiana Based on Interline Settlements for Period July 1958-June 1959 inclusive.

VERIFIED STATEMENT NO. 28
OF L. T. ANDREWS

[29]

RICHMOND

The most important gateway for the interchange of traffic between Coast Line and Official Territory carriers is at Richmond, Virginia. At Richmond, Coast Line interchanges traffic directly with two Official Territory carriers, the Richmond, Fredericksburg & Potomac Railroad and with the Chesapeake & Ohio Railroad.

The interchange point between Coast Line and the RF&P is at Acca Yard, which lies north of the James River. Acca Yard is a joint yard of RF&P and Coast Line. The RF&P performs all switching of inbound and outbound Coast Line trains as well as the processing of the necessary clerical work on outbound trains. Forces in Acca Yard Office process waybills for interchange between the two lines. Inspection of cars, servicing of locomotives, etc. is performed for our account by RF&P. Certain tracks in the north side of the yard are assigned to Coast Line and Coast Line is billed for its proportion of the mainte-

[30]

nance cost, interest rental and taxes on these tracks as well as for the switching, clerical and mechanical services performed for our account on an agreed basis.

Interchange of northbound traffic is established at the time waybills are delivered by Coast Line Conductor to the RF&P Yardmaster's Office. Southbound, the interchange of traffic from RF&P to Coast Line is established at the time when outbound inspection of our train is completed. Normally there are four Coast Line trains interchanged to RF&P daily and four trains received from the RF&P daily.

While traffic in main line freight trains is interchanged to RF&P Railroad upon arrival of the trains at Acca Yard and delivery of waybills to the yard office, it is likewise nec-

essary that traffic from our South Richmond Yard be interchanged to the RF&P. This service is performed by Coast Line yard engine. A considerable amount of this traffic is received from the C&O. Cars received from the RF&P for transfer between Acca Yard and South Richmond Yard are likewise handled by a Coast Line switch engine. As in the reverse direction, a considerable amount of this traffic is for delivery to the C&O.

Transfer traffic is delivered to the RF&P in the north side of Acca Yard and traffic received from the RF&P for transfer to South Richmond Yard is received from the RF&P in the south side of the yard. The transfer engine delivers traffic to the RF&P at Acca at 1:31 P.M. and 4:00 A.M., the former delivery being daily except Sunday. We receive traffic from the RF&P at 4:00 A.M. and at 1:00 P.M., the latter delivery being daily except Sunday. Traffic delivered to and received from the RF&P is inspected by Coast Line inspector before departure on the northbound trip and after arrival at South Richmond Yard on the southbound trip. This traffic is also inspected before departing and/or upon arrival at Acca Yard by car inspectors located at that point.

Waybills covering traffic delivered to the RF&P are processed by clerical forces assigned in Coast Line's South Richmond Yard. Waybills for traffic received from the RF&P are processed by yard forces assigned in Acca Yard.

Traffic for movement from Acca Yard to Coast Line's South Richmond Yard is interchanged from RF&P to Coast Line after arrival of RF&P trains at Acca and interchange time is established when inspection on the cars has been completed.

Coast Line performs switching for account of the RF&P at Sunnyside siding located between Acca Yard and Pier 5. In each case where switching is performed at this point, Coast Line is paid a switching charge by the RF&P.

Interchange with the C&O is made on the interchange track of Second Street connection on the north side of the James River opposite the Coast Line's South Richmond Yard which is located near the south bank of the James River on the line from Falling Creek to South Richmond via Clopton. The interchange track branches off Coast Line's old main line toward the west just north of the James River. The extreme west end of the interchange track connects with the C&O main line about ¼ mile west of the Second Street Yard Office. The interchange track will hold approximately 35 cars; however, we can deliver up to 100 cars to the C&O by utilizing Coast Line's connecting track extending onto Coast Line's James River Bridge. The C&O likewise permits cars to hang out on their track which leads from Second Street connection to their main line. The interchange track with the C&O is located about 6 miles from our main line junction point at Falling Creek. We deliver traffic to the C&O at 6:59 A.M., 9:00 A.M., 1:30 P.M., 10:00 P.M. and 11:59 P.M. The 9:00 A.M. delivery is a special delivery of traffic which arrives at "FA" in our Train 112 and the Acca-Weldon turn for the purpose of connecting with C&O Train 91. The 10:00 P.M. delivery is designed for connection with C&O Train 95 and traffic interchanged at this time arrives "FA" in our Train 210. Usually on the 9:00 A.M. and 10:00 P.M. deliveries, only loads destined to the West are interchanged with the C&O. We receive traffic from the C&O at 5:00 A.M., 11:00 A.M., 5:00 P.M. and 10:00 P.M.

A Coast Line Clerk goes to the C&O interchange track,

[33]

checks the cars received from that line and accepts waybills. Waybills covering traffic delivered to the C&O are placed in a box at a designated location by the yard crew delivering the cars to the interchange track. One car inspector is provided on each shift around the clock and this man is a joint employee of the C&O and Coast Line. In addition, we

have one car inspector assigned in Coast Line South Richmond Yard 6:00 A.M. to 2:00 P.M. and one car inspector assigned 10:00 P.M. to 6:00 A.M.; the expense of these employees being borne solely by Coast Line.

All traffic received from the C&O is inspected before it is delivered to Coast Line and all traffic delivered to the C&O is inspected by Coast Line at our South Richmond Yard before delivery is made.

The C&O dispatches an engine from the yard to the interchange track to pull cars delivered to them by Coast Line and their engine places cars on the interchange track for delivery to Coast Line. It may thus be seen that the C&O performs the same interchange service that Coast Line performs at this point.

PETERSBURG, VIRGINIA

At Petersburg, Virginia, Southern-Official Territory traffic is interchanged by Coast Line directly to the Norfolk & Western-Virginian Railway at two locations. The largest interchange point is at the tracks located a short distance

[34]

east of Appomattox Street station paralleling the N&W-Virginian main line, which will accommodate about 80 cars. Cars are likewise delivered to the N&W-Virginian on the A&J connection track which branches off to the west from Coast Line's old main line or Petersburg Branch at a point just south of Pocahontas Yard. The A&J connection track will accommodate 22 cars. The east end of this track ties into N&W-Virginian main line about ¼ mile west of Appomattox Street Station.

As a general rule Coast Line delivers traffic to the N&W-Virginian at about 3:00 to 4:00 A.M., 3:00 P.M. and about 11:00 P.M. A Coast Line yard engine assigned at Petersburg delivers all traffic to the N&W-Virginian. In the

reverse direction, N&W-Virginian yard engines deliver traffic to Coast Line on the same interchange tracks, but, in addition, N&W-Virginian eastbound trains sometimes pick up at Secoast.

The Norfolk & Western-Virginian Railway delivers traffic to Coast Line at three different locations within the Petersburg area. The heaviest point is Secoast, which is approximately ½ mile from the midpoint of Coast Line's Collier Yard. The interchange track at this location will accommodate about 70 cars. Only eastbound through freight trains set off traffic at the Secoast connection track. Traffic is delivered to Coast Line at Secoast by the N&W-Virginian on an average of 5 times per day. Normally, delivery is made at 1:30 A.M., 9:30 A.M., 12:00 noon, 8:00 P.M. and 9:30 P.M. Traffic received from the N&W-Vir-

[35]

ginian at Secoast is normally inspected by Coast Line car inspector.

Traffic originating on the N&W-Virginian in the Petersburg area and that which arrives in Petersburg in westbound trains is delivered to Coast Line at the regular interchange track located a short distance east of Appomattox Street Station or at the A&J connection track just west of Appomattox Street Station. The N&W-Virginian car inspector inspects traffic delivered in the Appomattox Street area. Deliveries are received from the N&W-Virginian in the Appomattox Street area at about 7:00 A.M., 9:00 P.M., 11:30 P.M. and 1:00 A.M.

Waybills are processed by Coast Line at Collier Yard on traffic for delivery to the N&W-Virginian. On traffic delivered to Coast Line by the N&W-Virginian, waybills are processed by that line. Delivery time of traffic to Coast Line at Secoast is established at the time the eastbound through freight trains set off at that point and waybills are placed at a designated location. Delivery time is established at

A&J connection and/or interchange track in the Appomattox Street area at the time the traffic is placed on those tracks and waybills are delivered to Coast Line.

The interchange time for traffic delivered to the N&W-Virginian by Coast Line is established at the time of placement of cars on interchange track and delivery of waybills to the N&W-Virginian Yardmaster's Office. Waybills

[36]

covering traffic set off at Secoast interchange track are picked up by our yard engine foreman and are returned to Collier Yard, where they are processed. On cars delivered to the Norfolk and Western-Virginian, our yard engine foreman takes the waybills to the N&W-Virginian Yard Office. On traffic received from the N&W-Virginian in the Appomattox Street area, waybills are placed in a bill box at "RS" Tower.

JARRATT, VIRGINIA

At Jarratt, Virginia, Southern-Official Territory traffic is interchanged with the N&W-Virginian Railway.

Coast Line delivers traffic to the Norfolk & Western-Virginian in the N&W-Virginian's yard, the east end of which is about 300 to 400 feet west of Coast Line main line. The N&W-Virginian yard parallels the north side of the N&W-Virginian main line. The yard has 3 tracks which vary in capacity from 30 to 38 cars per track. Traffic is interchanged to the N&W-Virginian normally between 3:00 and 4:00 P.M., 8:00 and 9:00 P.M. and at about 2:30 A.M. The interchange is made by main line freight trains as there are no yard engines assigned at that point.

The N&W-Virginian Railway delivers traffic to Coast Line on an interchange track which parallels the Coast Line main line beginning at a point north of the N&W-Virginian crossing and on the west side of our main line. The

[37]

capacity of this track is about 100 cars. The N&W-Virginian delivers to Coast Line at 10:00 A.M., 2:00 P.M., between 10:00 P.M. and 11:00 P.M. and between 1:30 A.M. and 5:30 A.M. The N&W-Virginian deliveries are made by their freight trains as the N&W-Virginian does not have yard engine service at Jarratt either.

Coast Line has no car inspectors assigned at Jarratt, but the N&W-Virginian has a car inspector who inspects certain traffic delivered to the N&W-Virginian by Coast Line.

Waybills for traffic delivered to the N&W-Virginian are processed by Coast Line forces at Jarratt and bills are delivered to the N&W-Virginian Office. The N&W-Virginian forces are supposed to deliver waybills to Coast Line covering traffic received from that line; however due to the fact that there is an interlocking plant located at Jarratt, Coast Line forces normally pick up the N&W-Virginian waybills so as to prevent the necessity of leaving the interlocking plant unattended.

Delivery time for the interchange is established in both directions at the time when cars are placed on the interchange tracks and waybills are ready for delivery to the other road. The interchange facilities at Jarratt are not always adequate to accommodate the number of cars to be interchanged between Coast Line and the N&W-Virginian. Since the Coast Line delivers a large number of cars to the

[38]

N&W-Virginian on occasions and the N&W-Virginian yard is not of sufficient size to accommodate all of the traffic, it is often necessary for us to place traffic in the N&W-Virginian pass track. In the reverse direction, on occasions large numbers of empty hopper cars are received from the N&W-Virginian, having been released from coal movement, and it is sometimes necessary that the N&W-Virginian place such cars in the Coast Line's pass track.

SECONDARY GATEWAYS FOR INTERCHANGE WITH OFFICIAL TERRITORY CARRIERS

As previously stated Portsmouth and Suffolk, Virginia, are secondary gateways through which Coast Line interchanges Southern-Official Territory traffiic with Official Territory carriers.

The Official Territory carrier involved in the direct interchange of traffic with Coast Line at Suffolk is the N&W-Virginian Railway.

The interchange track of Coast Line and the N&W-Virginian Railway is located between the Coast Line Yard and the N&W-Virginian Railway Yard, approximately ¼ mile south of the Coast Line Freight Office and ¼ mile from the N&W-Virginian Railway Yard Office. The interchange track has a capacity of approximately 7 cars. Coast Line normally delivers traffic to the N&W-Virginian Railway between 10:00 A.M. and 12:00 noon and receives traffic from the N&W-Virginian Railway about noon. The interchange occurs at the time the cars are placed on the delivery

[39]

track and waybills are ready for delivery. Interchange reports are prepared by the agency forces of each carrier. Waybills and interchange reports are delivered by Coast Line to the N&W-Viginian Railway Yard Office and the N&W-Virginian Railway delivers waybills to the Coast Line Freight Office. The N&W-Virginian Railway performs the same interchange service at Suffolk as is performed by Coast Line.

The N&W Virginian Railway also delivers traffic to Coast Line on an interchange track located just south of the Coast Line-N&W-Virginian Crossing about ¼ mile north of the Coast Line's Freight Office. The interchange track connects the Coast Line main line and the N&W-Virginian main line and has a capacity of approximately 30 cars.

Coast Line interchanges to N&W-Virginian on an interchange track located just north of the Coast-Line N&W-Virginian main lines. This track has a capacity of about 22 cars. N&W-Virginian delivers to Coast Line about 11:00 A.M. daily, except Sunday, and Coast Line delivers to N&W-Virginian between 10:00 A.M. and noon and about 3:30 P.M., the latter delivery being daily except Sunday. During the season of heavy peanut movements, Coast Line frequently makes 3 or 4 deliveries a day to N&W-Virginian. Occasionally the N&W-Virginian also makes an additional delivery to Coast Line. Coast Line and N&W-Virginian agency forces alternate weekly in handling waybills and in-

[40]

terchange reports between the Coast Line Freight Office and the N&W-Virginian Freight Office. Each line prepares an interchange report for the cars delivered, using the actual time the cars were placed on the interchange track as the established delivery time.

Interchange is made with the Atlantic & Danville Railway at Suffolk on the interchange track located adjacent to the main lines of both railroads just south of the Coast Line's freight station. This interchange track, with a capacity of 5 cars, connects the Coast Line yard with the A&D yard. Coast Line interchanges to the A&D between 10:00 A.M. and noon daily, except Sunday, and the A&D interchanges to Coast Line about noon daily, except Sunday. Freight agency forces of each line make interchange reports covering cars delivered, inserting the actual time the cars were placed on the interchange track as the delivery time. Bills and interchange reports are delivered by agency forces between the freight offices of the two lines.

Cars moved into Suffolk by Coast Line for delivery to the N&W-Virginian, or A&D for local delivery in Suffolk, are interchanged on switching order and the waybill is retired by Coast Line. Peanuts are handled to Suffolk by Coast Line on milling or storing in transit rates and when

this commodity moves outbound, even though it may not be billed for Coast Line handling, Coast Line agency forces prepare revenue waybills.

[41]

At Portsmouth, Virginia, Coast Line interchanges traffic to the Chesapeake & Ohio Railway, Norfolk & Western-Virginian Railway, Norfolk Southern Railway and the Pennsylvania Railroad through the Norfolk & Portsmouth Belt Line. Interchange reports covering all cars delivered to and received from the Norfolk & Portsmouth Belt Line are prepared by joint interchange clerks under the supervision of the Norfolk & Portsmouth Belt Line in its yard. Time of interchange is based on the actual time cars are placed on designated tracks in the Norfolk & Portsmouth Belt Line's yard. Interchange is made by yard engines.

Traffic is delivered to and received from the Norfolk & Portsmouth Belt Line in its yard which is located .7 of a mile from midpoint of the Coast Line's yard at Portsmouth. Track 5 with a capacity of 43 cars is the designated track for delivery of traffic to Coast Line and track 6 with a capacity of 45 cars is the designated track for delivery of traffic to the Norfolk & Portsmouth Belt Line for interchange purposes.

Generally, Coast Line makes four deliveries a day and the Norfolk & Portsmouth Belt Line makes three or four deliveries a day. On Sunday, one delivery is usually adequate to take care of the traffic which the Coast Line interchanges to the Norfolk & Portsmouth Belt Line.

[42]

Coast Line interchanges traffic directly with the Atlantic & Danville Railway at Portsmouth without the use of the Norfolk & Portsmouth Belt Line. Coast Line handles all cars for the Atlantic & Danville Railway's account at Portsmouth. We make up its outbound trains and switch its inbound trains. In addition, Coast Line handles its interchange movements. All billing of cars moving between Coast Line and A&D is handled by Coast Line employees.

If the traffic is ready, A&D cars are handled to and from interchange tracks along with Coast Line traffic by Coast Line yard engines. If the traffic is not ready when Coast Line deliveries are made, special moves are required for the handling of the A&D interchange traffic.

All loaded cars originating in the Norfolk-Portsmouth area on connecting lines for movement via Coast Line or A&D are delivered to Coast Line on switching order. All loaded cars for delivery in the Norfolk-Portsmouth area by connecting lines are delivered to connections on switching order. Waybills on inbound traffic are retired by Coast Line agency forces and waybills covering outbound traffic are prepared by Coast Line agency forces. Loaded through cars from Coast Line and A&D for movement via Chesapeake & Ohio Railway, Norfolk & Western- Virginian Railway, and Norfolk Southern Railway are handled by the Norfolk & Portsmouth Belt Line on switching order prepared by Coast Line agency forces. Through cars from these lines

[43]

to Coast Line and A&D are received from connections on revenue billing.

The Norfolk & Portsmouth Belt Line bases its switching charges on published tariffs for various commodities and bills Coast Line for cars handled for its account. Through cars for delivery to, or received from, the Pennsylvania Railroad move on revenue billing without switching order via the Norfolk & Portsmouth Belt Line and the Norfolk & Portsmouth Belt Line's bill covering the handling of such traffic is prorated between Coast Line and Pennsylvania.

Traffic interchanged between Coast Line and A&D is recorded by Coast Line yard clerks. The time of interchange is established when the cars are actually switched out of inbound trains or placed at the wharf for loading for account of the other line, or when orders are filled for empty equipment.

Waybills and switching orders are processed in the Coast Line freight agent's office between 8:00 A.M. and 5:00 P.M. At all other times waybills and switching orders are processed at Pinners Point Wharf Office by the Coast Line agency clerk on duty at that point.

All cars are given inbound inspection by Coast Line car inspectors on arrival at the yard at Portsmouth.

From the foregoing detailed description of the interchange services performed by Coast Line and the Official Territory carriers at Rich-

[44]

mond, Petersburg, Jarratt, Portsmouth and Suffolk, Virginia, it is readily apparent that the services performed by the Official Territory carriers and Coast Line at these gateways are absolutely equal. From an operations standpoint, there can be no justification for any assertion that the services performed by the Official Territory carriers are either more burdensome or more extensive than those performed by Coast Line at the same points.

VERIFIED STATEMENT NO. 29
OF J. N. BROETZMAN

* * *

[5]

GATEWAY INTERCHANGES WITH OFFICIAL TERRITORY CARRIERS

As previously stated, the principal gateways at which Seaboard interchanges traffic with Official Territory lines are Richmond, Petersburg, Alberta and Portsmouth, Virginia. The following description of the services performed by each carrier at those points is tendered to show that the interchange services performed by the Official Territory railroads are no more burdensome or time consuming than the services performed by the Seaboard. In several cases, the Seaboard's interchange services are actually more extensive than those of the Official Territory lines.

Seaboard interchanges Official-Southern Territory traffive at Richmond, Virginia with the Richmond, Fredericksburg & Potomac Railroad and the Chesapeake & Ohio Railway. The Seaboard also provides inter-

[6]

mediate service to accomplish interchange between the Chesapeake & Ohio Railway and the Richmond, Fredericksburg & Potomac Railroad.

All traffic interchanged between the RF&P and Seaboard at Richmond is handled between Acca Yard and Seaboard's Hermitage Yard by Seaboard engines and crews. Seaboard engines and crews deliver interchange traffic to RF&P at Acca Yard and move interchange traffic from the RF&P from Acca Yard to Hermitage Yard. These interchange movements usually involve long cuts of cars and 10 to 12 trips are made by Seaboard yard engines each day to handle the interchange traffic with the RF&P. The frequency of the movements is necessary to protect through

schedules and to handle the large volume of traffic interchanged.

Because of the fast and exacting schedules for the handling of important North-South traffic, Seaboard and RF&P have a special arrangement by which the locomotives which operate between Potomac Yard, Virginia and Hamlet, North Carolina on some of the through scheduled trains are pooled and Seaboard caboose cars are operated through between Potomac Yard and Hamlet on southbound train No. 27 and northbound train No. 280. This was done to eliminate the necessity of changing motive power and caboose cars at Acca or Hermitage Yard. The interchange on these trains is accomplished by Seaboard yard crews which move the arriving southbound RF&P train intact from Acca Yard to Hermitage Yard for manning by a road crew for expedited movement south. With respect to northbound train No. 280, the same arrangement is in effect in reverse. Seaboard road crews are relieved at Hermitage Yard and Seaboard yard crews deliver the train intact to the RF&P at Acca Yard.

While motive power and caboose cars are not operated through on

[7]

other trains, Seaboard train No. 86 remains intact except for the caboose and perhaps some Richmond cars to be cut off on the rear. The Seaboard yard crew mans the road engine, which remains attached to the head of the train and moves the train into Acca Yard promptly so as to meet schedule requirements. The Seaboard yard crew then brings the road engine back to Hermitage Yard and changes over to a yard engine to resume their regular work.

Also, because of the short time interval of these trains in the terminal, special arrangements have been made for the processing of waybills. Arrangements have been worked out with the RF&P for the interchange of waybill information by tape to card transmission between Hamlet, Hermitage and Acca Yard. Southbound, RF&P and Seaboard

receive waybill information by the tape to card process from Potomac Yard.

The interchange between the C&O and Seaboard at Richmond is accomplished on four interchange tracks located at Brown Street, approximately four miles south of Seaboard's Hermitage Yard and two miles from the C&O Yard. The C&O yard crews deliver on two of the tracks and Seaboard yard crews deliver to the C&O on the remaining two. Joint inspectors are employed at the interchange for the inspection of this traffic and each carrier bears its proportion of the expense of this inspection service. The southbound interchange traffic received from the C&O is normally moved by Seaboard switching crews from the interchange tracks to the Brown Street Yard, where they are classified and dispatched in southbound trains which pick-up the traffic at the Brown Street Yard. In some instances, the received traffic is moved to Hermitage Yard for placement in through trains there to avoid the necessity of the additional pick up at the Brown Street Yard. There are other occasions when deliveries by the C&O are late and the traffic must be moved to the South Yard at Richmond for consolidation with other

[8]

south cars for pick-up by through trains at that point. Seaboard also receives a substantial amount of livestock traffic from the C&O which must be switched and placed at the Union Stock Yard within three hours after receipt. This, in nearly every instance, requires a special trip by yard engines to make the placement on schedule.

The northbound traffic, which is principally bridge traffic handled by the Seaboard for interchange between the C&O and RF&P, is dispatched to Hermitage Yard and coordinated with other RF&P cars for delivery to the RF&P.

The interchange at Petersburg, Virginia with the Norfolk & Western-Virginian Railway is accomplished by yard crews of each line at designated interchange tracks

located between the Seaboard's and Norfolk & Western-Virginian Railway's tracks. A Seaboard car inspector at the interchange point inspects the cars received from and delivered to the Norfolk & Western-Virginian Railway.

Another interchange with the Norfolk & Western-Virginian Railway is located at Secoast, Virginia, approximately four miles south of Petersburg. This interchange is used to facilitate the through movement of important traffic. Traffic is set out on an interchange track located beside the Norfolk & Western-Virginian Railway's main line approximately one-half mile from the Seaboard's main line. Southbound Seaboard trains normally require approximately 40 minutes to make the pick-up at Secoast. However, when southbound trains picking up at Ryan meet or are to be passed by through trains, they must clear in the siding before doing their work, which involves from 15 to 30 minutes additional delay.

At Alberta, Virginia, Seaboard has another interchange with the Nor-

[9]

folk & Western-Virginian Railway. Interchange cars are handled by road crews of each line and inspection is made by the crews making the deliveries and receiving the traffic. Delivery to the Norfolk & Western-Virginian Railway is made on interchange tracks located beside their main line about one-quarter mile from Seaboard's main line. Seaboard's northbound trains make delivery in approximately 20 minutes, but southbound trains require 40 minutes to pull the cars to the connection and return through the Norfolk & Western-Virginian Railway's pass track. Interchanges are accomplished by road train crews and additional delays are often sustained when the delivering or receiving trains are required to clear the main line to permit other through movements.

At Portsmouth, Virginia, Seaboard interchanges traffic with the Pennsylvania Railroad, the Norfolk & Western-Virginian Railway, the Southern Railway, the Atlantic

Coast Line Railroad, and the Norfolk Southern Railway by means of the Norfolk & Portsmouth Belt Line as the intermediate carrier. The Norfolk & Portsmouth Belt Line performs all intermediate switching services necessary to accomplish the interchanges between railroads and all lines participate in the cost of operating the Norfolk & Portsmouth Belt Line on an equal per car basis.

VERIFIED STATEMENT NO. 30
OF L. L. WATERS

• • •

[16]

There is an especially large movement of Official-Southern Territory traffic from automobile plants in Official Territory to three automobile assembly plants located near Atlanta. Automobile parts moving to assembly plants require many specially equipped cars. Special racks for motors, fenders, and other parts which must be installed in box cars render such cars unsuitable for other loading. Other high-grade cars, many with D-F devices, must be provided to protect the movement of automobile parts to assembly plants. In order to assure an adequate supply of these cars for each assembly plant, the roads participating in the movement of automobile parts enter into separate arrangements requiring each road to assign cars to foreign line pools at origins in the North. In this way, the extra burdens of investment and repairs of special racks and other devices are apportioned between the roads handling the traffic. The Southern Railway has 969 specially equipped automobile parts cars assigned to such pools. All of the cars in these pools are in assigned service and are always returned empty to origin.

• • •

[22]

SOUTHERN RAILWAY INTERCHANGES WITH OFFICIAL TERRITORY CARRIERS

The principal interchanges of Official-Southern Territory traffic between the Southern Railway and Official Territory carriers occur at Potomac Yard, Virginia; Cincinnati, Ohio; and Louisville, Kentucky. A lesser amount of Official-Southern Territory traffic is interchanged at Norfolk, Virginia and East St. Louis, Illinois. In each instance,

the Southern Railway performs at least as much service as the Official Territory carriers in accomplishing the mutual interchange of Official-Southern Territory traffic at these points.

A. Potomac Yard, Virginia

The Southern Railway interchanges Official-Southern Territory traffic with the Richmond, Fredericksburg & Potomac Railroad, the Baltimore & Ohio Railroad, the Chesapeake & Ohio Railroad, and the Pennsylvania Railroad at Potomac Yard, Virginia. Potomac Yard is owned by the RF&P but is operated as a joint facility under an operating contract which provides that each user line shall share in the expenses of operation according to the number of cars it handles through the yard. This

[25]

results in each line being charged exactly the same amount per car handled as any other line. Certain charges, such as repair charges, are billed exactly against the account of the railroad for whose benefit the services were performed.

I am thoroughly familiar with the interchange services performed by all of the user railroads at Potomac Yard, having on two occasions served as a train-master on the Washington Division of the Southern Railway which extends into Potomac Yard, and, later, as Division Superintendent from 1954 to 1956, and can testify from my own first-hand experience that the interchange services performed by the Southern Railway and the four Official Territory carriers at Potomac Yard are absolutely equal.

The Southern Railway's northbound freight trains enter Potomac Yard at Braddock Road and move through a television installation into the northbound receiving yard. The Southern Railway's locomotives are detached from the train and moved by Southern Railway hostlers to our engine terminal in Alexandria or to our engine storage track located near the south end of Potomac Yard. The

conductor delivers the waybills to the Yardmaster's office while Potomac Yard car inspectors perform the inbound inspection. From the Yardmaster's office the waybills are sent to the office of the Joint Agent at Potomac Yard for checking and further processing.

The interchange occurs with the train standing in the northbound receiving yard without actual physical delivery from the Southern Railway to the Official Territory carriers. Actual time of interchange is determined by using the later of two times, namely, the completion of the Joint Agent's waybill check or the completion of the mechanical inspection of the inbound cars.

As soon as the inbound inspection has been completed, a Potomac Yard switch engine moves the train over the northbound hump and the cars

[24]

are classified into tracks in the northbound classification yard. Separate classifications are made of the cars for the B&O and the PRR. Cars for the RF&P and the C&O are classified into the same track in the northbound classification yard and then moved by a Potomac Yard engine to the southbound classification yard where they are reclassified, this time into separate tracks. Potomac Yard engines make up the outbound trains for each railroad, the road locomotives and cabooses of the receiving line are coupled and the train departs for destination.

RF&P and C&O trains also arrive in the northbound receiving yard and receive the same service performed on Southern Railway interchange traffic.

The southbound operation is quite similar to the northbound procedure described above, except in the reverse direction. The trains of the PRR and B&O pull into the southbound receiving yard. The conductor delivers the waybills to the Yardmaster's office and they are transmitted to the Joint Agent for checking while the inbound inspection is being performed by Potomac Yard car inspectors.

The interchange on southbound traffic also occurs without physical delivery to the receiving line while the train is standing in the southbound receiving yard. Time of interchange is likewise determined by the later of the two events —completion of the waybill check by the Joint Agent or completion of the inbound inspection. When the inbound inspection is completed, the train is classified over the southbound hump and the road locomotives of the receiving line couple to the interchange cut and depart for destination.

B. Cincinnati, Ohio

The Southern Railway interchanges Official-Southern Territory traffic with the Baltimore & Ohio Railroad, the Chesapeake & Ohio Railroad, the Norfolk & Western-Virginian Railway, the New York Central Railroad and the Pennsylvania Railroad at Cincinnati, Ohio. I served as Terminal

[25]

Trainmaster at Cincinnati for 2 years and a Division Superintendent with jurisdiction over the Cincinnati terminal for 6 years and possess a thorough knowledge of the services performed by each railroad in interchanging traffic between the Southern Railway and the Official Territory carriers at Cincinnati. In every case the Southern Railway performs at least as much service as the Official Territory carriers. The operational facts directly contradict any statement that the Official Territory carriers perform any more extensive or burdensome services in accomplishing the interchanges than must be performed by the Southern Railway.

1. Approximately 240 cars per day are interchanged between the Southern Railway and the Pennsylvania Railroad at Cincinnati. Southern Railway engines deliver the interchange traffic from our Gest Street Yard to the PRR at its Undercliff Yard, located approximately 8 miles away,

and pick up traffic from the PRR for handling to Gest Street Yard on the return trip. Similarly, PRR engines, operating over the same route, deliver interchange traffic to the Southern Railway at our Gest Street Yard and return to Undercliff Yard with interchange traffic for the PRR. Normally, each railroad makes one round trip each day and handles about 60 cars in each direction.

2. The interchange between the Southern Railway and the C&O is accomplished on two interchange tracks reached by a route approximately 2 miles long from Gest Street Yard and approximately 3 miles from the C&O's yard. The C&O delivers to the Southern Railway on one of the tracks and the Southern Railway delivers to the C&O on the other. Normally, each railroad makes 2 or 3 trips per day between its yard and the interchange point and approximately 60 cars per day are interchanged in each direction.

3. Cars for the CH&D Division of the B&O are delivered by the Southern Railway on two interchange tracks located approximately 1

[26]

mile from our Gest Street Yard and 500 feet from the B&O's CH&D Yard. B&O engines also deliver to the Southern Railway on the same interchange tracks. It requires approximately 1 hour and 15 minutes for both B&O and the Southern Railway engines to make a round trip between their yards and the interchange track. Approximately 75 cars per day are interchanged in each direction. After making delivery, the engines of each line return light to their respective yards.

The interchanges between the Southern Railway and the Ohio Division of the B&O are accomplished by the Southern Railway delivering to the B&O in its Brighton Yard and the B&O delivering to the Southern Railway at our Gest Street Yard. The two yards are located about 1 mile apart and the engines of each carrier move over the same route in making the interchange. Approximately 1

hour and 30 minutes are required by each carrier in accomplishing the interchange. An average of 75 cars per day are interchanged in each direction between Brighton Yard and Gest Street Yard.

4. The Southern Railway and the New York Central Railroad interchange approximately 150 cars per day in each direction. Southern Railway engines deliver interchange traffic to the New York Central Railroad from Gest Street Yard through the joint Oklahoma Junction track, where the congestion often causes long delays, to the NYC's Riverside Yard. The NYC delivers interchange traffic to the Southern Railway from Riverside Yard over the same route to our Gest Street Yard.

During 1959, the Southern Railway re-iced 3,901 cars at Cincinnati, 2,409 of which were northbound and 1,492 of which were southbound. Cincinnati is a regular icing station at which all northbound cars moving under standard refrigeration must be re-iced, unless the shipping instructions specify otherwise, before delivery to connections. The Southern Railway also re-ices southbound cars moving under refrigeration for the

[27]

C&O and the NYC which do not have icing facilities at Cincinnati.

C. Louisville, Kentucky

The interchange of Official-Southern Territory traffic between the Southern Railway and the five Official Territory carriers (Baltimore & Ohio Railroad, Chesapeake & Ohio Railroad, Monon Railroad, New York Central Railroad, and Pennsylvania Railroad) at Louisville, Kentucky, is accomplished through the Kentucky & Indiana Terminal Company, which is jointly owned by the Southern Railway, Baltimore & Ohio Railroad, and Monon Railroad. The Kentucky and Indiana Terminal Company charges each railroad exactly the same amount for its intermediate switching service.

The Kentucky & Indiana Terminal Company operates Youngstown Yard at Louisville, which consists of approximately 73 tracks, an engine terminal repair tracks, and icing facilities. The Southern Railway's westbound freight trains enter the K&I tracks at LS Junction, approximately 4 miles from Youngstown Yard, and move into the receiving tracks at the east side of Youngstown Yard. The road engine is cut off and moved to the engine terminal. The conductor places the waybills in a box at the entrance to the yard and a messenger takes them to the Joint Agent's office for processing. While the waybills are being processed, the train is thoroughly inspected by K&I car inspectors and then classified by K&I yard engines for each connection.

1. The interchanges between Southern Railway and B&O and Southern Railway and the Monon are accomplished at Youngstown Yard. Each railroad operates its road trains into Youngstown Yard, where the K&I performs the classification and switching service necessary to accomplish the interchange.

[28]

2. The Southern Railway interchange traffic for the NYC is handled by the K&I to 11th Street, approximately 2.4 miles from Youngstown Yard, where it is delivered to the Illinois Central Railroad for movement to the joint IC-NYC yard approximately 1.4 miles away. In the reverse direction, the NYC brings interchange traffic for the Southern Railway to 11th Street and delivers it to the IC for movement to a track near Panama Yard and 16th Street, where it is picked up by the K&I and moved into Youngstown Yard, approximately 2 miles away. The interchange between the Southern Railway and the NYC averages about 5 cars per day in each direction. K&I engines handling interchange cuts between Youngstown Yard and the NYC interchange also handle other cars for intermediate destinations and/or connections.

3. The K&I delivers interchange traffic from the Southern Railway to the PRR at a PRR track located near Panama Yard, which is approximately 2½ miles from Youngstown Yard. The PRR delivers its interchange traffic to the K&I at Panama Yard for movement to Youngstown Yard. Approximately 15 cars per day are interchanged in each direction between the Southern Railway and the PRR.

4. The interchange between the Southern Railway and the C&O is accomplished by the K&I moving the traffic to City Yard, approximately 3 miles from Youngstown Yard, where the IC picks it up and delivers it to the C&O. In the reverse direction, the IC moves C&O interchange traffic for the Southern Railway to City Yard and delivers it to the K&I, which moves it into Youngstown Yard.

VERIFIED STATEMENT NO. 31
OF JACK SMALL

[5]

Traffic Characteristics

During 1959 the consist of traffic handled by the Louisville and Nashville Railroad by major commodity groups was:

Commodity Group	Tons
Products of Agriculture	2,589,358
Animals and Animal Products	265,411
Products of Mines	47,507,381
Products of Forests	3,955,652
Manufactures and Miscellaneous	18,765,055
Forwarder Traffic	119,910
Less Carload Traffic	175,328
Total Freight Traffic	73,378,095

The principal commodities handled by the Louisville and Nashville Railroad during 1959 were:

Commodity	Class	Tons
Bituminous coal	305	30,999,327
Crushed stone	329	4,519,448
Gravel and sand	327	2,661,122
Iron ore	309	2,622,218
Clay and bentonite	323	2,214,838
Pulpwood	409	2,030,168
Fertilizers	539	1,806,416
Coke	307	1,404,651
Cement	633	1,239,322
Phosphate rock	343	993,987
Sulphuric acid	529	977,447
Feed, animal and poultry	773	869,097
Manufactured iron and steel	583	834,366
Lumber	411	776,490
Petroleum products	507	745,546
Food products, cans and packages	763	672,696
Chemicals	527	643,497
Paperboard	669	635,561
Wallboard	671	364,964
Iron and steel pipe and fittings	587	298,542

Bituminous coal contributed 30,999,327 tons or 42.2 percent of total tonnage during 1959. Volume commodities (sand and gravel, crushed stone, pulpwood, wet phosphate rock and iron ore) which move pre-

[6]

dominantly within the South in large cuts of cars from one origin to a single destination contributed 12,826,943 tons or 17.5 percent of total tonnage during 1959.

The principal commodities, excluding coal and coke, moving between Official and Southern Territories over the lines of the Louisville and Nashville Railroad are iron and steel products, machinery, appliances, automobile parts, tires and rubber, glass jars and bottles, chemicals, petroleum products, lumber and forest products, paper and paper products, wallboard, soap, canned goods, mineral wool, animals, dairy products, meat and meat products, fruits and vegetables, beer and malt, fertilizer, and cement.

During the 1958-1959 perishable shipping season, the L&N handled a total of 16,250 cars of perishables. Practically all of this traffic moves in refrigerator cars to Official Territory destinations. These refrigerator cars must be checked and/or re-iced at regular icing stations by representatives of the Fruit Growers Express Company (our contractors) to prevent damage to the highly perishable contents. Furthermore, during the 1958-1959 season the L&N executed 2,525 diversion and reconsignment orders on perishables at our own expense without additional charge. In addition to the paper work involved, the execution of diversion orders often requires a large amount of additional switching.

In 1959, 32.31 percent of the traffic handled by the Louisville and Nashville Railroad consisted of local traffic which was both originated and terminated on the L&N. 46.51 percent consisted of traffic originated on the L&N and delivered to connections. 12.72 percent consisted of traffic received from connections and terminated on the L&N,

while 8.46 percent was overhead traffic which neither originated nor terminated at points on the L&N.

* * *

[12]

Interchange With Official Territory Carriers

The Rail Form A system average costs for the year 1956, relied upon by the Official Territory carriers in this proceeding, attribute to the Official Territory carriers an average cost per interchange handling which is approximately 58 percent higher ($4.95 versus $3.14) than the average cost per interchange handling attributed to the Southern Railroads. The purpose of this section of my testimony is to show that, contrary to the implications of the 1956 Rail Form A system averages, the Official Territory carriers perform no more onerous or extensive service than the L&N in interchanging Official-Southern Territory traffic and that there is no factual justification for the Official Territory carriers' claim that their cost per interchange handling is

[13]

any higher than that of the L&N for interchanging Official-Southern Territory traffic at the same gateway interchange points.

Cincinnati, Ohio

The heaviest interchange of traffic between the L&N and Official Territory carriers occurs at Cincinnati, Ohio. The L&N interchanges traffic directly with the New York Central, Pennsylvania Railroad, Baltimore and Ohio Railroad, and Chesapeake and Ohio Railroad. The interchange with the Erie Railroad is accomplished through the Baltimore and Ohio Railroad and with the Norfolk and Western Railway (which now includes the former Virginian Railway) through the Pennsylvania Railroad.

For per diem and other purposes the interchanges are considered to occur at the points where the tracks of the L&N and the Official Territory carriers connect. With the single exception of the L&N-C&O interchange at KC Junction in Covington, Kentucky, all of these points are located on the north side of the Ohio River, with the result that the L&N must bear the entire expense of owning or maintaining the bridges over which the interchange traffic moves in both directions.

The actual interchanges occur in the yards of the receiving carriers except for the interchange with the C&O, which occurs at interchange tracks near KC Junction. The distances from our DeCoursey Yard on the south side of the Ohio River to the yards of the Official Territory carriers on the north side of the Ohio River are extremely long: 22 miles to the NYC's (Cincinnati Division) Sharonville Yard; 11.1 miles to the NYC's (Chicago Division) Riverside Yard; 13 miles to the PRR's Undercliff Yard; 9.9 miles to the B&O's (Toledo Division) Mill Creek Yard; and 9.9 miles to the B&O's (Ohio Division) Brighton Yard.

[14]

L&N transfer engines deliver interchange traffic to the C&O on interchange tracks near KC Junction in Covington, Kentucky and return with interchange traffic which the C&O delivers to the L&N at KC Junction. The interchange tracks at KC Junction are located 3 miles from our DeCoursey Yard and 4/10 miles from the C&O's Stevens Yard.

An arrangement has been in effect for many years at Cincinnati between the L&N and the NYC, PRR and B&O whereby the transfer crews of each line deliver interchange traffic to the other line and pick up cars destined to it for handling on the return trip. In other words, L&N transfer crews deliver interchange traffic to the NYC, PRR and B&O at their yards and pick up interchange traffic from these carriers and return with it to our DeCoursey Yard. Similarly the transfer crews of the NYC, PRR and B&O deliver

interchange traffic to the L&N at our DeCoursey Yard and return with interchange traffic from the L&N to their own yards.

The L&N and the Official Territory carriers (except the C&O) equalize the amount of service performed by each railroad through the equalization of engine hours operated on each other's rails, figured from the time the engine passes the per diem interchange points which are located near the junction of the tracks of the involved carriers on the north side of the Ohio River. Whenever it appears that one railroad is performing more switching than another, the railroad performing the lesser amount of service puts an additional engine into operation and the railroad performing the larger amount of service reduces its service until the engine hours are again equalized between the railroads. While the arrangement between the L&N and NYC provides for a monthly monetary settlement between the two railroads, this is not customarily followed as the equalization is accomplished through the addition or reduction of transfer engines as in the case of the PRR and B&O.

It is apparent that this equalization arrangement results in each

[15]

railroad performing practically the same amount of service in interchanging traffic at Cincinnati. There is no justification for the application of system average costs which attribute a 58 percent higher cost per car interchanged by the Official Territory carriers. The Official Territory carriers have even gone so far as to admit at pages 39 and 40 of their general petition for reconsideration in Docket No. 32055 that:

> "It was there pointed out (in the Official Territory lines' Exceptions to the Examiner's Proposed Report) that whatever the burdens of interchange between defendants and the L&N at Cincinnati, they are shared equally between the carriers involved."

The New York Central Railroad's supplemental petition for reconsideration in Docket No. 32055 also emphasizes that the costs of the interchange services at Cincinnati are equal (at page 11):

> "Although the Commission points out the cost implications of the L&N's obligation to deliver traffic at the interchange point to the New York Central (Sheet 14), it fails to point out that the New York Central has the reciprocal obligation and cost attendant thereto. Thus, the costs of performing interchange service are equalized and, if the L&N requires a great number of terminal engines due to delays in the interchange runs, it causes the same situation for the New York Central, as the conditions encountered are common to the crews of both the L&N and the New York Central. (Tr. 88-89, 683-687; Exhibit 101, p. 55)".

The position of the L&N in Docket 32055, with which the Official Territory carriers there agreed, is the same as my point here, that the services performed at the interchange points by the L&N and the Official Territory carriers are equal for all practical purposes.

Louisville, Kentucky

The L&N interchanges traffic with five Official Territory carriers at Louisville, Kentucky: the New York Central Railroad, Chesapeake and Ohio Railroad, Pennsylvania Railroad, Baltimore and Ohio Railroad, and Monon Railroad. The following description of the relative serv-

[16]

ices performed by each carrier clearly shows that the L&N and Official Territory carriers perform equal services in accomplishing the mutual interchange of traffic at Louisville. Again, there is no factual justification for the use of system averages which attribute 58 percent higher costs per car

interchanged to the Official Territory carriers since they perform no more onerous or extensive services than the L&N.

L&N transfer crews deliver interchange traffic from our five Louisville yards varying distances of from ½ to 8 miles to the common receiving point of the C&O and NYC. Thereafter the hauls of the C&O and NYC to their yard are about ½ mile. Traffic delivered to the L&N by the C&O and NYC is handled somewhat differently, the hauls of the C&O and NYC being from 1/10 to 1½ miles and the hauls of the L&N from ½ to 8 miles. The point where the interchange is actually accomplished is used for per diem purposes.

The L&N and PRR alternate at 6 months intervals in performing the interchange of traffic between the L&N's South Louisville Yard and the PRR's Jeffersonville Yard, which are located 7 miles apart. In other words, L&N crews both deliver interchange traffic to the PRR and pick up interchange traffic from the PRR for 6 months and then PRR crews deliver to and pick up from the L&N for the next 6 months. In this way the interchange services between the two roads are equalized. For per diem purposes, the interchange between the L&N and PRR crews occurs at 11th Street in both directions regardless of which road is handling the traffic.

The L&N delivers interchange traffic for the B&O and Monon at Louisville to the Kentucky and Indiana Terminal Company's Youngstown Yard, which is located 2 miles from our South Louisville Yard. The B&O and Monon are joint owners, along with the Southern Railway, of the Kentucky and Indiana Terminal Company. The Kentucky

[17]

and Indiana Terminal Company delivers interchange traffic from the B&O and Monon to the L&N on interchange tracks between Gaulbert Avenue and the Southern Railway crossing, which are located 1 mile from Youngstown Yard and 1 mile from our South Louisville Yard. For per diem pur-

poses, the interchange between the L&N and both the B&O and Monon is considered to occur at 7th and Magnolia Streets in both directions.

Evansville, Indiana

The third important interchange between the L&N and Official Territory carriers is Evansville, Indiana, where traffic is interchanged with the New York Central Railroad, Illinois Central Railroad, and the Chicago and Eastern Illinois Railroad.

The NYC uses the L&N's yard at Howell, Indiana, on the north side of the Ohio River and the interchange of traffic is effected by delivery in that yard by the road trains of each road. The yard switching is performed by L&N engines and crews, for which the NYC compensates the L&N on a unit cost basis.

L&N crews and engines deliver interchange traffic from our Howell Yard to the IC at its Evansville Yard, located 3 miles away, and return light. In the opposite direction, IC crews and engines deliver interchange traffic to the L&N at our Howell Yard and return light to the IC's Evansville Yard.

L&N and C&EI crews alternate monthly in handling the interchange of traffic in both directions between the L&N's Howell Yard and the C&EI's Wansford Yard, which are located 4 miles apart.

From the foregoing description it is obvious that the services performed by the Official Territory lines and the L&N in accomplishing the interchange of traffic at Evansville are exactly comparable.

My final Exhibit E shows foot-pounds per gross ton mile of road

[18]

on lines forming some of the principal southern routes compared to lines in the North.

VERIFIED STATEMENT NO. 33
OF E. H. BUELOW

[20]

. . . For example, the Illinois Central Railroad handles a substantial movement of bananas from New Orleans to destinations in Official Territory. Bananas are transported in refrigerator cars owned or leased by the Illinois Central and assigned to the movement of bananas. These assigned cars have an empty ratio of 100%.

The Illinois Central Railroad handles more than 80,000 cars each month at New Orleans. To handle this traffic, 32 switch engines are operated Monday through Friday of each week and 17 switch engines operate on Saturday and Sunday. The Illinois Central regularly operates four trains daily in each direction to and from New Orleans on the main line through McComb and Jackson, Mississippi, and two trains daily in each direction on the Valley Route between New Orleans and Baton Rouge, with extra trains operating on each line as needed.

* * *

[25]

Interchange with Official Carriers

The following discussion of the interchange services performed by the Illinois Central and Official carriers at the principal gateway interchange points shows that the services performed by the Official carriers in accomplishing the interchange of traffic with the Illinois Central are no more onerous nor extensive than those performed by the Illinois Central. Taking all of these interchanges together, the only conclusion justified by operating conditions is that the Illinois Central performs at least as much service and in some cases more than that performed by the Official carriers in the mutual interchange of Official-Southern traffic.

[26]

East St. Louis, Illinois

East St. Louis, Illinois, which is served by 22 railroads, is one of the most complex terminals in the United States. The Illinois Central Railroad interchanges traffic with seven Official lines at East St. Louis: the New York Central Railroad, Pennsylvania Railroad, Baltimore & Ohio Railroad, Wabash Railroad, Nickel Plate Railroad, Chicago & Eastern Illinois Railroad, and Illinois Terminal Railroad. Except for the Illinois Terminal Railroad the Illinois Central has no direct connection with any of these Official lines at East St. Louis and in each instance the interchange of traffic is accomplished through the Terminal Railroad Association of St. Louis or the Alton & Southern Railroad. Both of these intermediate switching lines assess the same switching charge per car regardless of the direction of interchange or the distance which they handle the car in accomplishing the interchange. The following description shows that the Illinois Central must perform as much service in accomplishing the interchange of Official-Southern Territory traffic as the Official lines perform at East St. Louis.

[27]

1. Interchange between Illinois Central and Pennsylvania Railroad.

(a) The Illinois Central delivers interchanged traffic destined for the PRR from our "B" Yard at East St. Louis to the Terminal Railroad at either Eads Bridge Yard or Wiggins Yard (3½ and 4½ miles, respectively) and the Terminal Railroad delivers it to the PRR at Rose Lake Yard. The PRR delivers interchange traffic destined for the Illinois Central from its Rose Lake Yard to the Terminal Railroad at either Eads Bridge Yard, Wiggins Yard, or Merchants Yard (2¾, 4 and 3½ miles, respectively) and the Terminal Railroad delivers it to the Illinois Central at our "B" Yard.

(b) The Illinois Central delivers interchange traffic destined for the PRR to the Alton & Southern Railroads at Davis Yard (a distance of 2 miles) and the Alton & Southern Railroad delivers to the PRR on interchange tracks at H N cabin (Hanover). The PRR delivers interchange traffic destined for the Illinois Central from its Rose Lake Yard to the Alton & Southern Railroad at H N cabin (Hanover) (a distance of 1 mile) and the Alton & Southern Railroad delivers to the Illinois Central at our "B" Yard.

2. Interchange between Illinois Central and Baltimore & Ohio Railroad.

(a) The Illinois Central delivers interchange traffic destined for the B&O from our "B" Yard to the Terminal Railroad at Eads Bridge Yard or Wiggins Yard (3½ and 4½ miles, respectively) and the Terminal Railroad delivers it to the B&O at Cone Yard. The B&O delivers interchange traffic destined for the Illinois Central from its Cone Yard to the Terminal Railroad at Eads Bridge Yard, Wiggins Yard, or Merchants Yard (½, 1¾ and 2¾ miles, respectively) and the Terminal Railroad delivers to the Illinois Central at our "B" Yard.

(b) The Illinois Central delivers interchange traffic destined for the B&O from our "B" Yard to the Alton & Southern Railroad at Davis Yard (a distance of 2 miles) and the Alton & Southern Railroad delivers to the B&O at H N cabin (Hanover). The B&O delivers interchange traffic destined for the Illinois Central from its Cone Yard to the Alton & Southern Railroad at H N cabin (Hanover) (a distance of 4 miles) and the Alton & Southern Railroad delivers to the Illinois Central at our "B" Yard.

[29]

3. Interchange between Illinois Central and New York Central Railroad.

(a) The Illinois Central delivers interchange traffic destined for the NYC from our "B" Yard to the Terminal

Railroad at Eads Bridge Yard and Wiggins Yard (3½ and 4½ miles, respectively) and the Terminal Railroad delivers it to the NYC at its Lower Yard. The NYC delivers interchange traffic destined for the Illinois Central to the Terminal Railroad at the NYC's Lower Yard and at the Terminal Railroad's Eads Bridge Yard (a distance of ½ mile) and the Terminal Railroad delivers to the Illinois Central at our "B" Yard.

(b) The Illinois Central delivers interchange traffic destined for the NYC from our "B" Yard to the Alton & Southern Railroad at Davis Yard (a distance of 2 miles) and the Alton & Southern Railroad delivers to the NYC at Davis Yard. The NYC elects to receive as well as deliver cars from and to the Alton & Southern Railroad at Davis Yard because the NYC is also permitted to deliver cars to the Alton & Southern Railroad at Mitchell (Wooster), Illinois which is 17½ miles from Davis Yard without the payment of an additional switching charge. The Alton & Southern Railroad assesses the same

[30]

intermediate switching charge on NYC cars received at Mitchell (Wooster) as it assesses on cars between the Alton & Southern Railroad and other railroads at East St. Louis.

4. Interchange between Illinois Central and Nickel Plate Railroads.

(a) The Illinois Central delivers interchange traffic destined for the NKP from our "B" Yard to the Terminal Railroad at Eads Bridge Yard (a distance of 3½ miles), where it is delivered to the NKP in track No. 6. The NKP delivers interchange traffic for the Illinois Central from their Freight House Yard to the Terminal Railroad in track No. 6 in Eads Bridge Yard and the Terminal Railroad delivers to the Illinois Central at our "B" Yard.

(b) The Illinois Central delivers interchange traffic destined for the NKP from our "B" Yard to the Alton & Southern Railroad at Davis Yard (a distance of 2 miles) and the Alton & Southern Railroad delivers to the NKP at Madison, Illinois. The NKP delivers interchange traffic destined for the Illinois Central from its yard in Madison, Illinois to the Alton & Southern Railroad on an interchange track located 1 mile away and the Alton & Southern Railroad delivers to the Illinois Central at our "B" Yard in East St. Louis.

[31]

5. Interchange between Illinois Central and Chicago & Eastern Illinois Railroads.

(a) The Illinois Central delivers interchange traffic destined for the C&EI from our "B" Yard to the Terminal Railroad at Eads Bridge Yard or Wiggins Yard (3½ and 4½ miles, respectively) and the Terminal Railroad delivers to the C&EI at its yard near Madison, Illinois. The C&EI delivers interchange traffic destined for the Illinois Central from its yard near Madison, Illinois to the Terminal Railroad at Merchants Yard (a distance of 3¾ miles) and the Terminal Railroad delivers to the Illinois Central at our "B" Yard in East St. Louis.

(b) The Illinois Central delivers interchange traffic destined for the C&EI to the Alton & Southern Railroad at Davis Yard (a distance of 2 miles) and the Alton & Southern Railroad delivers to the C&EI at Mitchell, Illinois. The C&EI delivers interchange traffic destined for the Illinois Central from its yard near Madison, Illinois to the Alton & Southern Railroad on an interchange track in Madison (a distance of 3¾ miles).

6. Interchange between Illinois Central and Wabash Railroad.

(a) The Illinois Central delivers interchange traffic destined for the Wabash from its "B" Yard to the Terminal Railroad at Eads Bridge

[32]

Yard and Wiggins Yard (3½ and 4½ miles, respectively) and the Terminal Railroad delivers to the Wabash at Levee Yard. The Wabash delivers interchange traffic from its Brooklyn Yard to the Terminal Railroad at Eads Bridge Yard and Wiggins Yard (1½ and ½ miles, respectively) and the Terminal Railroad delivers to the Illinois Central at our "B" Yard.

(b) The Illinois Central delivers interchange traffic destined for the Wabash from its "B" Yard to the Alton & Southern Railroad at Davis Yard (a distance of 2 miles) and the Alton & Southern Railroad delivers it to the Wabash at Mitchell, Illinois. The Wabash delivers interchange traffic destined to the Illinois Central to the Alton & Southern Railroad from its yard near Madison to the Alton & Southern Railroad on an interchange track at Madison (a distance of 3¾ miles) and the Alton & Southern Railroad delivers to the Illinois Central at our "B" Yard.

7. Interchange between Illinois Central and Illinois Terminal.

The Illinois Central delivers interchange traffic destined for the Illinois Terminal from our "B" Yard to the Illinois Terminal at an interchange track in Madison, Illinois (a distance of 6½ miles). The Illinois

[33]

Terminal delivers interchange traffic destined for the Illinois Central from its Madison, Illinois Yard to an interchange track in Madison, Illinois (a distance of 2½ miles).

Cairo, Illinois

The Illinois Central interchanges traffic directly with the New York Central Railroad at Cairo, Illinois. The Illinois Central delivers interchange traffic from our North Cairo Yard to the NYC on an interchange track at the Big

Four wye. The NYC delivers interchange traffic from the NYC Yard at Cairo to the same interchange track. Although each railroad handles the interchange cars for approximately the same distance (the interchange track is located about 1½ miles from each yard), the Illinois Central's operation is more difficult because it must back its cars about half the total distance in accomplishing the interchange.

Evansville, Indiana

At Evansville, Indiana, the Illinois Central interchanges Official-Southern Territory traffic with the Chicago & Eastern Illinois Railroad and the New York Central Railroad.

1. Interchange between Illinois Central and C&EI.

Both railroads perform identical service and operate the same dis-

[34]

tance over the same tracks in accomplishing the interchange. The Illinois Central delivers interchange traffic from Harwood Yard to the C&EI at Wansford Yard and the C&EI delivers to the Illinois Central from Wansford Yard to Harwood Yard, with the transfer engines of each line handling interchange traffic over the same tracks for the distance of 5½ miles between the two yards.

2. Interchange between the Illinois Central and NYC.

The New York Central has no yards in Evansville and its trains arrive and depart at C&EI's Wansford Yard or at L&N's Howell Yard. Interchange traffic between Illinois Central and New York Central via the C&EI is handled in the same manner as described above for traffic interchanged between the Illinois Central and the C&EI. Interchange traffic via the L&N is handled by Illinois Central from Harwood Yard to the NYC at L&N's Howell Yard (a distance

of 4½ miles) and in the reverse direction NYC cars for the Illinois Central are delivered from L&N's Howell Yard to Illinois Central at Harwood Yard (a distance of 4½ miles).

[35]

Louisville, Kentucky

The Illinois Central interchanges Official-Southern Territory traffic at Louisville, Kentucky with five Official Territory carriers: The Chesapeake & Ohio Railway, Big Four (New York Central Railroad), Pennsylvania Railroad, Monon Railroad, and Baltimore & Ohio Railroad.

1. Illinois Central interchange with Chesapeake & Ohio Railway and New York Central Railroad.

Illinois Central traffic for interchange to both the C&O and the NYC is delivered from our Oak Street Yard to the C&O and NYC in NYC Yard (a distance of 3 miles) C&O and NYC cars for interchange to the Illinois Central are delivered by the NYC, which also performs transfer work for the C&O, from the NYC Yard to the Illinois Central at our Floyd Street Yard (a distance of 1¼ miles) and the Illinois Central must then transfer the interchange traffic to our Oak Street Yard.

2. Illinois Central interchange with the Monon Railroad and Baltimore & Ohio Railroad.

The Illinois Central has no direct connection with the Monon or B&O at Louisville and interchange traffic between the Illinois Central and

[36]

these two Official lines is handled through the Kentucky & Indiana Terminal Company, an intermediate switching line which receives a uniform switching charge per car for its service. The Illinois Central pays the switching charge on northbound traffic and the Monon and B&O pay the switching charge on the southbound interchange traffic.

The Illinois Central delivers interchange traffic destined for the Monon or B&O from our Oak Street Yard to the Kentucky and Indiana Terminal Company at L.S. Junction (a distance of ¾ of a mile) and the Kentucky & Indiana Terminal Company delivers to the Monon and B&O in the K&IT's Youngstown Yard. Monon and B&O trains originate and terminate in the K&IT's Youngstown Yard and interchange traffic from these two railroads is delivered to the Kentucky & Indiana Terminal Company right in Youngstown Yard and the Kentucky & Indiana Terminal Company then delivers to the Illinois Central at L.S. Junction.

3. Illinois Central interchange with the Pennsylvania Railroad.

The Illinois Central delivers interchange traffic from our Oak Street Yard to the PRR in its Portland Avenue Yard and the PRR delivers from its Portland Avenue Yard to the Illinois Central at our Oak Street Yard, with the engines of each railroad delivering interchange traffic the

[37]

same distance over the same route between the two yards and returning light.

The only Official line which performs as much service in accomplishing the interchange at Louisville as the Illinois Central performs is the PRR. In every other instance, the Illinois Central performs a greater amount of service in accomplishing the interchanges from the other Official carriers (i.e., the C&O, NYC, Monon and B&O).

VERIFIED STATEMENT NO. 35
OF J. L. LONON

[9]

INTERCHANGES

Clinchfield interchanges with eight Southern and two Official lines. The Official lines, naturally, connect at or near the northern extremities of the Clinchfield; and the Southern-line connections lie to the south. While Clinchfield is located principally in the Southern Region, its position as a link between railroads in Southern Territory and those in Official Territory places Clinchfield in the peculiar position of having problems of a like nature to the railroads in Official Territory, as well as those of the South. In coping with these problems, Clinchfield is in a position to experience to a great extent the expense of operations in both territories and finds them to be practically equal.

Elkhorn Yard

At Elkhorn Yard, Kentucky, the Clinchfield's connection with the Chesapeake & Ohio Railway, the operation is on a joint basis with each road using the same facility. The volume of traffic handled through this

[10]

interchange for the first nine months of 1959 averaged 15,465 cars per month or approximately 7,700 cars for account of each road. To simplify description of the interchange facility, a map, identified as Exhibit No. C is submitted, which shows the general yard track layout and the location of structures incidental to the interchange between roads. Clinchfield Railroad owns and maintains all right of way, tracks, buildings, and other equipment necessary for the operation, shown between point A and point B on the map. For right to equal use of these facilities, Chesapeake & Ohio Railway pays Clinchfield Railroad 50 percent

of all maintenance plus a nominal annual interest (3 per cent) on an agreed valuation (of $359,078.14). In addition, Clinchfield is required to provide all employes to perform all work for both lines, furnish all office equipment, lights, water, fuel, telephone, etc., incidental thereto, and receives as compensation from the Chesapeake & Ohio Railway 50 per cent of all these expenses accrued, payable on a monthly basis.

No operating yard personnel are employed at Elkhorn Yard in operating the exchange yard as each line operates its own road trains into the yard under the direction of a joint yardmaster and effects delivery to the other line at the time the road train stops in the yard and/or the covering waybills are delivered to the yard office.

Switching necessary to the classification and movement of outbound trains is performed by the road crews and with the locomotive of the receiving carrier. For Chesapeake & Ohio outbound manifest trains (received from Clinchfield), classification is practically unnecessary as Clinchfield blocks all Chesapeake & Ohio manifest traffic at its Erwin,

[11]

Tennessee classification yard in station order for the Chesapeake & Ohio to the extent that the train can move over the entire first division (Big Sandy) of the Chesapeake & Ohio Railway and into its first general classification yard (Russell, Kentucky) without switching. These switching movements by Chesapeake & Ohio Railway crews at Elkhorn Yard, Kentucky on its outbound manifest trains are limited to doubling the train together from one track to another, setting out a bad order car, or an occasional move to place a car which was picked up by the Clinchfield at some point intermediate to Erwin and Elkhorn Yard in its proper classification block.

Classification of Clinchfield outbound manifest trains (received from C. & O.) requires considerably more switching than the Chesapeake & Ohio outbound manifest trains

due to the fact that the Chesapeake & Ohio only sets up two classification blocks at its Russell, Kentucky Yard on trains for delivery to the Clinchfield at Elkhorn City, Kentucky. One block contains all cars, mixed and unclassified, terminating in the States of Kentucky, Virginia and Tennessee, and the other contains all cars terminating at Erwin, Tennessee, or points in the South beyond. As all of the traffic moving in the Virginia-Tennessee block terminates on the Clinchfield locally, or is for delivery to connecting lines short of Clinchfield's first general classification yard and terminal (Erwin, Tennessee), such cars must be classified into three blocks (e.g., Dante, Virginia; Kingsport, Tennessee; and Johnson City, Tennessee) at Elkhorn Yard, Kentucky. Other switching moves necessary to outbound movement of Clinchfield trains are limited, as in the case of the Chesapeake & Ohio,

[12]

to doubling the train together from one track to another, setting out bad order cars and the occasional proper placement of a car improperly classified by the delivering line.

Train inspection for each road is effected by one and the same group of joint employes under the direction of a joint mechanical foreman. This function is performed on a first-come, first-served basis with the exception of northbound Florida perishable trains delivered to the Chesapeake & Ohio which are given preference over other trains that may have arrived first.

Road crews of both the C. & O. and Clinchfield who perform switching and other work in Elkhorn Yard preparatory to the outbound movement of their trains receive initial terminal arbitraries which are compensatory on an approximately equal basis for the time consumed in this service and therefore the expense for each line is likewise equalized.

In summing up the matter of the expense accruing to each line at the Elkhorn Yard, Kentucky interchange, the

cost per car interchanged is obviously at least equal for each railroad. If anything, our costs are greater, with the Clinchfield carrying the burden of the obligation to provide employes, facilities and service satisfactory to the Chesapeake & Ohio Railway for which Clinchfield receives no compensation in return.

St. Paul, Virginia

The second interchange point between Clinchfield Railroad and an Official line is with the Norfolk & Western Railway at St. Paul, Virginia, at which point the volume of traffic interchanged between the two roads amounted to an average of 6,066 cars per month during the first nine

[13]

months of 1959. Each road provides interchange tracks and other physical facilities on its own right of way and adjacent to its own main track necessary to the receipt of traffic from the other. The two yards are physically connected by a lead track approximately 1,000 feet in length. To be of assistance in clarifying the description of this facility, a map showing track layout is submitted as Exhibit No. D. These facilities are provided on somewhat of an equalization basis: that is, the carrier having the least amount of track provided for the sole purpose of interchange will pay to the other a nominal annual interest on the agreed difference in valuation of the two interchange yards for the right of use of that additional portion. Presently, the valuation of such properties provided by each line for the sole purpose of accepting traffic in interchange is agreed as equal and current expenses to either line for this item are nil.

The Norfolk & Western furnishes all employes, with the exception of mechanical inspection forces, who perform the work. It also provides necessary buildings and other items such as lights, water, etc., incidental to the work required of the employes, and bills Clinchfield for 50 per cent of all direct expenses plus a nominal interest on an

agreed valuation of structures and real estate for the right of use of such property. No operating yard personnel are employed in the interchange yards as each line effects delivery to the other's interchange facility with road crews. Switching or classification necessary to the outbound movement is performed by road crews. Required equipment inspection is accomplished

[14]

separately by each company, with the Norfolk & Western maintaining its own mechanical personnel at point of interchange to perform this service for its account and Clinchfield providing employes for its account from a nearby classification yard. In using the foregoing facts to determine whether the burden of terminal and interchange expenses is greater for one of these carriers than the other, one would reasonably and simply conclude that such costs are approximately equal.

Net Investment Method is the carriers' investment in road and equipment, material and supplies, and cash; less accrued depreciation and amortization at the end of the year under consideration, as reported to the Bureau of Railway Economics. The base at the middle of the year was determined by averaging the figures at the beginning and end of the year.

The 88 cars of unconsigned coal listed on the foregoing statements had to be switched out of the loaded car yards of the mines involved along with the ordered out coal. Upon arrival at South Fork Yard the unconsigned coal had to be switched out of the other cars, placed on hold tracks, and as disposal orders for individual cars were received such cars had to be gotten out of the accumulation in which located and classified for outbound movement. It can be appreciated that some cars were handled and rehandled many times.

As a further reflection of what is demanded of the railroads in the way of car supply to provide for the transportation of coal, I identify at this

Appendix D, Section H, p. 25:

time Exhibit No. 323 (AFM-6). Here is demonstrated statistically that, notwithstanding the greater proportionate ownership of coal (hopper) cars than any other class of car on the Pennsylvania Railroad, the number of shipments

originated per year per coal car owned by and available to the Pennsylvania Railroad is considerably less than the number of shipments originating per year per car of any other class of car.

Exhibit No. 323 (AFM-6) was prepared, insofar as car ownership is concerned, by averaging the figures for January and December, 1952, as reported in A.A.R. Form CS-15A statements, to which were added the cars owned by the Berwind White Coal Mining Company, since they are used in the shipment of coal originating on the Pennsylvania Railroad, and increased as well by 110 cars leased by the Pennsylvania Railroad for use in the movement of closed top freight.

The shipments originating on the Pennsylvania Railroad in 1952 were allocated to the various types of car equipment on the basis of the relationship as determined by the Interstate Commerce Commission, Bureau of Transport Economics and Statistics, from carload waybill analysis as set forth in their Statement No. 5354, issued at Washington in December, 1953. There was only one classification of traffic not reported in Statement 5354 that originated on the Pennsylvania Railroad, namely Class No. 683—Asbestos Articles NOS, of which the Pennsylvania Railroad originated 63 cars and which we have classified as forwarded in box cars. The relationships computed from Statement 5354 (any percentage less than one was disregarded) were applied to the carloads of the same commodities originated on the Pennsylvania Railroad to ascertain the number of cars by types of cars in which transported. The results appear under the headings shown in Exhibit No. 323 (AFM-6).

Appendix D, Section H, p. 26:

We have omitted any attempt to compute the number of shipments per car when moved in refrigerator or tank cars because the P.R.R. does not own any of these classes of cars, and since it would be impracticable to determine

what the car assignment would have been for the volume of traffic offered. We have not specifically treated of stock cars in this analysis because this is a specialized movement subject to humanitarian, legal and particular railroad regulations which make any comparison with bituminous coal inappropriate and valueless.

In an analysis of this exhibit it makes no difference whether Col. 2, Line 19 is used for open-top hopper cars for coal (and coke) in comparing with Cols. 4, 5 and 7, Line 21, for other equipment or whether Col. 2, Line 21, is selected for the use of open top hopper cars. Either comparison shows that the Pennsylvania Railroad while providing an adequate supply of coal cars does not realize therefrom a return of revenue shipments in the same proportion as is experienced with other car types.

From the exhibit the total of turn-around time, idle time at shipping points, in storage, held for or under load may be determined.

(1)	Shipments Per Car Per Year (2)	Number of Days Between Shipments (3)
Open Top Hopper Car Traffic:		
Bituminous Coal	6.5	56
All Commodities	10.4	35
Gondola Car Traffic	12.6	29
Box Car Traffic	13.4	27
Flat Car Traffic	15.4	24

Col. (2): From Line 15, Col. 2, Exh. 323 (AFM 6) for the "6.5" figures; all others from Col. 2, Line 21, same exhibit.
Col. (3): 365 divided by Col. (2).

Appendix D, Section H, p. 27:

Again the less use of open-top hopper cars particularly for bituminous coal is demonstrated by the above statement.

Coal traffic particularly, and bituminous coal especially, enjoys on the whole, a greater fluidity in the way of car sup-

ply than commodities generally. It has been demonstrated elsewhere in my testimony that coal producers have a great advantage in the way of loading cars and holding them in the origin fields free from demurrage, as well as favorable conditions from the demurrage standpoint at tidewater and lake ports. These provisions have had a direct influence on the determination of the number of cars built and maintained by the carriers for the coal trade. Coal cars constitute the greatest number of any particular class of car owned by the Pennsylvania Railroad. One of the adverse effects of such circumstances is set forth in an exhibit which I now identify as Exhibit No. 324 (AFM-7).

Exhibit No. 324 (AFM-7) is a statement showing separately for the years 1944 to 1953, inclusive, the surpluses and shortages of hopper cars on the Pennsylvania Railroad with certain relationships to the United States. Except as otherwise noted or as apparent from the columnar headings the data are the average daily figures, computed, however, in two ways. From Columns 8 to 22, inclusive, the daily average is obtained by dividing the total surpluses and shortages by the number of days on which such surpluses and shortages occurred. Columns 26 to 33, inclusive, show daily averages calculated on a 365 day basis. Shown also on the exhibit is the number of weeks that surpluses and shortages of hopper cars existed in each year, and the percentages these weeks are of the 52 weeks constituting a year's period. The maximum minimum and average surpluses and shortages are related to the Pennsylvania Railroad ownership of hopper cars. Compared therewith, at Columns

Appendix D, Section H, Page 28:

12-13 and 22-23, are the daily average number of P.R.R. cars other than hopper cars, surplus and short, and their percents of total ownership of other cars. Given as well are the number of hopper cars for all the railroads of the United States and the Pennsylvania Railroad proportion

of such ownership. Also shown are the number of cars of bituminous coal originated on the Pennsylvania Railroad and the number of cars of bituminous coal originated in the United States as a whole, as well as the ratio of the Pennsylvania Railroad to the country as a whole.

To ascertain what the situation was before the War and before the depression, I developed the following figures for the year 1929, which was very good from the standpoint of coal production: The Pennsylvania owned 96,452 hopper (coal cars), and the average surplus was 15,053 cars, or 15.61% of its ownership. There were no shortages of equipment during that year.

The following facts indicated by this exhibit are of importance in these proceedings:

1. Where surpluses of hopper cars are reported the percentages of such surpluses to the total hopper car ownership on the Pennsylvania Railroad is remarkably greater than similar ratios for other P.R.R. types of equipment. An example—In the year 1946 the average surplus ratio (Column 13) to P.R.R. hopper car ownership was 41.08% compared with 8.23% (Column 15) for other P.R.R. car equipment. The same is true for the other years when a surplus was shown.

2. When shortages of cars are reported the percentages of such shortages to the total ownership of the Pennsylvania Railroad is consistently very small (the highest in 1950 only .98%—Column 21). Compared with shortages of all other P.R.R. cars coal equipment shortages were greater in only three years of the ten-year period, but at no time as much as one percentage point greater.

Appendix D, Section H, Page 29:

3. When comparison is made between the Pennsylvania Railroad surpluses and shortages and those prevalent in the United States we have a somewhat similar relationship.

It is to be remembered that the surpluses and shortages in these instances (Columns 26-33) were spread over the entire year, not averaged simply for the days on which surpluses and shortages occurred.

4. Note that the Pennsylvania Railroad's ratio of hopper cars owned to the total of the United States ranges from 13.25% in 1953 to 15.75% in 1944 (Column 34), whereas the number of cars of bituminous coal originated on the Pennsylvania Railroad compared with the United States as a whole ranges from a low of 9.19% in 1953 to a high of 12.12% in 1946 (Column 37).

If columns 35, 36 and 37 of Exhibit No. 324 (AFM-7) were followed by others representing the sum of the cars of bituminous, anthracite and coke originated on the P.R.R. and the United States and by still other columns covering Products of Mines, we would have the following percentage relationships:

Year	Per Cent. P.R.R. of United States Number of Cars Originated		Per Cent. P.R.R. Ownership Hopper Cars of United States (Col. 34, Exh. 324 (AFM-7)
	Bit., Anth., Coke	Products of Mines	
1944	11.15	8.73	15.75
1945	11.13	8.75	15.63
1946	11.81	9.25	15.50
1947	11.77	8.81	15.34
1948	11.05	8.27	14.80
1949	10.50	7.70	14.25
1950	10.25	7.66	14.27
1951	10.17	7.45	14.32
1952	10.09	7.19	13.80
1953	10.18	7.14	13.25

• • •

Appendix D, (Pages 69-70), Section H, Page 30:

Regardless of how the comparison is made the P.R.R. ratio of hopper car ownership to that of the United States is greater than the coal and coke originated on its line or of Products of Mines, which, of course, includes in addition such commodities as ore, gravel, sand, etc.

Since the car data for the United States showing hopper cars separately are not readily available for 1929 and 1936, we have been unable to show the ratios for those two years.

Along with Exhibit No. 324 (AFM-7) consideration should be given to the showing hereinbefore made in the matter of "no-bill" or unconsigned cars loaded with bituminous coal, for which the railroad received no demurrage. In other words, in the one instance the railroad must have available and on hand without revenue return empty cars made idle through no fault of its own, and on the other hand provide storage for coal in its cars, likewise without revenue return.

Mr. R. C. Klein, witness for the Reading Company, has explained in his testimony the concessions made to the coal industry by the carriers, with Interstate Commerce Commission approval, in connection with the assessment of demurrage at tidewater and lake ports during the demurrage periods from February 1, 1953 to January 31, 1954.

Closely associated with the foregoing waiving of demurrage charges at tidewater and lake ports, with the lack of assessment of demurrage charges in the origin fields, with the greater number of coal cars required because of these conditions, is the assumption of per diem at tidewater and lake ports due to the time foreign cars are held under load with bituminous coal by the coal trade.

Appendix D, Section H, Page 31:

Based upon the months of February, March and April, 1953, the statement below shows such detention for the various Pennsylvania Railroad port cities handling bituminous coal:

Location	No. For Cars	Car Days Held	Avg. Days Delay per Car
South Amboy	2956	22,345	7.6
Philadelphia	1760	19,096	10.9
Baltimore	2600	11,574	4.5
Sodus Point	5119	20,790	4.1
Total	12435	73,805	5.9

At the present per diem rate of $2.40 per car per day, the 12,435 foreign cars detained an average of 5.9 days per car, would require the payment of $176,078 for car rental.

At the same ports, during the same months of 1953, Pennsylvania Railroad owned equipment loaded bituminous coal was detained as follows:

Location	No. Cars	Car Days Held	Av. Days Delay per Car
South Amboy	7270	60,083	8.3
Philadelphia	4366	51,428	11.8
Baltimore	3621	18,937	5.2
Sodus Point	8473	36,448	4.3
Total	23730	166,896	7.0

It is quite evident, therefore, that the handling of tide-water coal and coal transshipped at Lake Ontario Ports entails an unusually high detention of equipment.

VERIFIED STATEMENT NO. 38
OF ROBERT L. CORNELIUS

My name is Robert L. Cornelius. I am Assistant Comptroller, Atlantic Coast Line Railroad, Jacksonville, Florida. Prior to my appointment to this position, I was Assistant Director of Research, Association of Southeastern Railroads. I have had in excess of twelve years' experience in transportation and statistical work, of which the past ten years' experience has been primarily involved in and closely associated with statistical analysis and cost-finding in the railroad field. My duties with the Association of Southeastern Railroads required the preparation of exhibits and testimony for presentation before the Interstate Commerce Commission and the various public service and public utility commissions in states in the South. My present position involves similar duties on behalf of the Atlantic Coast Line Railroad Company.

This statement deals with the construction of a scale of divisional prorating factors and assumes, as the Commission found in its prior order in this Investigation, that uniform cost levels are applicable to the handling of the North-South traffic in each of the two territories.[1] Also, as was prescribed for present divisions, an equal factor scale, i.e., the same scale used by the North and the South, is assumed to be appropriate for purposes of this discussion. Other witnesses will deal with the determination and measurement of any differences in the cost of handling the Official-Southern traffic.

[2]

The construction of a scale of prorating factors to be used to divide the joint revenue from North-South traffic is extremely important, notwithstanding that the same scale

[1] Official territory and Southern territory will be referred to herein often as the North and the South, respectively.

applies to the miles performed in each territory. In a scale having a straightline progression such as that prescribed in Docket 29885, the magnitude of the factor, or integer, in the first mileage block determines to a large degree the distribution of the revenue whenever a disparity in length of haul exists between two participating groups of carriers. To illustrate, assume average hauls of 350 miles in the North and 500 miles in the South, the approximate average hauls on the North-South traffic subject to the Docket 29885 divisions scale. The present prescribed scale would divide each $100 of joint revenue as follows:

	I.C.C. Docket 29885 Scale			
	Haul	Integer Value	Percent	Revenue Division
North	350	137	44%	$ 44
South	500	174	56	56
Total	850	311	100%	$100

If, however, thirty-seven (37) integers are eliminated from the prescribed scale, with the progression of the scale remaining unchanged, each $100 of joint revenue would divide as follows:

	I.C.C. Docket 29885 Scale Minus 37 Integers			
	Haul	Integer Value	Percent	Revenue Division
North	350	100	42%	$ 42
South	500	137	58	58
Total	850	237	100%	$100

Thus, at these hauls, the present scale gives the North $44 out of each $100 to be divided, while a scale having 37 integers less in the first mile-

[3]

age block would give the North $42. In effect, at hauls of 350 North, 500 South, the presence or exclusion of 37 integers in the present scale of divisional integers controls the distribution of $2.00 out of every $100 of joint revenue, and

the presence of the 37 integers favors the territory having the shorter haul, in this instance the North.

The magnitude of the integer value in the first mileage block is even more important to individual hauls. As illustration, consider the plight of the Florida East Coast Railway. Because of its geographical location, it only participates in the North-South traffic when the haul in the South is greater than 589 miles, the shortline distance between Jacksonville, Fla., and Roanoke, Va., or more often greater than 622 miles, the shortline distance between Jacksonville, Fla., and Richmond, Va. When the F.E.C. participates in this traffic from or to Miami, Fla., the haul in the South is at least 953 miles, or 985 miles, depending on whether the gateway is Roanoke or Richmond.

On the other hand, hauls in the North on movements in which the Florida East Coast participates may often be relatively short. For example, the distance from Richmond, Va., to Washington, D.C., on the Richmond, Fredericksburg and Potomac Railroad is 110 miles; from Roanoke, Va., to Cincinnati, Ohio, on the Norfolk and Western, 424 miles; and from Richmond, Va., to New York City on the R.F.&P. and Pennsylvania R.R., 340 miles. As shown by the South's traffic study on movements in which the F.E.C. participates, the haul in the North averages 363 miles and in the South 1,011 miles.

[4]

At these hauls, under the present prescribed scale, every $100 of revenue is divided as follows:

	I.C.C. Docket 29885 Scale			
	Haul	Integer (Interpolated)	Percent	Revenue Division
North	363	140.12	32.08%	$ 32
South	1,011	296.64	67.92	68
Total	1,374	436.76	100.00%	$100

Again, however, the elimination of 37 integers from the percent scale would divide each $100 of revenue as follows:

	I.C.C. Docket 29885 Scale Minus 37 Integers			
	Haul	Integer (Interpolated)	Percent	Revenue Division
North	363	103.12	28.43%	$ 28
South	1,011	259.64	71.57	72
Total	1,374	362.76	100.00%	$100

It is evident that whenever such a disparity of haul exists, 37 integers in the first mileage block of the Docket 29885 scale determine the distribution of $4.00 out of every $100 of joint revenue, and its inclusion favors the group of carriers having the shorter haul.

[5]

That the presence of an integer value greater than justified on the basis of costs in the first mileage block of the Docket 29885 divisional scale does markedly affect the carriers that participate in the long hauls, such as the F.E.C., is more evident when its effect on the rate of return is measured. Assuming equal costs, the northern and southern railroads share in the cost of performing hauls of 363 miles North of the gateway and 1,011 miles South, as follows:

	Official-Southern Average F.D. Costs[1]				
	Miles	Operating Expenses Rents and Taxes	Return at 4%	Total Cost	Distribution
	(1)	(2)	(3)	(4)	(5)
North	363	$131.29	$ 28.76	$160.05	29.26%
South	1,011	314.96	71.98	386.94	70.74
Total ..	1,374	$446.25	$100.74	$546.99	100.00%

On the basis of relative costs, each $546.99 of joint revenue would divide $160.05 North and $386.94 South and produce a four percent rate of return for each of the carriers participating in the haul.

[1] Official-Southern average costs have been used to observe an equality of costs as between the North and the South.

The Docket 29885 scale would divide this $546.99 of joint revenue $175.47 North and $371.52 South, computed as follows:

	I.C.C. Docket 29885 Scale			
	Haul	Interger (Interpolated)	Percent	Revenue Division
North	363	140.12	32.08%	$175.47
South	1,011	296.64	67.92	371.52
Total	1,374	436.76	100.00%	$546.99

[6]

This in turn would give a 6.14 percent rate of return to the carriers in the North and 3.14 percent return to the South, in lieu of a 4 percent return to which each group of carriers is entitled by their proportionate costs. The following illustrates the effect:

	Docket 29885 Division of Revenue	Operating Expenses Rents & Taxes	Return [Col. (1) Minus Col. (2)]	Rate of Return
North	$175.47	$131.29	$ 44.18	6.14%
South	371.52	314.96	56.56	3.14%
Total	$546.99	$446.25	$100.74	

Railroads that participate principally in the long hauls fail to receive full cost proportions of the through revenue, which results in a depressing impact on rate of return. This has a most pronounced effect upon the Florida East Coast Railway, participating only in the longer hauls and benefits in favor of the relatively shorter haul carriers in the North.

It is, therefore, extremely important to have the scale of divisional integers correctly constructed in order to accomplish equality of divisions. It will be developed later in this statement that the present Docket 29885 scale of divisional integers does in fact contain an integer allowance in the first mileage block which exceeds an allowance constructed on costs by 37 integers: (1) six of which are attributable to integer values reflecting mileages at upper limit of each block; (2) 31 of which are due to the use of a rate

scale progression in the construction of the divisional integer scale. Each of these propositions will be dealt with separately.

[7]

I. Application of Scale to Mileage Blocks

In the construction of a scale of integers, consideration must be given to a linehaul element and a terminal element. As will be seen in Part II hereof, the Commission recognized the terminal service by the deduction of one terminal allowance from the Appendix 18, Docket 28300 rate scale. Recognition was given, of course, to the linehaul element in the progression of the scale itself (12.06 integers for each 50 miles of linehaul service.)

It is not sufficient, however, merely to recognize the existence of terminal and linehaul elements as components of a divisional integer scale, but each must be weighted into the scale in a manner which preserves or establishes a proper relationship between them. Whether the starting point in construction is with the terminal or with the linehaul element (progression of scale), the terminal component must contain the equivalent of a predetermined number of miles of linehaul service. How many miles are proper will be considered under the subject of, "Rate Scale Progression." How many miles of linehaul are allowable in the first mileage block is of primary consideration at this point.

Once the progression of the scale has been established—for instance the 12.06 per each 50 miles in the present prescribed scale—and the mileage block construction has been established—multiples of 50-miles each as in the present prescribed scale—the problem is how much allow-

[8]

ance for linehaul should be included in the 0-50 mile block of the scale. The prescribed scale now allows a full 50 miles of service within each mileage block irrespective of actual miles of service performed.

This method gives credit for miles of service not actually performed on every carload having an actual haul less than the upper limit of the mileage block. A carload of traffic actually receiving a full fifty miles of linehaul in one territory would receive credit for service performed. However, if a second car had but one mile of linehaul service, it would also be assigned an integer reflecting a full 50 miles of service. The two cars combined would have received, in effect, credit for a total of 100 miles of linehaul service or an average of 50 miles per car, compared to an actual total of 51 miles or an average of 25.5 miles per car. To reflect service actually performed, the first mileage block should reflect 25.5 miles of linehaul service in lieu of 50 miles.

While this illustration is limited to only two cars, it would be expected that any sizeable sample of cars would produce the same average, that is, the cars distributed throughout the mileage block with about as many having hauls above as below 25.5 miles—the arithmetic mean or midpoint of the 1-50 mile mileage block. By the same token, for subsequent mileage blocks the weighted average haul would be expected to be 75.5 for the second block, 125.5 for the third, etc.

[9]

As shown by Appendix A hereto, this assumption is borne out in actual practice. Based on the North's traffic study (underlying Witness Butler's Verified Statement No. 1), the weighted average haul within each mileage block north and south of the gateway, respectively, coincides, for all practical purposes, with the arithmetic mean or midpoint of each block. For ready inspection, a portion of that appendix is reproduced below:

[10]

Weighted Average Hauls by Mileage Block vs. Mileage Block Mid-Points—North-South Traffic

Mileage Block (1)	Average Haul (2)	Arithmetic Mean or Mid-Point (3)	Deviation (Diff. Bet. Mileage Block Mid-Point and Average Haul) (Col. 3 Minus Col. 2) (4)
	—NORTH OF GATEWAY—		
50	29.53	25.50	— 4.03
100	74.17	75.50	+ 1.33
150	124.95	125.50	+ .55
200	174.07	175.50	+ 1.43
250	228.07	225.50	— 2.57
300	273.60	275.50	+ 1.90
350	327.60	325.50	— 2.47
400	372.86	375.50	+ 2.64
etc.	etc.	etc	etc.
	Net difference—all mileage blocks		+14.41
	Average net difference (14.41+24 mileage blocks)		+ .60
	Total difference above or below mid-point		62.03
	Average difference (62.03+24 mileage blocks)		± 2.58
	—SOUTH OF GATEWAY—		
50	30.22	25.50	— 4.72
100	78.74	75.50	— 3.24
150	127.62	125.50	— 2.12
200	173.88	175.50	+ 1.62
250	222.86	225.50	+ 2.64
300	279.53	275.50	— 4.03
350	324.58	325.50	+ .92
400	375.12	375.50	+ .38
etc.	etc.	etc.	etc.
	Net difference—all mileage blocks		+ 1.26
	Average net difference		+ .05
	Total difference above or below mid-point		83.90
	Average difference		± 3.50

[11]

From this table and Appendix A, it will be noted that the actual weighted average hauls north of the gateway on the average fall within 2.58 miles above or below the arithmetic mid-point of each mileage block, and the individual differences range from .44 to 7.14 miles above or below. Furthermore, as between mileage blocks, excesses of mileages above the arithmetic mid-point offset almost exactly the deficiencies below the mid-point, as evidenced by an average net difference of +.60 miles per mileage block north of the gateway. South of the gateway, the actual weighted average hauls fall within 3.50 miles above or below the arithmetic mid-point of each mileage block. Here also, throughout the mileage block scale, actual hauls exceed the mid-point miles by about the same amount that they fall short of the mid-point, as indicated by an average net difference per block of +.05 miles.

As shown in Appendix B, the same picture is portrayed if the South's traffic study is substituted for that of the North. Based on South's traffic study, the weighted average hauls north of the gateway fall on the average within 2.65 miles above or below the arithmetic mid-point of each mileage block and south of the gateway within 3.67 miles.

In the final analysis, the extent to which any disparities within individual mileage blocks might distort the results produced by a scale of divisional integers founded on mid-point miles, would depend on the mileage block distribution of the total revenue to be divided.

[12]

It will be noted from Appendix A that most (in fact, 80 percent) of the North-South revenue is accounted for by hauls between 100 and 650 miles north of the gateway and between 250 and 850 miles south of the gateway. In a scale of divisional integers the factors for these mileage blocks will, of course, have the greatest influence in the division

of the North-South revenue. Weighing each of the differences between actual average hauls and arithmetic mid-points by the distribution of total revenue, produces a weighted average difference of ±2.11 miles north of the gateway and ±2.61 miles south of the gateway, in lieu of unweighted average differences of ±2.58 miles and ±3.50 miles respectively. This would indicate that there is even less disparity between actual average hauls and the arithmetic mid-point miles where the revenue to be divided is considered than would be indicated by a simple inspection of differences throughout the mileage block scale.

Conversely, the wide divergence between the weighted average haul in each mileage block and the maximum miles of each block is pointed out in Appendix A. Both north and south of the gateway, the mileage block mileages exceed the actual average hauls within each block by 25.10 miles on the average in the North and 24.55 miles in the South.

Another way of looking at this is by comparing the overall effective average haul with the actual average haul of the North-South traffic. The effective average haul is developed from car-miles which credit each car with miles at the extreme end of each 50-mile block. Based on the South's traffic study, the effective average haul north of the gateway

[13]

is 396 short-line miles compared to an actual average haul of 372 short-line miles. South of the gateway the effective average haul is 545 short-line miles compared to the actual average haul of 522 short-line miles. In other words, the effective average haul exceeds the actual average haul by 24 short-line miles north of the gateway and 23 short-line miles south of the gateway.

This proves that the arithmetic mean or mid-point is a reliable and fair measure of the miles of service rendered in each mileage block. It is possible, however, to measure more precisely the closeness of relationship between the

arithmetic mid-point and weighted average haul by more refined statistical measures. One measure of relationship between two series of values is the *coefficient of correlation.* This is used to measure the degree of change in one series of variables associated on the average with a change in another series. The results of this computation always fall within the range of 0 and 1—zero indicating absence of relationship, and 1 perfect relationship. Application of this measure to determine the degree of relationship between a scale of actual average hauls by mileage blocks and a scale of arithmetic mean or mid-point hauls resulted in a coefficient of correlation of .999965 north of the gateway, and .999931 south of the gateway, indicating extremely high degree of relationship between the two scales.

The second measure of relationship which aids in describing the relationship between two series of variables is the *standard error of estimate.* This is used to measure in absolute terms the range above and below

[14]

the scale of arithmetic means or mid-points within which the actual mileage block average hauls fall. Application of this measure reveals that north of the gateway, in 68 percent of the mileage blocks the average hauls would fall within 3.03 miles of the airthmetic mid-point, in 95.5 percent within 6.06 miles and 99.7 percent within 9.09 miles. South of the gateway in 68 percent of the cases the actual average hauls would fall within 4.51 miles of the arithmetic mid-point; in 95 percent within 9.02 miles; and in 99.7 percent within 13.53 miles.

Thus the existence of an extremely close relationship between mileage block mid-point and actual average haul is borne out by both visual inspection and statistical measurement. This doubly confirms that miles at the mid-point rather than miles at upper extreme of each mileage block properly reflect linehaul service in a scale of divisional integers. The use of the upper extreme of the mileage block to reflect linehaul service into a scale of divisional integers

adds 24.5 (50-25.5) miles not performed. The 24.5 excess mileage allowance is, of course, incorporated in the first mileage block as each additional mileage block is and should be credited with a full 50 additional miles. As the presently prescribed scale of divisional integers allows 12.06 integers for each 50 or .2412 for each mile of service, the reflection of linehaul service at the upper limit of the mileage block results in an excess of 6 integers (24.5 times .2412) in the first mileage block. It follows, of course, that the factor in each subsequent mileage block is six integers too high. This excess, in reality, has the same effect in application of the scale, but is in addition to the excessive terminal allowance which will be dealt with next.

[15]

II. Construction of Integer Scale Based upon Rate Scale Progression

An analysis of the scale of prorating factors prescribed in Docket 29885 indicates a close similarity to the Docket 28300, Appendix 18, Class 100 rate scale. As shown by Chart 1, the Docket 29885, Column 1 scale was apparently constructed by the subtraction of 26 integers (ostensibly a one terminal allowance in the Class Rate Scale)[1] from the rate per cwt. at 50 miles and from the rate per cwt. for 1600 miles, respectively. The resultant value (65 cents per cwt.) at 50 miles became the integer value for the 50-mile block as the base integer of the scale. The overall progression in the rate scale between 50 miles and 1600

[1] Derived as follows from Docket 28300 Appendix 18, Class Rate Scale:

	Cents per cwt.
a. Rate for 10 miles	64
b. Rate for 5 miles	58
c. Difference (a.—b.)	6
d. Two terminal factor (b.—c.)	52
e. One terminal factor (d.÷2)	26

miles was incorporated into the integer scale by adding 12.06 integers [2] for each subsequent 50 miles beyond the 50-mile block.

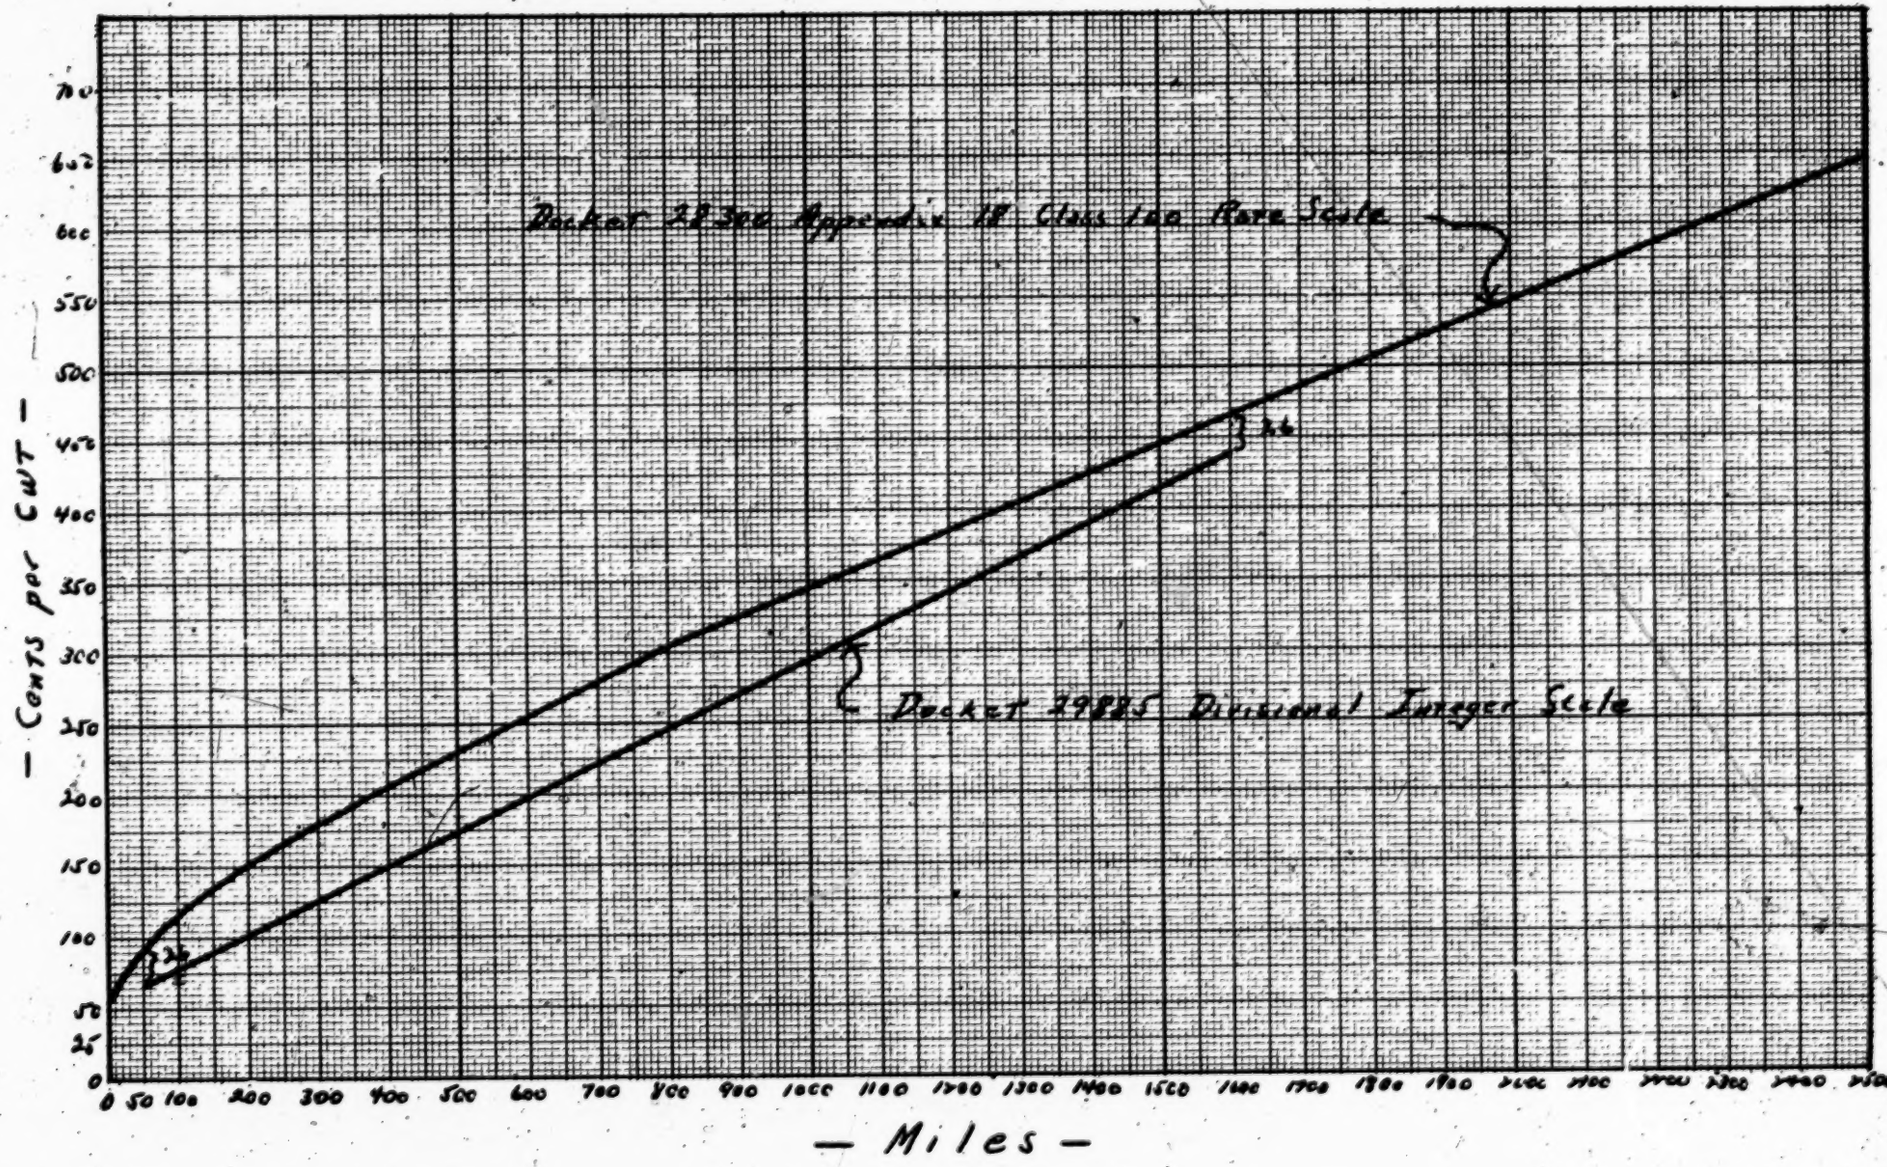
---

[2] Derived as follows:

Item	Mileage Block	
	50 Mile	1600 Mile
(1)	(2)	(3)
a. Appendix 18 rate (cents per cwt.) ..	91	465
b. One terminal factor (see [1] above)	26	26
c. Difference (a.—b.)	65	439
d. Total linehaul increment between 50 miles and 1600 miles (Item C, Col. 3 minus Col. 2)		374
e. Increment per 50 miles (Item d.÷31)		12.06

Chart 1

Docket 29985 Divisional Integer Scale vs. Docket 28300 Appendix 18 Class 100 Rate Scale



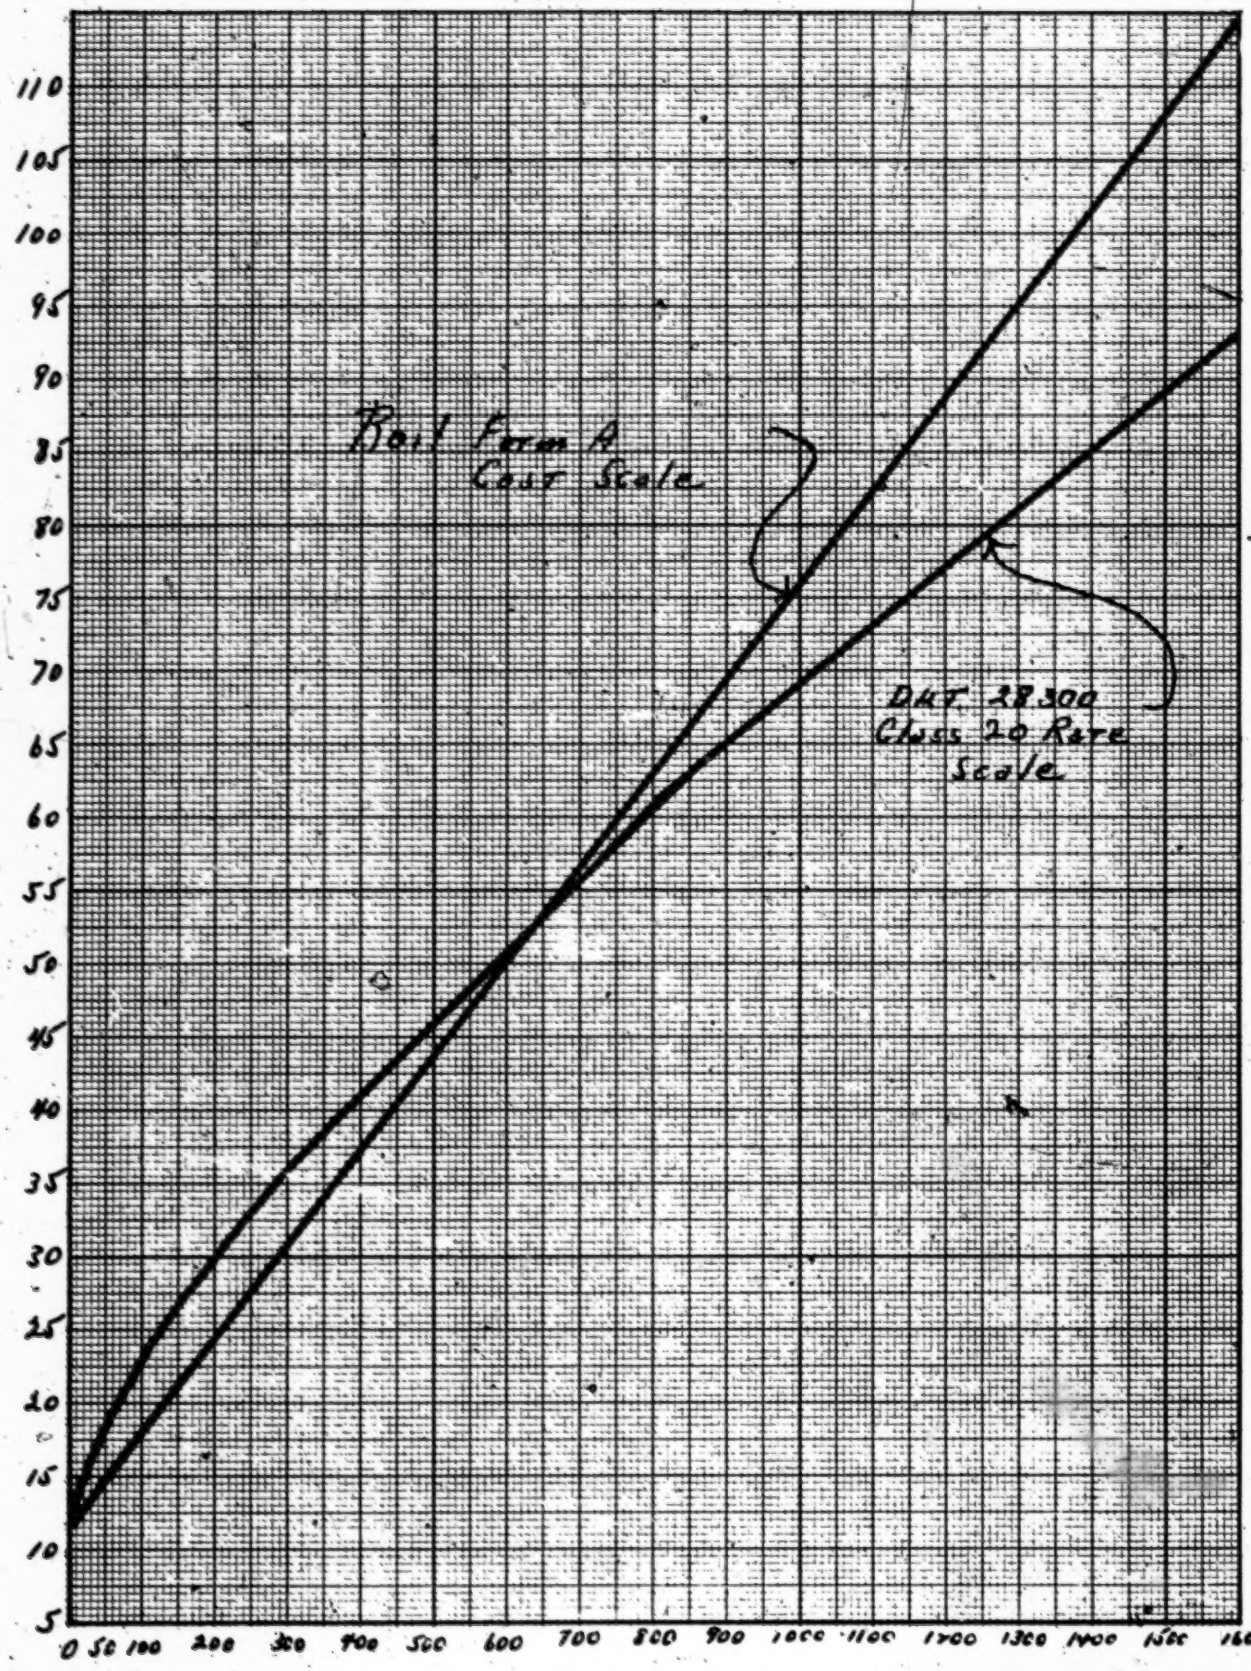


Chart 2

Docket 28300 Class Rate Scale vs. Rail Form A Cost Scale

SOURCE: V.S. 38, OPP. P. 16

[16]

As borne out by Chart 2, the Docket 28300, Appendix 18, class rate scale has very little relationship to a rail carload cost scale,[1] the reason being that costs of service do not control the contours of rate scales. The Commission recognized this in Docket 28300 as follows:

> "Costs alone do not determine the maximum limits of rates. Neither do they control the contours of rate scales or fix the relations between rates or between rate scales. Other factors along with costs must be considered and given due weight in these aspects of rate making." (262 I.C.C. 693)

While cost of service may have been a consideration in prescribing rate scales, "other factors" considered have caused the resulting rate scales to lose their identity with cost scales, particularly at the longer hauls. Most important of the "other factors" has been the depression of the scale at the longer hauls to enable traffic to move at longer distances. The Commission has held that even though the rate for each haul should contain both a cost and profit factor it was necessary to make rates which would yield less profit in the longer hauls and more profits in the shorter hauls because the shorter hauls could better pay the higher rate of return.

At the time of the Class Rate Investigation, 1939, the Commission's analysis of the construction of various class rate scales previously pre-

---

[1] The costs reflected in Chart 2 represent a combination of the Regional Rail Form A applications made by the I.C.C. Cost Section for the year 1956 and hereafter will be referred to as *Official-Southern average* costs. The regional applications for Eastern District and Southern Region which comprise a part of the Official-Southern composite are the same as used by Witness Heywood in Exhibit B to V.S. No. 3 at pages 13 and 14.

[17]

scribed by them showed the rate of progression was usually high in the first 75 miles, giving consideration to the expensive way-train service; beyond 75 miles the rate of progression was somewhat lower, giving consideration to the lower cost through-train movement; and in the longer hauls a "still lower rate of progression for the purpose of permitting traffic to move long distances." (262 I.C.C. 642)

Witness E. S. Hobbs, in his Exhibit No. 5 in the Docket 28300 Class Rate Investigation (published as I.C.C. Bureau of Transport Economics and Statistics, Statement No. 4031) attributed the changing rate of progression in rate scales to additional "other factors" such as economic policy requiring lowered rate of progression in the long hauls "to enable the shipper-manufacturer or shipper-producer to compete in a distant market with those located adjacent to the market area," and to carrier competition for through longhaul business with carriers of same and other kinds of transport. From a comparison of cost scales with rate scales he concluded that:

> "Freight rate scales in general, as previously noted, comprise, in addition to an initial curve, two or more different straight-line progressions usually beginning at 800 miles and occasionally also at 300 miles for which no ground is apparent in an analysis of costs." (I.C.C. Statement No. 4031, page 20)

A comparison of the Docket 28300 Appendix 18 class rate scale with a rail cost scale as shown in Chart 2 reveals that the progression in the class rate scale cannot be explained by an analysis of costs. The class rate scale has a progression that is curvilinear up to 360 miles, straight-line to 800 and another straight-line beyond, while the cost scale pro-

[18]

gresses in straight-line beyond 35 short-line miles[1] because

[1] Average haul in way-trains in Official-Southern regions, combined.

linehaul costs beyond the way-train service progress uniformly with distance. The Appendix 18 first class rate scale does then have built into it "other factors" which are commercial considerations designed to attract traffic, and which have nothing to do with relative service performed under a joint rate. That rail costs do in fact progress in a straight line as distance progresses has been established in studies of the Cost Finding Section, as discussed in Appendix G hereto.

A proper criterion for establishment of divisions of joint revenue is the relative service performed in providing the joint transportation, and cost of providing that service is a measure of service performed. The Commission recognized that cost of service is a prime consideration in determining divisions in *New England Divisions* (66 I.C.C. 199) and again at the time of prescribing the Docket 29885 scale. (See 287 I.C.C. 524-5). Witness L. E. Butler of the Eastern lines, a witness for respondents in this proceeding also advocated costs as being the proper standard for divisions. He stated at page 1 of his Exhibit E-487 in I.C.C. Docket No. 31503 as follows:

> "Based upon many years of experience in divisions matters I am of the opinion that relative costs of service here afford the fairest common standard by which to weigh the relative contribution of the participating groups of carriers in the performance of the joint transportation."

Also attached to that same Exhibit E-487, as Appendix C, was a

[19]

mileage scale of fully distributed costs for carload freight service prepared by Witness Heywood. Witness Butler described the scale as follows at pages 11 and 13 of his Exhibit E-487 in Docket 31503:

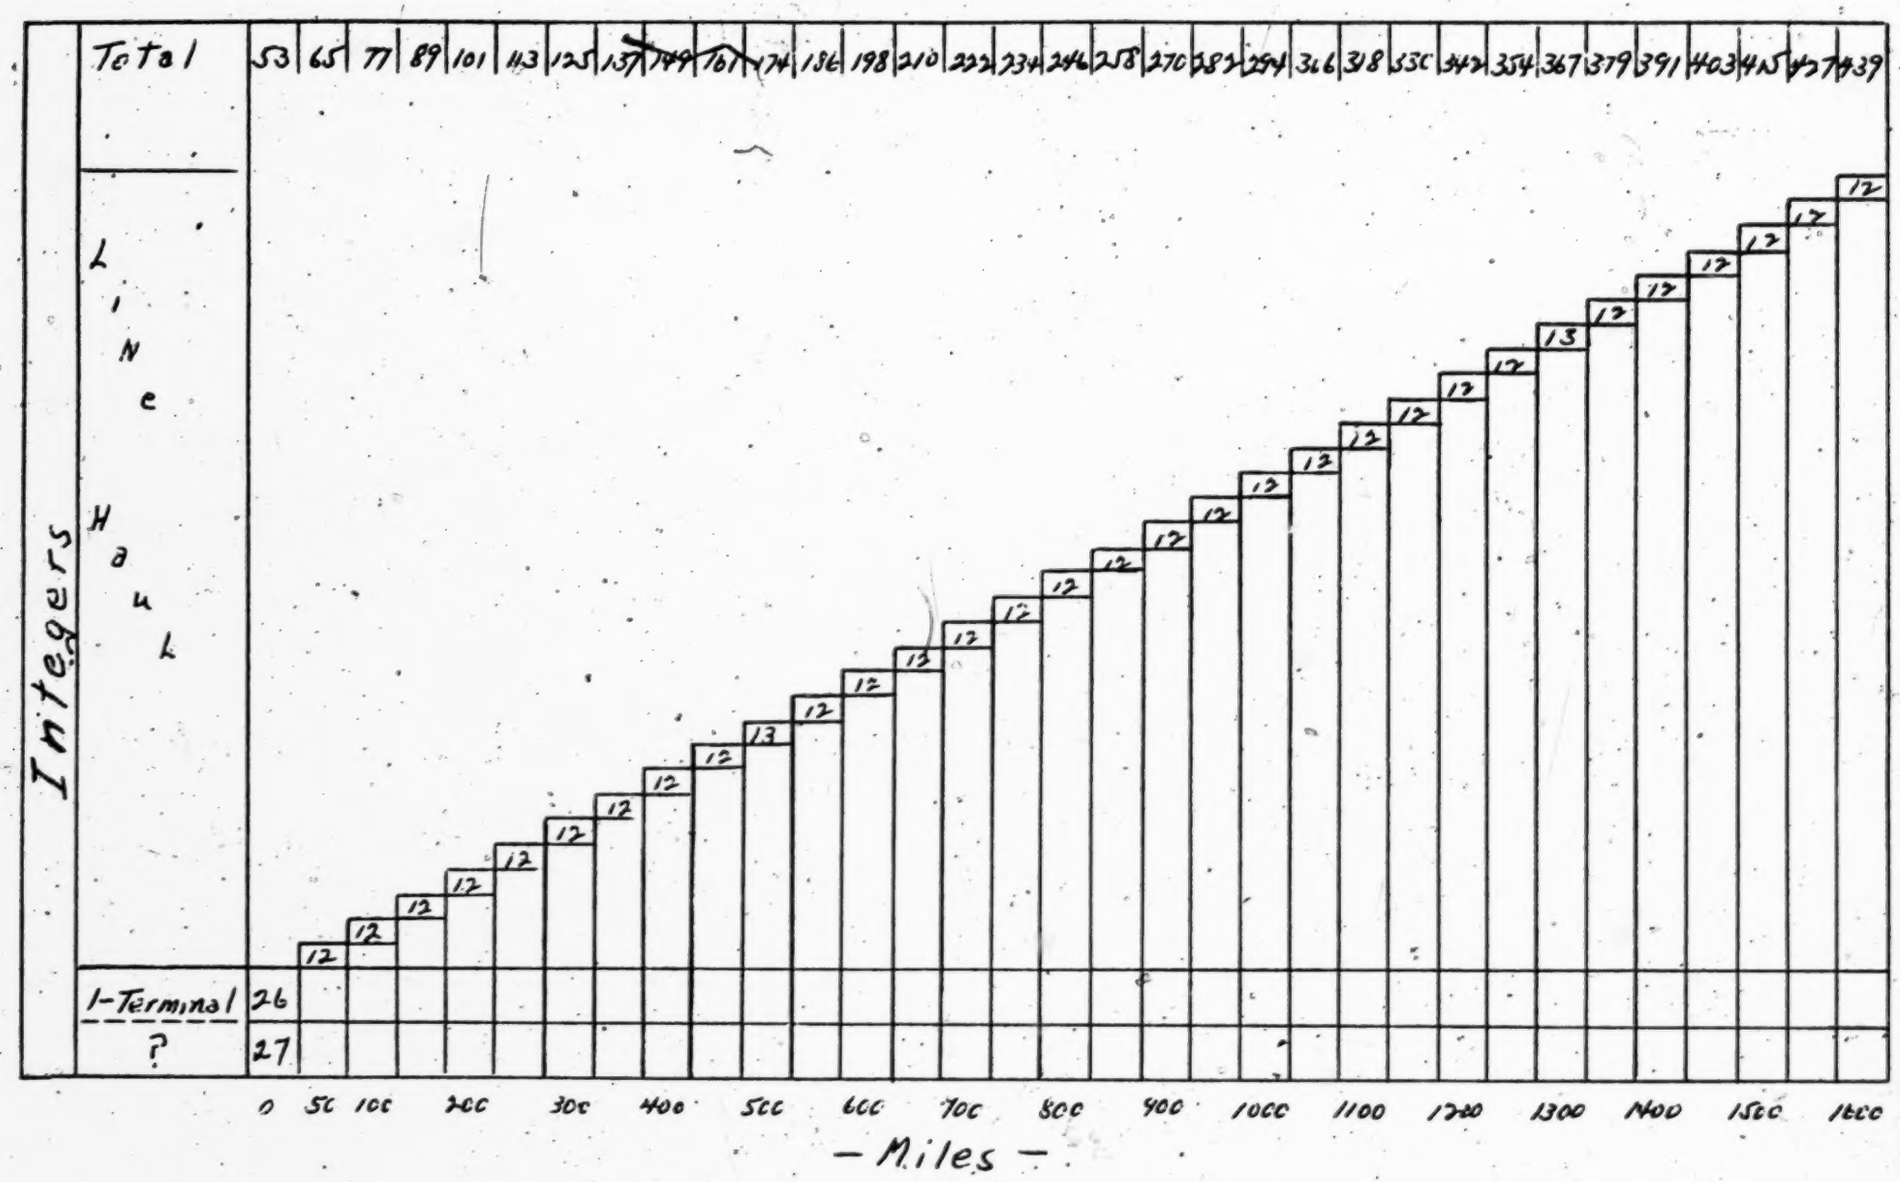
> "To illustrate what I think is a more sound use of relative service costs in the determination of divisional

prorating factors, I have set forth in Appendix C, attached hereto, mileage scales of fully-distributed costs for carload freight service for the Eastern and Western Districts as prepared by Witness Heywood. (Exhibit E-504, p. 38)

* * *

"This scale of relative costs is illustrative only, and I am not to be understood as testifying that these are necessarily the costs which the Eastern lines will ultimately urge as the most significant for Commission consideration. These scales of relative costs illustrate how the Eastern lines would like to have the Commission proceed in arriving at fair scales of divisional prorating factors."

The composite cost scale of Witness Heywood, to which Witness Butler referred and which appeared at page 38 of Exhibit E-504 in C.C.C. Docket 31503, was in the same form as page 17 of Exhibit B to Witness Heywood's Verified Statement No. 3 in this proceeding.



In Docket 28277, the Official-WTL Divisions Case, the Eastern lines criticized the use of a rate scale progression in a scale of divisional integers and advocated scales of prorating factors based on relative costs. At page 95 of Exceptions to Examiner's Report (first report) counsel for Eastern lines states:

"Since the proportionate contribution of the two groups of carriers to the performance of the transportation should furnish the primary consideration in the determination of a reasonable divisional basis, and since that contribution of effort or expense can ordinarily be best measured by relative costs of service, it is of major importance that there be taken into account the progressions which relative costs of service would produce in a scale of divisional factors predicated thereon."

Chart 3

Analysis of ICC Docket No. 29885 Divisional Integer Scale

Column I Scale

[20]

In their Exceptions to Examiner's second report in the same case, Eastern lines' counsel further stated:

> "'The Commission's objective should be to ascertain the relative amounts of service rendered by each group of lines as reflected in their relative service costs and to let that standard govern the distribution of the revenues. Scales of pro-rating factors based upon relative costs automatically make appropriate provision, on an average basis, for both the terminal and linehaul services rendered.'' (page 54)

Turning now to the Docket 29885 scale of prorating factors, it will be recalled that the 50-mile factor was arrived at by the deduction of 26 integers from the Class 100 rate per cwt. for 50 miles. If the 26 integers is accepted as a proper allowance for one terminal, then the 50-mile factor in the divisional scale would leave 27 integers unexplained.[1] This is illustrated graphically by Chart 3. A portion of this excess might be justified by the differential in way-train cost over through-train cost. However, Official-Southern Form A average costs for the year 1956 indicate that way-train costs per mile are 1.22 times the through-train costs per mile and that the average haul in way trains at either end of the haul is 18 miles (27 miles in the South and 14 miles in the North). If the 12.06 linehaul increment for each 50 miles in the divisional scale is attributable to through-train service, then the allow-

[21]

ance for excess way-train cost in the 50-mile factor would

[1] Computed as follows:

Factor for 50 miles	65
One terminal	26
Net	39
Less: 50 miles of linehaul	12
Balance	27

account for only 1 of the 27 unexplained integers.[1]

There remain therefore, 26 integers not accounted for by cost considerations which must be attributable to the derivation of the prorating scale from a rate scale which reflects a depressed progression.

The establishment of 26 integers as the terminal allowance in the Docket 29885 scale itself is statistically disproportionate to the through-train linehaul progression of 12.06 integers per each 50 miles. Conversely, if the 26 integers is a proper terminal allowance then the 12.06 increment for each 50 miles is an improper through-train linehaul progression. An appropriate statistical relationship would be a 21 integer terminal with a 12.06 linehaul progression or 26 terminal and 15.05 linehaul. Either of these reflects the relationship between the terminal and linehaul costs shown in the following table.

	One Terminal	50 Miles of through train cost	Ratios-50 Miles of through train cost to 1 terminal
Rail Form A Costs (Off.-Sou. average)	5.55¢	3.21¢	.58
Terminal equal to 26	26.0	15.05	.58
50 Mile Linehaul equal to 12.06	20.8	12.06	.58

Stated in another way, measured by Official-Southern Rail Form A costs, one terminal represents 86.4 miles of through-train linehaul service.

---

[1] Computed as follows:

1. Increment for 50 miles in through trains	12.06
2. Increment per mile in through trains (Item 1 ÷ 50)	.2412
3. Increment for 18 miles in through trains (Item 2 x 18 miles)	4.3416
4. Increment for 18 miles in way-trains (Item 3 x 1.22)	5.2968
5. Excess 18 miles in way over 18 miles in through (Item 4 minus Item 3)	.9552

[22]

When the starting point is the 12.06 linehaul progression the terminal factor would be 86.4/50 times the linehaul increment or 20.8 rounded to 21. Conversely when the starting point is a terminal of 26 the linehaul progression would be 50/86.4 of the terminal or 15.05.

By way of contrast, the Docket 29885 scale of prorating factors allows the equivalent of 215.6 miles (52 ÷ .2412) of through-train service in the present terminal factor. If we disregard the 26 unexplained integers, the remaining 26 integer terminal would allow the equivalent of 107.8 miles of through-train service. This exceeds the terminal allowance as measured by Form A cost relationships for Eastern District, Pocahontas Region, and Southern Region combined, as shown above, or individually as follows:

	Based on Form A Costs for:		
	Eastern District	Pocahontas Region	Southern Region
a) 50 miles of through-train linehaul when terminal equal 26 ..	12.74	14.82	17.94
b) Terminal when 50 miles of through-train linehaul equals 12.06 ..	24.8	21.2	17.4
c) Equivalent miles of through-train service in one terminal	102.7	88.0	72.1

It follows then that based on Official-Southern Rail Form A cost relationships, the integer value in the first 50-mile block (and each subsequent block) of the present divisional scale is 37 integers too high if we accept the linehaul progression of the scale as being proper. The 37 integers are computed as follows:

	Integer
1. Excess terminal (26-21)	5
2. Excess unexplained by costs	26
3. Excess from use of extreme and of 50-mile block in lieu of mid-point mileage	6
4. Total excess	37

Accordingly, the Docket 29885 Divisional Scale can be revised to reflect equal costs for the handling of the involved traffic by the deduction of 37 integers from the scale as follows:

Mile	Docket 29885 Scale	(Basis A) Revised Scale
50	65	28
100	77	40
150	89	52
200	101	64
250	113	76
1600	439	402

See Appendix D hereto.

If, on the other hand, we start with the 26-integer terminal factor, it is necessary to add 1.2 integers for the excess of 18 miles of way-train over 18 miles of through-train cost plus 7.7 for 25.5 miles of through linehaul service to produce the factor of 35 for the first mileage block. The scale should then progress uniformly by 15.05 integers for each subsequent mileage block as follows:

[24]

Mile	Docket 29885 Scale	(Basis B) Revised Scale
50	65	35
100	77	50
150	89	65
200	101	80
250	113	95
1600	439	501

See Appendix E hereto.

Either method of construction builds cost relationships into the scale which on application would produce revenue

division based on equality of costs. Its application for either short or long haul carrier will effect a division of the joint revenue in direct proportion to the relative service performed by each as measured by the cost of service.

Again, this presentation has been premised on the assumption that equality of cost levels prevail between the two participating groups of carriers. However, should there be found to exist a substantial differential, the fundamental method of constructing the divisional integer scale discussed herein would still apply, subject to such difference in the terminal costs or the linehaul costs as may be established with respect to the costs of handling the interterritorial traffic to which the divisional scale is applicable.

[25]

Conclusion

The present scale of divisional prorating factors prescribed in Docket 29885 is not constructed on the basis of cost comparisons. A scale of integers based on costs, assuming equality of the level of costs in Official and Southern territories, may be constructed by:

(1) Subtracting 37 integers from each factor in the present scale; or

(2) Starting with 26 integers as terminal, add 1 for way train, add 8 for 25.5 miles of linehaul, producing 35 for the 1-50 mile block, and add 15.05 for each succeeding 50-mile block; or

(3) Starting with unit costs and building a scale directly from costs. On the basis of equal costs for the handling of the involved traffic, Official-Southern average unit costs may be used as set forth in my Appendix F.

All three approaches produce equal factor scales that relate linehaul and terminal services.

As shown by the South's traffic study, 44.75 percent of the revenue (excluding arbitraries) from the North-South traffic accrues to the North under present Docket 29885 divisions. Based on equal costs, the North

[26]

would receive 43.07 percent of the total. This really credits the North not with equal but with 7.06 percent higher costs.[1]

On traffic moving by the Florida East Coast and other Southern carriers for 1,011 miles in the South which is the average haul on traffic handled by the F.E.C. to or from points 363 miles North of the gateway,

[27]

present divisions credit the northern carriers with 14.20

---

[1] Computed as follows:

	Average S.L. Miles	Equal Rail Form A Costs	Divisions based on: Equal Rail Form A Costs	Docket 29885 Scale
	(1)	(2)	(3)	(4)
a. North	372	$163.22	43.07%	44.75%
b. South	522	215.75	56.93	55.25
c. Total	894	$378.97	100.00%	100.00%
d. Ratio North revenue to cost (line a, col. 4 ÷ col. 3)				103.90%
e. Ratio South revenue to cost (line b, col. 4 ÷ col. 3)				97.05
f. Inflation in North's share above equal cost proportion. [(line d ÷ line e) — 100.00%]				7.06%*

*Alternative method of computation:

Let X = inflation necessary in North's costs to produce North's revenue proportion.

$$\text{then: } \frac{163.22\,X}{163.22\,X + 215.75} = .4475$$

$$X = 107.06\%$$

percent higher costs.[1] The use of the I.C.C. Docket 29885 scale for division of the North-South revenue will not reflect costs unless 37 integers are eliminated, or the rate of progression of the scale is increased to reflect appropriate and established cost relationships.

In conclusion, the I.C.C. Docket 29885 scale contains integers in the terminal allowance that cannot be accounted for by cost considerations. In showing this in my several examples and alternative scales which do reflect a relationship between line-haul and terminal based on costs, I am not to be understood as making a proposal for any specific scale of prorating factors. It is my understanding that a specific proposal will be made at a later stage.

		Divisions based on:		Ratio
	Average S.L. Miles	Rail Form At Costs	Dkt. 29885 Scale*	Revenue to Cost (Col. 3 ÷ Col. 2)
	(1)	(2)	(3)	(4)
a. North	363	29.26%	32.08%	109.64%
b. South	1011	70.74	67.92	96.01
c. Total	1374	100.00%	100.00%	
d. Inflation in North's share above "equal cost" proportion [(line a ÷ line b) — 100.00%]				14.20%

[1] Computed as follows:

* North integer interpolated 140.12; South 296.64; Total 436.76.

Appendix G, Page 1 of 5

STRAIGHT LINE PROGRESSION OF THROUGH TRAIN LINE-HAUL COSTS

Prior to the institution of the Cost Finding Section of the Interstate Commerce Commission, it was not definitely known just how rail line-haul costs progressed in relation to distance. It was often presumed, however, that the line-haul cost per mile was lower in the longer distances than for the shorter distances. This presumption was undoubtedly fostered by the lack of refinement in railroad cost accounting. This was recognized by the Commission in its report in the *Southern Class Rate* Investigation in the year 1925, wherein it was stated that "cost accounting [was] not a science which [had] been developed or applied extensively in railroad practice." (100 I.C.C. 631)

Only four years earlier the I.C.C. Bureau of Statistics had made an attempt to develop a recognized method for developing costs which could be used in rate cases to show costs separately for initiating and terminating a shipment and for moving a shipment a given distance between ter-

[1] Developed by combining I.C.C. cost sections Rail Form A applications for Eastern District, Pocahontas region and Southern Region for year 1956. Unit costs are after weighing for distribution of N-S traffic by type of car based on North's traffic study.

minals.[1] It is understandable then in reply to frequent criticisms of distance scales on the ground that "cost of service is not dependent on distance," the Commission did no more than to point out in the Southern Class Rate Investigation that:

> "This is true when service is reviewed in detail, for other factors affect cost, such as grades, curves, cost of construction, weather conditions, and density of traffic. A longer haul may actually be cheaper, because of the type of train used, than a shorter haul over the

> same line. Broadly speaking, however, cost of service undoubtedly does increase as distance increases . . ." (100 I.C.C. 611-2)

When service is reviewed in detail these other factors do affect costs and tend to produce different cost levels as between engine districts which are generally 100 miles in length. As a shipment moves over a series of engine districts having different cost characteristics, the cost per mile may well vary and produce an uneven progression of cost with distance, depending on the engine districts in which an individual shipment originates and terminates and the route over which it travels. Each through train in each engine district in which a car moves will consist of cars having previous hauls of varying lengths, and if all shipments and routings are considered, the cost in through trains will progress on the average in a straight line.

In the *Consolidated Southwestern Cases* (1927), it was recognized that costs are made up of two factors: (1) terminal cost and (2) line-haul cost, and that the terminal factor remains constant whatever the haul while the haul line is somewhat higher for the shorter hauls than for the

---

[1] I.C.C. Bureau of Statistics, "A Tentative Formula for the Separation of Frieght Operating Expenses Between Terminal and Line Services," October 10, 1921, mimeographed.

longer hauls. However, such a line-haul progression was attributable to the fact that "the service for 75 miles is usually in way trains, the most expensive freight trains operated by carriers" and that "through train service [is] considered less expensive per mile than local train service." (123 I.C.C. 203)

It was not until the establishment of the Cost Finding Section in the Bureau of Statistics, however, that any comprehensive studies were undertaken to support definitely any findings as to the progression

of line-haul cost. One of the first projects of the Cost Finding Section was the development of a detailed formula for the determination of territorial rail costs. The most comprehensive study developed, known as Rail Form A, was introduced in the Docket 28300 *Class Rate Investigation*, 1939, and later published as Senate Document No. 63, 78th Congress 1st Session.

Among other things this formula groups together for each transportation service the out-of-pocket costs which are associated with a common service unit that occasions the expense. Accordingly, the following out-of-pocket expenses are associated with gross-ton-miles:

1. Maintenance of running tracks, excluding train switching.

2. Maintenance of locomotives in running service.

3. Train operation expenses such as fuel, lubricants, water, crew wages, etc., excluding the portions chargeable to train switching.

As originally developed, the formula did not provide for a separate determination of gross-ton-mile cost for way and through trains. As since revised, the formula provides for a separate determination of a cost per gross-ton-mile for way and through trains, the way train cost being the more costly.

The formula next provides for a conversion of the cost per gross-ton-mile to a cost per car-mile, giving consideration to the tare weight of the car and weight of the load.

Out-of-pocket expenses considered to be directly variable with car-miles are:

1. Running portion of freight train car expenses.

2. Freight train supplies and expenses related to distance.

Appendix G, Page 4 of 5

These costs per car-mile plus the gross-ton-mile costs (expressed in terms of costs per car-mile separately for way and for through trains) make up the costs variable with distance.

That these costs for through trains do progress in a straight line as distance increases was shown by train studies made available to the Commission in Docket 28190, *New Automobiles in Interstate Commerce* (259 I.C.C. 475). Appendix 8 of the Commission's report in that proceeding contains the costs on both an out-of-pocket and a fully distributed basis for 175 separate movements for distances from 18 to 3021 miles. If these costs were plotted graphically in relation to distance they would show, as the Cost Section found, that on the average through train costs are associated with distance by a straight-line relationship. (259 I.C.C. 475) Further, the straight line would closely conform to the cost scale line portrayed in Chart 2 in the text of this statement, and likewise, the slope of the straight line would be steeper than that of the Appendix 18 Class Rate scale also shown on Chart 2.

It is understandable that such studies should produce a straight-line progression of through train costs from an anaylsis of each of the components of the line-haul cost group.

Maintenance of running expenses include roadway maintenance; the cost of repairing tunnels, bridges, trestles,

culverts, etc.; laying of rails and ties in repair of tracks, etc.

The miles of track repaired and facilities maintained determine the aggregate amount of dollars spent on maintenance, and the use made of the tracks and facilities determines the amount of maintenance required. It is therefore proper to associate the cost of maintenance

with the service unit which reflects this use, in this instance the gross-ton-mile.

Maintenance of locomotives in running service arises from the use made of the locomotive. Mileage run is a measure of use. Again, therefore, the revenue unit should be charged with the cost of locomotive in direct relation to miles travelled.

Train expenses such as wages of crew, the cost of fuel, water, etc., also vary with miles. For any given train crew wages are dependent on miles run. Train fuel, enginehouse expenses, water, lubricants, etc., are incurred through use of the locomotive. Here also, mileage is a measure of use and mile for mile this cost should be no different except for differences in operating conditions, etc., which may be occasioned in any mile throughout the haul.

The running portion of freight train car expenses are based on miles the car runs and are properly distributed to the revenue unit on the basis of car-miles.

Since the inception of the Cost Finding Section, cost accounting has become more refined, and assumptions made as to the nature of line-haul costs have been replaced by factual evidence establishing that through train line-haul costs progress in a straight line as distance increases.

VERIFIED STATEMENT NO. 39
OF JOHN P. COLE

[25]

The seven-day study figures for box cars are averages within the several territories and, if the proportion of special purpose box car loaded miles is higher in one territory than in another, the system average empty return for general purpose box cars would be changed because of the high empty mileage of these special purpose box cars. The following illustration demonstrates the effect that differences in proportions of special purpose box cars have upon the territorial average empty return ratio for all cars:—

Type	Loaded Miles	Empty Miles	Percent Empty of Loaded Miles
	NORTH		
Box (Special)	750	750	100
Box (General)	5,000	1,500	30
System Average Box	5,750	2,250	39
	SOUTH		
Box (Special)	200	200	100
Box (General)	5,000	1,500	30
System Average Box	5,200	1,700	33

The above table demonstrates that a seemingly small difference in the proportion of special box car miles in the north (750 out of 5,750, or 13%) than in the south (200 ont of 5,200, or 4%) has an important effect in increasing the system box car empty return ratio for the north. Starting with the assumption of equal empty return ratios, the difference in proportion of

• • •

[28]

In their pricing of the costs for the North-South traffic the Southern carriers apply to the auto parts traffic included in the traffic study 100 percent empty movement in both

Official and Southern territories. In order to arrive at empty return ratios which will have application to general purpose box cars, the empty and loaded miles for auto parts traffic in box cars must be eliminated in both territories from the seven-day study figures.

If general purpose box car empty return ratio is 30 in both territories and the empty return ratio on auto parts cars is 100, it cannot be denied that in pricing out the involved traffic a general purpose ratio of 30 should be used on all general purpose box cars and the special purpose ratio of 100 should be used on all special purpose cars in the traffic study. It would make no more sense to use the 39 as the empty return ratio in the North and the 33 as the empty return ratio in the South which ratios are taken from the Commission's seven-day study on each box car in the traffic study than it would to use 40 in the North and 79 in the South as the empty return ratios for each flat car whether TOFC or not. The seven-day study has moved progressively toward additional refinement in the types of equipment, but the 1956-1957 study is simply not sufficiently refined on box cars in order that the empty return ratios developed for such cars can be used indiscriminately in the development of box car costs on interterritorial North-South traffic.

On January 13, 1960, at the hearings in this proceeding (Tr. R-845-849) the Official Territory carriers were requested to join with the Southern carriers in compiling data which would provide information for determination of the empty return ratios separated as between box cars available for general loading and special device and assigned service box cars not suitable for return loading.

[29]

This request would have required only the furnishing of box car numbers and related loaded and empty car miles for the study days. The Official Territory carriers refused to participate in this study or otherwise to cooperate in the request. However, data is available from which a reliable

estimate can be made of the effect of the 100 percent empty miles of the assigned service or special purpose box cars have upon the empty return ratio for all box cars.

There is a very definite correlation between the percentage of vehicle parts to total traffic and the empty return ratios for various carriers. The greater a carrier's or groups of carriers' participation in vehicle parts traffic the higher the empty return ratio. This is shown by the following:—

OFFICIAL TERRITORY	Box Car Empty Return Ratio[2]	Percent Vehicle Parts 623 to Total Box Car Traffic[3]
Roads Serving Detroit Having Heavy Proportion of Vehicle Parts to Total Box Car Traffic[1]	49%	14.5%
Other Official	34%	4.2%
Total Official	39%	6.8%
SOUTHERN REGION	33%	2.6%

Thus, it may be seen that the Detroit roads which participate most heavily in the auto parts traffic have an extremely high empty return ratio for box cars. It may also be seen that Official Territory railroads taken as a whole and having a relatively higher participation than

[30]

Southern Territory roads in auto parts traffic have a correspondingly higher empty return ratio. I have undertaken, in Appendix C hereto, to establish statistically the approximate effect upon the empty return ratios of the vehicle parts traffic. It is seen that under Basis I the empty return ratio for box cars in Official Territory is 34.66 and in Southern Territory is 30.88. Under Basis II the adjusted empty

---

1. NYC, Wabash, C&O, DTI, and GTW.
2. ICC Seven-Day Study.
3. Percent of carloads of Vehicle Parts 623 handled in box cars and percent carloads of all traffic handled in box cars from ICC Statement No. TC-3, 1956, applied to total carloads handled, vehicle parts and total carloads all traffic, respectively from Freight Commodity Statistics, Year. 1956.

return ratio for box cars in Official Territory is 34.96 and in Southern Territory is 30.90.

Another factor causing the higher empty return ratios on box cars in Official Territory, particularly on the Detroit roads, is the influence of Canadian box car traffic which affects the Official roads to a very substantial but the Southern roads to a very limited extent. Detroit is an important gateway for Canadian traffic in that the New York Central, the Wabash, the Canadian National (Grand Trunk Western) and the Chesapeake & Ohio, use that gateway for handling Canadian traffic into and out of Canada. This is an important factor, since the volume of traffic moving between the U.S. and Canada in box cars during 1956 was more than twice the present volume of North-South box car traffic.

Appendix D hereto shows the volume and directional flow of box car traffic between the two countries. The basic data used in compiling this study was taken from Canadian commodity statistics. Tonnage received and delivered for each commodity was converted to carloads by use of average load factors derived from a waybill analysis for 1956 published by the Board of Transport Commissioners for Canada. Distribution of the carloads to box cars was made on basis of the I.C.C. one percent waybill sample.

* * *

[32]

As corroborative evidence that the Canadian traffic has a very heavy impact on the empty box car ratio, the seven-day study reflects 294,949 empty box car miles and 230,293 loaded box car miles, an empty ratio of 128 percent for Canadian National Lines in New England, which is almost exclusively a bridge carrier. Obviously a considerable part of the empty movement over this line represents cars which moved loaded into the U.S. over other routes.

I have shown in Appendix E results of computation on the Basis I formula for individual roads which adjusts the seven-day study to reflect an empty return ratio for box cars after the elimination of the loaded and empty miles

for auto parts traffic. It should be noted that the influence of Canadian traffic has not been taken into consideration in this Appendix.

Bearing in mind that the special device adjustment is merely illustrative and that the use of special device cars for other commodities is of relatfvely greater importance in the highly industralized east than in the south it is my conclusion that, as far as North-South traffic is concerned, the empty ratio for box cars is no greater in Official Territory than in the south. In my judgment a fair ratio for either territory would be 30 percent.

* * *

[34]

The South has relatively little participation in refrigerator meat car traffic. Our traffic study shows that relatively few cars of fresh meat move between the North and South. Only 1,642 cars of fresh meat (215) move between North and South, as compared to 80,379 refrigerator cars in the study. Thus, fresh meat comprises only about 2 percent of the total refrigerator cars moving between the North and South. Therefore, meat movements can contribute only relatively few empty miles on North-South traffic. That the South's total participation in meat traffic is relatively less than Official Territory participation, is shown by the following table taken from the Commission One Percent Waybill Study TC No. 3:—

[35]

	Official Originations and Terminations (Cars)	Southern Originations and Terminations (Cars)
Fresh Meats (215)	212,000	20,000
Total Refrigerator Car Commodities	1,107,700	282,500
Percent Fresh Meat Cars of Total Refrigerator Cars	19.1%	7.1%

The Southern Territory carriers' participation is far less relatively and actually than the Official Territory carriers'

participation in that traffic. To the extent the meat traffic moving between the North and South is creating empty mileages, the carriers participating in the movement should participate in the costs. However, the Southern Territory carriers should not be called upon to share in the costs for the handling of empty cars which have not moved, or do not move, traffic in which they could or can participate in a share of the revenue.

The proper approach for empty return ratios on refrigerator cars, as in case of box cars, is to apply separately the empty return ratios of 100% for such special movements as fresh meats (215) and bananas originating at New Orleans on the Illinois Central, and to develop an appropriate empty return ratio for the general movement of refrigerator car traffic which are not influenced in different degress in the respective territories by the empty return ratios for specialized commodities.

The refrigerator cars which handle the North-South traffic, other than fresh meats and bananas referred to above, are summarized below by car ownerships:—

[36]

Car Company	Car Miles	Percent of Total	Percent of Total Excluding Other
(1)	(2)	(3)	(4)
Fruit Growers Express (FGE)	38,421,000	43.3	52.6
Western Fruit Express (WFE)	18,753,000	21.1	25.7
Burlington Refrigerator Express (BRE)	5,009,000	5.6	6.9
Atchison, Topeka & Santa Fe (SFRD)	3,652,000	4.1	5.0
Merchants Dispatch Transportation (MDT)	3,443,000	3.9	4.7
Northern Refrigerator Car Line (NRC)	1,902,000	2.1	2.6
Pacific Fruit Express (PFE)	1,825,000	2.1	2.5
All Others	15,808,000	17.8	—
Total	88,813,000	100.0	100.0

As it may be seen, Fruit Growers Express cars participated in over 38,421,000 of the general refrigerator car miles on North-South traffic. This is more than twice the number of car miles participated in by Western Fruit Express cars, the second largest handler of North-South refrigerator car traffic, and almost eight times the number of car miles participated in by Burlington Refrigerator Express which ranked third in total refrigerator car miles in North-South traffic. The above listed car companies handled more than 80 percent of the North-South traffic moving in refrigerator cars. Therefore, the empty return ratio of those companies are representative of North-South traffic.

Unlike the situation as to box and other per diem cars for which no loaded and empty mileage statistics are regularly maintained, empty return ratios for these car ownerships are available based on the actual records of loaded and empty miles for the full year and are thus not subject to the unknown amount of sampling error in the seven-day study.

Upon request of Fruit Growers Express, empty and loaded refrigerator car miles were furnished for the year 1956 separated by carriers. The information furnished is shown in Appendix F for Class I carriers. The empty to loaded ratio for Official Territory for the Fruit Growers

[37]

Express cars for 1956 is 75. In Appendix G is shown the empty and loaded miles for the Southern carriers for the other car-owning companies listed in the table above other than Fruit Growers Express. This information was obtained from replies to questionnaires directed to the accounting departments of the Southern carriers. The composite for the Southern Class 1 carriers is as follows:

Car-Owning Company	Loaded Miles	Empty Miles	Ratio Empty to Loaded	Weighted Ratio
(1)	(2)	(3)	(4)	(5)*
Fruit Growers Express	62,145,054	56,744,160	90.35	47.5
Pacific Fruit Express	35,161,348	24,459,858	69.56	17.9
Western Fruit Express	29,116,175	25,734,476	88.39	6.1
Northern Refrigerator Car Line	19,345,217	17,235,219	89.09	4.5
Atchison, Topeka & Santa Fe	14,274,414	10,210,147	71.33	3.4
Merchants Dispatch Transportation	10,998,811	8,929,974	81.19	2.1
Burlington Refrigerator Express	7,023,989	6,309,170	89.82	2.2
Total	178,065,008	149,623,004		83.7
Empty to loaded ratio—		84.0		

In this instance the empty return is 84 whether such ratio is developed by weighting individual car company's participation in the Official-Southern traffic or whether the car miles loaded and empty are aggregated for all car companies and an empty return ratio developed from the total. There can be no question but that the above ratio of 84 based on records for the full year is a more accurate measure of the ratio of empty to loaded car miles for the South on North-South traffic than the 76 developed in the system average seven-day study. For example the figure of 90 for Fruit Growers Express not only represents the entire year of 1956 but also the Fruit Growers Express empty ratio is consistently within that range for years subsequent to 1956.

[39]

* * *

Unquestionably the difference between the system average figures and the empty ratio for FGE cars of Official Territory carriers is caused by heavy empty miles

* This is obtained by multiplying Column 4 this table by Column 4 from table on page 36.

in Official Territory on traffic moving solely within Official Territory and between Official Territory and territories not involved in this proceeding. A great part of the difference is occasioned by the heavy empty mileage (empty to loaded ratio of 98) on meat refrigerator cars moving within Official Territory and between that territory and Western District.

Therefore, I conclude that it is improper to use the ratios developed in the Commission's 1956-1957 seven-day study on the North-South traffic here involved because of the distortions caused by transportation conditions existing within the various territories which contribute to the averages for a territory but which do not accurately reflect the conditions on traffic moving between the two territories. As I have stated, I am of the opinion that the empty to loaded ratio which should be used for box cars (other than auto parts) in each territory is 30 and that the empty to loaded ratio which should be used for refrigerator cars (other than bananas and meat) in the North is 75 and in the South is 84.

[40]

III

CAR COSTS

This portion of my statement deals with car repair expenses, depreciation on cars and return on investment in cars. These costs will be referred to collectively as car costs.

Rail Form A type of car cost scales present no problem in dealing with car costs for refrigerator and tank cars. For these so-called mileage cars, the car costs calculated on a system average basis are not used but, instead, the nationally applicable mileage rate for the particular type of car is substituted.

It is the car costs for the remaining type of cars, which are the so-called per diem cars, that present the cost problem in this divisions proceeding. There is a national per diem rate curently applicable to such cars. How-

ever, Rail Form A as applied by Witness Heywood does not employ the same unit cost in each territory although Official-Southern traffic moves in the same cars in each territory. Instead, a system average figure was developed by Witness Heywood for each group of roads and the resulting very different unit costs are applied North and South of the gateways.

Appendix I, attached, shows the distribution of Official-Southern traffic by type of car. As shown, 15 percent of the cars are mileage cars and the remaining 85 percent are per diem cars.

Car costs make up an important part of the difference between the unadjusted Rail Form A costs of Official and Southern carriers. Built

[41]

into the Rail Form A comparisons for a box car with a 28.9 ton load moving 350 miles with one terminal are the following car costs:*

Eastern District	$17.91
Eastern District plus Pocahontas	16.20
Southern Region	12.22

Thus, Rail Form A unadjusted average costs include car costs for Eastern District which are $5.69 or 46 percent higher than for Southern Region, and for Eastern District plus Pocahontas $3.98 or 32 percent higher than for Southern Region. This relationship would apply not only for box cars but also for gondola, hopper, flat and stock cars, since the same average Rail Form A unadjusted car costs per car and per car mile are applied by Witness Heywood to each of the per diem cars. The foregoing difference in car costs would not apply for refrigerator and tank cars since the uniform nation-wide mileage rate appropriate for such cars is substituted for system average car costs in develop-

* This table assumes equal empty return ratios. Use of the unadjusted empty return ratios from the seven-day study of system average box cars compounds the effect of different car costs.

ing costs for refrigerator and tank cars.** Thus, a refrigerator car mile or a tank car mile is assigned the same car cost per mile irrespective of territory or carrier.

* * *

[43]

(1) The Cars Used in Handling Official-Southern Traffic as Contrasted with the System Car Fleet

A basic reason why application of Rail Form A by territories produces the higher car unit costs in the North than in the South and why a territorial application of Rail Form A produces results which are inappropriate for use in this proceeding is because an application of Rail Form A is not an application to the cars in which North-South traffic moves but an application to the conglomerate mixture of all types of cars owned by each group of roads, many of which are not used to any appreciable extent in handling North-South traffic. The following table based upon the Southern Territory carriers' traffic study shows the following distribution of Official-Southern traffic moving in per diem cars:

[44]

Distribution of Official-Southern Traffic Moving in Per Diem Cars by Type of Car

Type of Car	Cars Originated or Terminated	Car-Miles		
		North	South	Both Territories
Covered Hopper	41,116	16,043,708	26,732,997	42,776,705
Box	667,358	285,785,368	376,309,921	662,095,289
Gondola	73,745	28,988,300	35,806,875	64,795,175
Open Hopper	7,100	1,941,995	2,877,550	4,819,545
Flat	29,605	14,268,479	14,996,852	29,265,331
Stock	3,971	2,077,381	1,398,264	3,475,645
Total Per Diem Cars	822,895	349,105,231	458,122,459	807,277,690

** This is true even where a railroad owns a refrigerator car moving over its own lines. The Northern lines use the national mileage rate for all refrigerator cars, for example, including Illinois Central cars moving over the Illinois Central.

Percent Distribution of Official-Southern Traffic Moving in Per Diem Cars by Type of Car

Type of Car	Percent of Cars Originated or Terminated	Percent of Car Miles		
		North	South	Territories Both
Covered Hopper	5.0	4.6	5.9	5.4
Box	81.0	81.8	82.1	82.0
Gondola	9.0	8.3	7.8	8.0
Open Hopper	0.9	0.6	0.6	0.6
Flat	3.6	4.1	3.3	3.6
Stock	0.5	0.6	0.3	0.4
	100.0	100.0	100.0	100.0

As shown, over 80 percent of the per diem cars handling Official-Southern traffic are box cars and less than one percent of the Official-Southern traffic moves in hopper cars. As to all types of cars, the Official-Southern traffic moves in the same car from origin to destination, so that the consist of the car fleet employed in handling Official-Southern traffic is the same in both North and South.

[45]

The system average car costs developed by Witness Heywood do not measure the cost of the box cars handling Official-Southern traffic but, instead, the composite effect of the car fleet owned by the respective groups of roads. The Commission's Transport Statistics in the United States for the year 1956 shows the system ownership of per diem cars by Southern and Official carriers as follows:

Type of Car Per Diem Cars	Official Territory (Eastern District Plus Pocahontas)	Official Territory Percent of Total	Southern Territory	Percent of Total
Box	300,100	36.9	100,191	37.9
Flat	12,310	1.5	6,461	2.4
Stock	5,359	.7	1,514	.6
Gondola	142,358	17.5	40,228	15.2
Open Hopper	329,271	40.4	86,712	32.8
Covered Hopper	20,580	2.5	9,974	3.8
Rack	2,233	.3	19,270	7.3
Other	1,975	.2	86	—
Total	814,186	100.0	264,436	100.0

The Commission's seven-day study shows the car miles of cars within Official and Southern Territories as follows:

Per Diem Cars	Official Territory (Eastern District Plus Pocahontas)	Percent of Total	Southern Territory	Percent of Total
Box	88,715,813	44.8	36,898,919	54.0
Flat	4,544,918	2.3	4,465,611	6.5
Stock	3,266,027	1.6	304,602	.5
Gondola	17,156,095	8.7	7,357,766	10.8
Open Hopper	79,288,985	40.0	16,141,974	23.6
Covered Hopper	4,309,178	2.2	2,834,885	4.1
Other	793,192	.4	308,117	.5
Total	198,074,208	100.0	68,311,874	100.0

[46]

In contrast to the 82 percent of the car miles on per diem cars of the North-South traffic consisting of box car miles, Rail Form A car costs for Official Territory are developed from a car fleet which consists in far greater degree of other types of cars, particularly open top cars (open hopper or gondola cars). Moreover, the consist of the car fleet in the system averages are different for Official and for Southern territories, whereas the Official-Southern traffic involved in this proceeding moves in an identical car fleet.

The importance of the differences in consists of car fleets underlying the system averages and the consist of cars handling the Official-Southern traffic arises from the fact that different types of cars have different characteristics. One significant difference as between types of cars is in their degree of utilization, as shown in the following table:

Car Type	Car Miles Per Year
Box	19,635
Gondola	9,503
Hopper, Open	11,827
Hopper, Covered	13,816
Stock	16,953
Flat	18,996

Source: Commission seven-day study for 1956-1957, and Transport Statistics in the United States, 1956.

Such differences in utilization would have a strong effect on the unit costs per car mile for the different types of cars, and the system average cost for all types of cars would reflect the utilization of the average car, not the box cars primarily handling the Official-Southern traffic.

[47]

It should also be noted that Rail Form A separates car repair costs between mileage and time for all cars on a national 70-30 basis and car return and depreciation between mileage and time for all cars on a national 45-55 basis. Since the same percentage separations would not apply to cars with widely different degrees of utilization, the separation factors used in Rail Form A can be validly applied only on a national basis.

The difference in consist of car fleets is further aggravated by the fact that the age of the Official Territory rail carriers' car fleets in 1956 was considerably greater than that of the Southern carriers, particularly because of the age of open hopper cars. The following table makes this comparison:

	Percent Owned Cars in Excess of 25 Years Old	
	Open Hopper Cars	All Freight Cars
Eastern District	48.60	41.711
Official Territory	40.04	38.52
Southern Region	27.68	29.74

Particularly significant is the fact that 94 percent of the Pennsylvania Railroad's open hopper cars were in excess of 25 years old in 1956. Unquestionably, the repair costs on the older open hopper cars in Official Territory are contributing heavily to the car costs in that territory. However, since so few open hopper cars are involved in the movement of the North-South traffic herein, the high repair costs on these cars should not be used to develop the car costs applicable on North-South traffic. Open hopper cars are used to the greatest extent for the transporta-

tion of coal, and the car costs on a total of 329,721 open hopper cars in Official Territory strongly influence application of Rail Form A to Official Territory.

[48]

A Rail Form A application to the carriers in the North, which develops the same car costs for all per diem cars irrespective of consist, utilization, or age reflects to a substantial extent the expenses incurred for the handling of open hopper cars within the North. It is improper to apply such costs to Official-Southern traffic which moves only to an insignificant extent in open hopper cars. Car costs for application to the Official-Southern traffic should reflect the same consists of cars North and South and should further reflect the fact that the Official-Southern traffic moves predominantly in box cars.

(2) The Distorting Effect of Per Diem Debits and Credits.

In Rail Form A as applied by Witness Heywood, the total car cost for each group of roads is first developed and then net per diem debits or credits are added or subtracted.

The Rail Form A car costs include depreciation computed in relation to original cost. Return is computed at 4% (after allowance for federal income taxes) on net original cost. This is the equivalent of approximately 6% of the net original cost.

The per diem rate which is debited or credited under Rail Form A is determined on a very different base under a formula established by the Commission. Depreciation is computed in relation to reproduction cost new. Return is computed at 6% of reproduction cost new less depreciation.

With the great inflation experience in the last two decades, the per diem formula, using the reproduction cost base, produces costs of car ownership for depreciation and

return which far exceed the Rail Form A costs using the original cost base,

* * *

[53]

which is 41 percent higher. This relationship is inherent in the use of inconsistent bases as applied to roads with a per diem credit position (as Carrier A) when compared with a road having a per diem debit position (as Carrier B).

The foregoing example is not as extreme as some of the results produced by application of Witness Heywood's Rail Form A is determined on a very different base under duces *negative* unit costs for return on cars over the Clinchfield. That is, an application of Rail Form A with the per diem credits gives that carrier a negative return car cost. There can be no question but that a Clinchfield box car moving over the Clinchfield accrues a car cost including repairs, depreciation and return. However, because of per diem credits generated by Clinchfield hopper cars while off line and because Rail Form A averages box and hopper car costs, the absurd result of a negative return on box cars is produced on the Clinchfield.

As stated, the reason the Rail Form A formula produces different results from the per diem formula is because of the different bases used in each formula. At the time of Rail Form A's development (for application to 1939 operations) per diem credits presented no such problem because the reproduction cost less depreciation was not significantly different from original cost less depreciation. However, with inflation in the war and post-war period, the costs of replacing cars was and is far in excess of those costs of the cars they replace. And the longer a car remains in service the more the disparity becomes between original cost and reproduction cost.

[54]

There is no rational basis for permitting the paper profits reflected in per diem credits, generated largely by

use of L&N and Clinchfield hopper cars on Eastern District roads, to influence the relative car costs to be applied to Official-Southern traffic which does not move in hopper cars.

Witness Heywood compounds the error of his car cost theory where he uses Eastern District car costs alone without consideration of Pocahontas Region. This method disregards the per diem credits on the Pocahontas lines and considers only per diem debits on the Eastern District roads. The Official Territory carriers as a whole are only slight per diem creditors, as compared with Southern Region, as will be seen in the following table:

	Per Diem Net Debits and Credits (Year 1956)	
Southern Region	Net Credit	$23,987,115
Eastern District	Net Debit	24,568,808
Pocahontas Region	Net Credit	27,974,634
Official Territory	Net Credit	3,405,826

It should be noted that the use of Eastern District costs alone would lose the offsetting net per diem credit influence of the Pocahontas roads and although the Eastern District per diem debit is largely the result of the use of Pocahontas and other foreign line hopper cars for the transportation of coal which is not involved in this proceeding.

Because per diem debts and credits, computed on a different base, markedly affect system average cost for a reason that has nothing whatever to do with the relative costs of handling Official-Southern traffic, the traffic involved in this proceeding should be priced out using car

[55]

costs not distorted by per diem debits and credits. Use of a national basis of car costs avoids this distortion, since per diem debits and credits are substantially offsetting on a national basis.

* * *

[62]

V.
MISCELLANEOUS DATA BEARING ON COSTS

(1) Factors Underlying Difference Between Northern and Southern Unadjusted Rail Form A Costs.

The Northern lines rely on unadjusted Rail Form A costs without showing the components of those costs that give rise to higher system average costs in the North. For example, the 1956 Rail Form A unadjusted cost for a 28.9 ton load in a box car having one terminal handling and 350 short line miles for Official (Eastern District plus Pocahontas) is $158.01. The comparable unadjusted Rail Form A cost for Southern Region is $135.29. These two figures are used to claim 17% higher costs in the North.

In Mr. Remington's application of adjusted costs to the Official-Southern traffic, it is shown that no such higher cost level applies in the handling of the Official-Southern traffic. My purpose here is to identify, on the system average basis, the source of the differences in Official and Southern costs. The following table, based on analysis of the Cost Finding Section Rail Form A working papers, shows separately the factors which occasion the difference of $22.72 between the box car cost of $158.01 for Official and $135.29 for Southern Region.

	Item	Dollars of / Difference Between Official and Southern Region
1.	Differences in Empty Return Ratios	$ 3.11
2.	Differences in Car Costs	3.93
3.	Differences in Switching Costs	11.98
4.	Switching and Terminal Companies	2.19
5.	Platform Costs	2.62
	Total	$23.83

As shown, these five items of difference account for $23.83, which is more than the entire $22.72 difference between the Official and Southern costs. In other words, except for these several items, all other rail costs, including all transportation and maintenance of way accounts, overheads, constant costs, and passenger deficits (even with suburban service deficits included in the North) are, in the aggregate, no higher in the North than in the South.

For this reason, it is important that the particular segments of cost underlying the unadjusted Rail Form A costs which cause the higher level of average costs be given special scrutiny in this proceeding. Empty return ratios, car costs and Switching and Terminal Companies are discussed in previous sections of this statement. Mr. Remington is treating with platform costs and the adjustments in car count which effect switching costs per car.

VERIFIED STATEMENT NO. 40
OF J. J. REMINGTON

[11]

The unit costs developed by Witness Heywood differ from those which the Cost Finding Section develops in several respects:

[12]

(1) * * *

(2) Witness Heywood, when applying cost to traffic excludes passenger and LCL deficits. The Cost Finding Section includes these deficits in its fully distributed costs.

(3) * * *

(4) Witness Heywood uses as his return base book investment on road and equipment plus cash and materials and supplies, less recorded accrued depreciation and amortization. The Cost Finding Section uses as its return base elements of value for road property and equipment, plus working capital and present value of land and rights, less accrued depreciation and normal amortization. He uses 6% for his rate of return, rather than the 4% used by the Commission. This treatment of return and property base does not make any significant difference as between Official and Southern Region carriers.

The Cost Finding Section of the Interstate Commerce Commission applies the Official Territory Lines' cost to traffic moving in Official Territory when it prices out the burden study traffic, and also uses Southern Region Lines'

[13]

costs in Southern Territory. The Southern Region Lines costs it uses are the same as those underlying page 13 of Exhibit B of Mr. Heywood's Verified Statement No. 3.

Table 6 below is based on the Official Territory Lines' and Southern Region Lines' unit costs of the Cost Finding Section for the same year as that used by Witness Heywood (1956), applying those unit costs to the traffic study for comparison with the revenue of North-South traffic.

TABLE 6

Costs and Revenues

Applying Cost Section Unit Costs[1] to Southern Lines' Traffic Study

	Percents
South of Gateway:	
Revenues	55.36
Costs	53.36
Difference	— 2.00
North of Gateway:	
Revenues	44.64
Costs	46.64
Difference	+ 2.00

[1] Cost Section Official Territory unit costs to all services north of gateway and Southern Region unit costs to all services south of gateway.

Table 6 is to be compared with Table 5. Table 5 uses Witness Heywood's adjusted Rail Form A unit Costs, while Table 6 uses the Cost Finding Section's unadjusted Rail Form A costs.

In order to provide a common base for the cost applications which follow in this statement, we have used the Cost Finding Section application of Rail Form A as the base for adjusting Rail Form A to fit Official-Southern traffic. We thus start from the same base as does the Cost Finding Section in applying costs to traffic in its burden studies.

• • •

Exhibit C, p. 9:

In Docket 28300, the Cost Section obtained the data necessary for correction of the car count by special questionnaire (Exhibit 11, pages 28-29). Special questionnaires are no longer necessary because the Waybill Section of the Commission's Bureau of Transport Economics and Statistics regularly obtains the essential facts in reconciling its 1% waybill sample with the freight commodity statistics. The waybill sample reports each car of tidewater coal, for example, as a car originated and terminated and not as a car originated and delivered to connections as in the freight commodity statistics. This difference in definitions is recognized in the Bureau's Statement No. 543, *Waybill Statistics-Their History and Uses*, page 21:

> "Because the 1-percent sample is drawn from terminated waybills, the results must be interpreted in the light of existing waybilling practices. For example, there are differences between certain established waybilling practices of the railroads and the reporting rules under which the Commission's freight commodity statistics are compiled. These differences affect comparisons between the waybill data and these statistics. The most important variations involve tidewater and rail-lake-rail hauls. In these cases the railroads issue separate waybills for each rail movement, whereas only one origination and one termination are reported in the freight commodity statistics."

• • •

[14]

The primary difference between the type of cars is in their utilization. It is reasonable to assume that the differences in the cost per day or per year for repairing cars is insignificant as between the several types of cars, and this assumption is in accordance with Witness Symes' testimony in this case (at transcript page R-213). Any differences in depreciation or return costs per day or per year

would depend upon differences in investment per car for the various types of cars and my check of the investment per car for cars purchased by the important Northern and Southern roads does not show any significant difference in investment per car by type of car.

Significant differences between the types of car are shown when the utilization by type of car is analyzed from the Commission's statistics. This comparison is shown in Table A below:

TABLE A

Car Utilization by Type of Car

Type of Car	Cars Owned U.S.	7-Day Study Car-Miles (000)	Percent of Total Car-Miles Col. (3)	Annual Car-Miles (000) (3) x (4)	Car-Miles per car owned per year; (5) divided by (2)

[1]. There is no definition of "Other Cars" in the questionnaire underlying the Cost Finding Section 7-Day Study. The amounts are too small to significantly affect any other type of car.

* * *

[19]

It is to be emphasized that any differences in the separation of the U. S. car costs by type of car would have no appreciable effect on the relative costs of Official-Southern traffic produced by the application of adjusted Rail Form A costs to our traffic study. The separation of U. S. car costs by type of car is a desirable refinement, and makes the application of car costs consistent with the use of U. S. tare weights by type of car. What is important is that a common car cost be applied to each car of Official-Southern traffic, moving as it does in the same car in both North and South. This avoids the serious distortions in the cost relationships resulting from the use of sytem average car costs, as discussed by Witness Cole.

* * *

[21]

Table 11 below shows the cost-revenue results when the unit costs of the territorial group in which a carrier is classified is applied to the services of that carrier, whether north or south of the gateway.

TABLE 11

Costs and Revenues

Territorial Adjusted Unit Costs Applied as the Traffic Relates to the Roads in Each Territory, and Short Line Railroad Adjusted Unit Costs.

	Percents
South of Gateway:	
Revenues	55.36
Costs	55.45
Difference	+ .09
North of Gateway:	
Revenues	44.64
Costs	44.55
Difference	— .09

Table 11 is to be compared with Table 7. When adjusted territorial average costs are used as shown in Table 11, the Northern Lines' cost claim on additional revenues from North-South traffic disappears.

All of the costs shown in this statement are fully distributed costs. Exhibits D and E of Witness DeButts' Verified Statement No. 14 shows that the suburban service portion of the passenger deficit for Eastern District Lines is $44,969,450. This money covers only operating expenses, rents and taxes. The Northern roads in their presentation to the Senate Committee, entitled *The Rail Suburban Service Problem,* at page 8 described "Item III" (from which the $44,969,450 is taken) as "the estimated net railway operating income deficit in suburban service." Rail Form A includes as a cost return on investment. On page 18 of the Northern roads presentation to the Senate Committee, it is

[22]

pointed out that for the Pennsylvania Railroad:

> "The total ledger valuation at New York is $93 million and in Philadelphia $78.8 million, or a grand total of $171.8 million for the particuar facilities and equipment reflected on the table. A minimum fair return on these ledger values would exceed $10 million annually, . . ."[1]

By relating the return on investment for suburban service on the PRR to the suburban service expense deficit, an estimate of the total return after Federal Income Taxes that should be related to suburban services for the eight "Eastern Territory Suburban Railroads" is $36,500,000. This specialized deficit and related return on investment is not properly chargeable against the freight shippers and connections, and thus this money must be excluded from the constant costs of Eastern District Lines in Table 10 above. The resulting cost percentage is compared with the revenue proportions in Table 12 below.

TABLE 12

Costs and Revenues

Official Territory Lines' Adjusted Unit Costs Applied to the Services North of Gateway and Southern Region Lines' Adjusted Unit Costs Applied to the Services South of Gateway.

(Excluding Suburban Service Deficits)

	Percents
South of Gateway:	
Revenues	55.36
Costs	55.76
Difference	+ .40
North of Gateway:	
Revenues	44.64
Costs	44.24
Difference	— .40

[1] The Rail Form A ratio for Eastern District to include income tax expense in a return at 4% is 1,56191 for 1956. Thus the total return would be 6.25% (1.56191 x 4%). 6.25% of $171.8 million is $10.7 million.

• • • •

VERIFIED STATEMENT NO. 40A
OF J. J. REMINGTON

[6]

Witness Seigler, in his Verified Statement No. 42, describes the switching studies made on a representative sample of Official-Southern traffic. I have worked closely with Dr. Deming in the random selection of the cars to be studied and Witness Seigler in summarizing the results of these extensive studies. The studies described by Witness Seigler produce engine minutes per car at origin or destination in the South specifically related to the North-South traffic. As Witness Seigler and others in this proceeding have testified, there is a substantial movement of volume traffic within the South which depresses the system average switching minutes per car. Use of the switching minutes per car for Official-Southern traffic developed by Witness Seigler automatically eliminates this effect of volume traffic on the switching costs of the Southern roads.

In order to apply switching minutes per car for Official Territory which likewise eliminate the influence of volume commodities, I have followed the method used by the Cost Finding Section in the burden studies to eliminate the influence of lower minutes per car which are imputed to the origination of coal and coke and to the origination and termination of iron ore and anthracite coal to washers. Only in the case of anthracite coal to washers is the Cost Finding Section adjustment based on a study of the switching services. It is, to say the least, doubtful whether the engine minutes per car based upon the experience of Pocahontas Lines may properly be imputed to the orgination of

[7]

coal on Eastern District lines. Nevertheless, we have followed the procedure of the Cost Finding Section, including the assignment of lower-than-average minutes per car to such coal traffic, and have used the resulting higher-than-

average adjusted minutes per car for traffic other than volume commodities. These adjusted minutes per car for Official Territory produced by this method are 27.65 minutes for box cars, and 30.72 minutes for other cars.

These resulting minutes per car for Official Territory, as applied to Official-Southern traffic, are averages which eliminate the influence of volume commodities but, in other respects, represent average switching at large cities and small cities, yard switching and train switching. The Cost Finding Section has found a correlation between size of cities and switching minutes per car, and an appropriate question here is whether the Official-Southern traffic originates or terminates at large cities or small towns in Official Territory to a greater or lesser extent than average traffic. Analysis of the Official-Southern traffic in relation to the size of the cities served shows that the switching minutes set forth above and used in our further adjusted costs overstate the services performed in Official Territory on Official-Southern traffic, both in absolute terms and in relation to the minutes per car used for the Southern roads. The results of this analysis, using the Cost Finding Section's factors for switching by size of cities, are set forth and explained in Exhibit H, attached.

VERIFIED STATEMENT NO. 41
OF E. W. BURROUGHS

[5]

The high rated nature of the Southern-Official paper movement, taken by itself, also appears from the comparison with fully distributed costs, the basis which the Northern lines seek to apply:

Commodity		South to Official		
		Revenue	Fully Distributed Cost	Ratio (%) of Revenue to Fully Distributed Cost
653	Woodpulp	$ 9,796,300	$ 6,575,000	149
657	Newsprint paper	193,600	123,300	157
659	Printing paper NOS.	1,384,200	876,100	158
661	Wrapping paper	8,856,900	6,371,900	139
663	Paper bags	7,805,400	5,824,900	134
665	Paper and paper articles	640,500	441,700	145
667	Printed matter NOS.	52,400	22,900	229
669	Paperboard and Fibreboard	34,132,400	26,459,100	129
	Total	$62,861,700	$46,694,900	135

Source: "Distribution of Rail Revenue Contribution by Commodity Groups—1956", Table 7.

The foregoing figures indicate the relationship of revenue and fully distributed costs for the Southern-Official paper traffic taken by itself. However, this is an entirely unrealistic approach in view of the integral handling of pulpwood traffic necessary to the rail haul of the paper. Pulpwood taken by itself, shows the following relationships in the Cost Finding Section figures:

Commodity		South to South		
		Revenue	Out-of-Pocket Cost	Ratio (%) of Revenue to Out-of-Pocket Cost
409	Pulpwood	$32,767,400	$42,169,800	78

These misleading figures are based on Rail Form A unadjusted costs applied to pulpwood and, in the previous tables, to paper. Pulpwood in the South moves in large cuts of cars with lower than average switching and other services per car. Actual studies made of the pulpwood movement in 1956 showed that the revenues received from pulpwood by the study roads exceeded their out-of-pocket costs of handling that commodity by about $3 million. The following table shows the contribution of pulpwood to all southern railroads based on annual contribution to study roads as developed in the 1956 studies:

VERIFIED STATEMENT NO. 45
OF ROSS H. PRATER

[4]

Freight rates and charges are a most important factor in the operation of our company and in our ability to remain competitive with other processors of steel, because of the relatively high cost of producing steel from scrap. The cost of procuring and transporting scrap in effect determines not only the area from which we draw our raw material but also the area in which we compete in the distribution of the finished products.

This proceeding, as I understand it, seeks to readjust the present equal factor basis of dividing North-South inter-territorial revenue to allow the northern carriers at the expense of the southern carriers a greater proportion of the revenue than they now receive—the estimated effect being the loss to the southern lines of between $25,000,000 and $30,000,000 per year. We at Atlantic Steel are concerned that the loss of any such large amount of revenue as $25,000,000 per year will either subject us to increased pressure for a further boost in railroad freight rates or seriously handicap the southern lines in the maintenance and provision of the type of service and equipment necessary to our company.

VERIFIED STATEMENT NO. 47
OF H. CECIL JONES

[4]

United States Sugar Corporation is now wholly dependent upon the services and traffic policies of the Southern railroads.

My understanding is that in these proceedings the lines in Official territory are asking that their factors of the joint through interterritorial rates between the North and the South be increased to an extent which would produce about $25 Million annually for the Northern carriers and a like amount to be deducted from the Southern carriers' proportions of the revenue.

It is my opinion, after years of study of rail transportation, rates, services and schedules, that the Northern lines are not entitled to such diversion of revenue from the Southern railroads to the Northern lines.

The Sugar Company fears that any such diversion of revenue growing out of the changes in prescribed divisions will seriously affect the ability of the Southern railroads to give us the fine, dependable rail schedules, equipment and services upon which we rely.

We fear that such diversion from the Southern railroads to the Northern lines might have the effect of causing the Southern lines to file applications for an additional general increase in freight rates including rates on sugar, molasses and sugar cane pith—our products.

Any change in our present rate structure as related to competitive rates would seriously lessen and curtail our ability to compete in the distant markets, and perhaps would cause us to reduce to a serious extent, and curtail, or discontinue our long-haul movements. . . .

[3]

Our Position

Information supplied to our Association indicates that the railroads in the Eastern District (including the Pocahontas Region) and otherwise referred to as Official Territory, including the Central Region, New England Region and Pocahontas Region, are again seeking to have the prescribed divisions of joint interterritorial rates between the North and the South so changed that the integers, applicable for hauls north of the gateways, be increased so as to produce an estimated increase in the operating revenues of the Northern Railroads by about $25,000,000 per annum. This, in turn, would cause a like *reduction* in the operating revenues of the railroads in the Southern Region, by $25,000,000.

Our Association joins with the Southeastern Association of Railroad and Utilities Commissioners in opposing *any* increases in the Northern Lines integers of divisions of joint interterritorial rates between the North and the South.

VERIFIED STATEMENT NO. 62
OF C. B. CULPEPPER

[5]

In these proceedings the Eastern Railroads seek an additional $25,000,000.00 or more annually on traffic moving between the North and the South. The entire amount would come out of net revenues of the Southern lines. Based upon Interstate Commerce Commission's Statement M-100 twenty-five million dollars is the equivalent of 18% of the net revenue of Southern lines in 1959, but would add only 9½% to the net revenue of the Eastern railroads. Divisions prescribed by the Interstate Commerce Commission are continuing and should twenty-five million dollars annually be taken from the Southern railroads and given to the Eastern railroads it would in the short period of ten years amount to one-quarter of a billion dollars. It is reasonable to assume Southern railroads would be compelled to try to recoup this very sizeable proportion of their net earnings by every means open to them, such as increased rates, curtailed service, purchase of fewer locomotives and cars, deferred maintenance of equipment and facilities and reduced employment.

The economic health of Atlanta, perhaps more so than most cities, is dependent upon adequate and dependable rail transportation. For example, the vast automobile assembly plants operated by Buick, Oldsmobile, Pontiac, Chevrolet and Ford are utterly dependent upon Atlanta's railroads as are the more than 1300 manufacturing firms here, to say nothing of the 1200 national firms who maintain warehouse facilities and distribute from Atlanta. The Atlanta Freight Bureau and its more than 500 industrial and commercial members have a vital interest in the welfare of the railroads serving Atlanta. . . .

VERIFIED STATEMENT NO. 69
OF GEORGE C. LA BREE

[5]

• • •

Minimum Divisions

It is the position of Eastern railroads that in prescribing divisions for apportioning the revenue on the interterritorial traffic here involved the Commission should prescribe a 15 percent minimum division for each group of roads that performs origin or destination terminal service, for the reason that any basis of interterritorial divisions for apportioning the revenues on the traffic here involved should be subject to such a minimum division so as to provide sufficient protection for that origin or destination terminal service.

Railroad experience has definitely proved that terminal expenses cannot be controlled as readily as can line-haul expenses, which results in a tendency for terminal costs to rise faster than do line-haul costs.

The following table reflecting fully distributed unit cost factors on the I.C.C. Basis as shown in various exhibits of Witness J. L. Heywood, fully illustrates this situation.

[6]

Fully Distributed Box Car Costs

	Eastern District	Percent of 1950	Southern Region	Percent of 1950
Year 1950				
Terminal	5.033¢	100.0	3.113¢	100.0
Line Haul	0.060342	100.0	0.049497	100.0
Year 1959				
Terminal	8.476¢	168.4	4.653¢	149.5
Line Haul	0.074343	123.2	0.056353	113.9

Fully Distributed Refrigerator Car Costs

	Eastern District	Percent of 1950	Southern Region	Percent of 1950
Year 1950				
Terminal	7.034¢	100.0	4.412¢	100.0
Line Haul	0.099958	100.0	0.090710	100.0
Year 1959				
Terminal	11.169¢	158.8	6.162¢	139.7
Line Haul	0.141870	141.9	0.114440	126.2

Thus, as the Commission will here be prescribing divisions for the future, it should afford ample protection for the higher terminal costs of the Eastern lines which, having the shorter hauls, would suffer the most unless such protection was afforded. The generally longer hauls of the Southern lines would help them to absorb their terminal costs, which are lower than those of Northern lines in any event.

For the purpose of interterritorial group divisions the relative territorial Form A Cost Scales used as factors as suggested by Witness Cornelius do not in all instances provide ample protection for the short haul service and higher terminal costs on part of the Eastern lines. For example, the scales of composite rail costs for the year of 1956 shown on page 17 of Exhibit B to Witness J. L. Heywood's Verified Statement No. 3 show costs for the Eastern District at 50 miles of 8.1 cents per 100 pounds, and for the Southern Region at 1,000 miles of

[7]

49.6 cents, at 1,100 miles of 54.2 cents, and at 1,200 miles of 58.9 cents, which would produce cost percentages north of 14 percent, 13 percent, and 12 percent, respectively. A statement showing representative movements taken from Eastern lines' traffic study (Exhibit A to V.S. No. 1) illustrating such situations is attached as Appendix B. Those percentages are too low to protect the important terminal service of the Eastern carriers.

If divisions were based upon the relative costs as adjusted by Witness Remington, without provision for a minimum, Eastern lines for their shorter hauls would be limited to even smaller proportions.

In several recent major interterritorial divisions cases the Interstate Commerce Commission has prescribed a minimum of 15 percent of the total revenue for the railroads having the short hauls in the territory they serve. See *Official-Western Trunk Line Divisions,* 269 ICC 765, 786; *Official-Southern Divisions,* 287 ICC 497, 547; *Official-Southwestern Divisions,* 287 ICC 553, 597.

Also, in line with the Commission's action in providing a minimum division of 15 percent in those cases, the Eastern railroads and Western Trunk Line railroads parties to the October 4, 1955 Agreement (Exhibit 2 in I.C.C. Docket No. 31627), when arriving at a settlement of the issues as to approximately 70 percent of the traffic involved in that case, provided for a minimum division of 15 percent.

In addition, it will be noted by referring to the attached Appendix B that the short-line mileages north of Potomac Yard, Va., to and from Baltimore, Md., stations are from 43 miles to 49 miles. Under the Southern lines' position the Eastern lines' factor for those short-line mileages would be predicated on the mid-point mileage of the 50-

[8]

mile block, i.e., 25.5 miles, in spite of the fact that the Baltimore stations are located in one of the most expensive terminal areas in the East.

Protection for the short haul service of an originating or terminating group can be accomplished by (1) designing factors that will result in 15 percent for the short hauls, or (2) by providing in the order that the percents resulting from the prescribed factors will be subject to a minimum of 15 percent. This would be fair since it would accord the same protection to Southern lines when they have a corresponding burden of short-haul service plus terminal.

VERIFIED STATEMENT NO. 73
OF F. H. CLARK

[1]

My name is F. H. Clark. My qualifications have been previously stated in Verified Statement No. 72 in this proceeding.

It is my purpose in this statement to analyze from an operating standpoint the basis for the adjustments in the Rail Form A factors for the empty return of box car equipment in Official Territory incorporated in Southern lines' studies. Without undertaking to comment upon the propriety of corresponding adjustments for Southern Region, I shall demonstrate that insofar as Official Territory is concerned, Southern lines' adjustment of the box car empty return ratio is premised upon various assumptions respecting the utilization of such equipment by Official Territory carriers which are distinctly at variance with actual operations.

It is Southern lines' contention, advocated principally by Witness Cole and reflected in the cost adjustments introduced by Witness Remington, that the average empty return ratio for box cars employed in the Rail Form A applications of Witness Heywood overstates the empty return experience of Northern lines appropriate to the involved traffic. This claim is predicated upon the several assumptions, first, that disregarding incidental gondola and flat car shipments, vehicle parts are transported within Official Territory in designated "special

[2]

device" box cars "not suitable for return loading" (p. 28) and, hence, not in general purpose box cars; secondly, that auto device cars and other assigned special device cars invariably experience a 100 percent empty return movement to points of origin (R. 1693); thirdly, that there is a much

greater utilization of such special equipment, especially that designed for vehicle parts, within Official Territory than in the South; and lastly, that after adjusting for these circumstances, the box car ratio for Official Territory would not be significantly different from that for Southern Region. It was my assignment to test the validity of these assumptions.

Witness Cole seeks to justify the adjustment made in the empty return ratio for Northern lines, which he urges as a "reliable estimate" of the influence of the assumed 100 percent empty miles of assigned or special purpose box cars upon the empty return ratio for all box cars on the ground that Northern lines refused to join with Southern lines in a special study (V.S. 39, pp. 28-29). Northern lines rejected this request because "they do not believe that the proposed study would be of any value." Some of the reasons for this opinion will appear from my statement.

The Southern roads' request was that Northern lines join them in furnishing data for the separation of box car empty return ratios "as between box cars available for general loading and special device box

[3]

cars not suitable for return loading." Their request also stated:

> "The next following form, filled in for purpose of illustration, shows that the data requested, together with the equipment register, will permit the parties to develop box car empty return ratios separately for box cars available for general loading and special device box cars not suitable for return loading."

Implicit in the request, therefore, was the idea that one could get the number of a car and then, by reference to the Equipment Register, determine that it was a "special device box car not suitable for return loading." Actually, no such thing is possible. It is erroneous to assume that special device box cars are not suitable for return loading. In fact, they are used for return loading. Moreover, the ratios

which would be obtained upon the erroneous premise of Southern lines would then have to be applied by assuming a necessary and inevitable relationship between a commodity class and a type of equipment, a relationship which does not exist. They would obviously have applied the ratio developed for "general purpose box cars" on all traffic that moved in box cars between the North and the South except vehicle parts; they would have assumed that all vehicle parts moved in special device cars and have applied to that traffic the ratio which they purported to have developed for special device cars. Each such application would have

[4]

been wrong. This is because vehicle parts cars are, in fact, used for general traffic and also because it is erroneous to assume that vehicle parts do not move in general purpose cars. These facts I shall show, later in this statement, with reference to studies which we have made on the subject. The foregoing, then, indicates the first reason for our declining to join in the study suggested by the Southern lines.

A second reason is that whereas the Commission's seven-day study embraced days that were spaced through a twelve-month period, the three-day study suggested by the Southern lines would have been for "Monday, January 25, 1960; Wednesday, February 3, 1960, and Friday, February 12, 1960," or a period covering a span of but 18 days. It is obvious that the period was not representative because of this short span. Moreover, specially equipped cars were in heavy demand during the period because there was a steel strike during the 1959 Fall period when model changeovers take place and the movements of parts was, therefore, greatly curtailed in that period and, in consequence, was heavy during the period which would have been covered by the proposed three-day study, thus resulting in a heavy demand for the cars and a consequent greater empty return movement to meet this demand than would have applied throughout the year. Of course, a study embracing days

throughout a year's period would have resulted in an intolerable delay in the disposition of this proceeding, and such a study would still have been subject to the unwarranted assumptions mentioned above.

[5]

In general, much of the empty mileage incurred by box cars, particularly those designed for general loading, is unrelated to any particular shipment or placement order. The cars gravitate toward the areas where potential demands exist or are anticipated. Under such circumstances, the empty mileage cannot reasonably be attributed to any specific use or any identifiable shipment, either prior or subsequent to the empty movement, and must be considered as a general burden of doing business. For example, when an empty general purpose box car is received by a Southern carrier from a Northern connection, or vice versa, having previously moved loaded in the opposite direction, the empty return may well be completely disassociated from the preceding trip. The empty movement could well be motivated by a desire to minimize per diem payments or, in compliance with AAR orders, aimed at providing equipment to territories in need of same, or the receiving railroad may send the car to car shortage areas of its own road in no way concerned with the origination territory of the previous load. A good illustration of empty haul not assignable to other than system operation is a car moving into storage after a loaded trip. That handling has no connection whatever with the previous load. In my opinion, therefore, it is impossible, in such instances as here under consideration, to associate empty mileage with either the prior

[6]

or the subsequent loaded movement or to fix the occurrence or point in time at which such mileage may be said to cease to be related to the prior load and thereafter be attributed to the subsequent load.

Witness Cole, nevertheless, undertakes to show that the territorial box car empty return ratio for Official Territory is inflated by the empty mileage incurred by special device cars moving in other than North-South traffic. He contends further, that this inflation does not occur to the same degree in the Southern Region. The difference between the two territories is said to be the participation of Northern lines in auto parts traffic.

There is no doubt that numerous examples can be found of special device box cars and assigned box cars, employed in particular movements, which incur empty hauls back to the place of loading. But special device and assigned service is not peculiar to Official Territory alone. Shippers in other territories are demanding the same type of service.

On the other hand, there is a recent trend, at least in Official Territory, which I shall illustrate more fully hereafter, toward controlled utilization of special type cars aimed at eliminating empty mileage. These cars, therefore, rather than inflating the empty miles within Official Territory have a depressive effect upon the territorial empty return ratio.

But even recognizing the fact that in some cases special device cars

[7]

are returned empty to origin in all territories, there is no justification whatsoever for the uncorroborated assumption that this is invariably true of every special device car in Official Territory, and it is this assumption which forms the foundation of the adjustments made by Southern lines' Witness Remington.

Witness Cole undertook to show, at page 29 of his Verified Statement No. 39, the existence of a correlation between system average box car empty return ratio and the proportion of total traffic represented by Commodity Group 623 Vehicle Parts. For this purpose he selected the carriers serving Detroit, New York Central, Wabash, C&O, DT&I

and GTW. Accordingly, the four Eastern lines, first named, together with the Pennsylvania and the Baltimore and Ohio, undertook to make spot checks of their transportation records to determine if, in fact, all auto parts transported in box cars required special device box cars, as assumed by Mr. Cole and, secondly, to determine whether such special device cars were limited to special service again, as assumed by Mr. Cole, or were utilized for traffic generally. The investigation on the Pennsylvania was conducted under my supervision and the results of the corresponding inquiries on the New York Central, Wabash, C&O and DT&I were likewise coordinated through my office and the results furnished to me for incorporation into the exhibits hereinafter

[8]

described. The basic data in those exhibits was abstracted to a large extent from conductors' wheel reports supplemented, where necessary by reference to other operating and auditing department records. No effort was made to cover any particular period of time on any of the study lines nor to examine the records pertaining to all trains moving on the dates selected for investigation. We simply sought sufficient illustrations to demonstrate the facts already well known to Eastern operating officers that there is not, in actuality, the sharp delineation in commodities loaded between general purpose box cars and special device cars that Witness Cole would assume. For the purpose of these exhibits, I have adopted the definitions used by Mr. Cole. Classes LC, XI, XM, XME, VA, VM and VS have been considered to be general service box cars. Classes XAP, XAR, XML, XMP, XMR and XT have been considered to be special device box cars.

My Exhibit No. 1 is a "SUMMARY OF EXAMPLES OF VEHICLE PARTS TRANSPORTED IN OTHER THAN SPECIAL DEVICE CARS (CONSTRUCTED ESPECIALLY FOR THEIR MOVEMENT)." I show here numerous movements of general purpose XM and XME box

cars, both within Official Territory and between Official Territory and Southern Region loaded with auto parts. Other examples of similar movements could be found every day of the year. It should be pointed out that the train movements shown in Exhibit 1 are those for the wheel reports in which the cars were found and do not reflect the entire movements of the particular illustrative cars or even the

[9]

entire movements of the trains. The entire movement of each car can be approximated by reference to the destination shown. Origins are not shown in most instances because the wheel reports do not contain this information. The important fact to be derived from Exhibit 1 is not the particular details of any specific shipment but, rather, the frequency with which general purpose box cars are shown to be used for loading vehicle parts. This common operating practice would render any calculation of car miles for special device cars as in the study requested by Southern lines' meaningless as a measure of the empty return experience for auto parts traffic. And since XM and XME class cars are general purpose box cars, no accurate allocation of empty miles to a particular category of traffic on whatever basis assigned could be made from the conductors' wheel reports without tracing the previous and subsequent movements of each car.

My Exhibit No. 2 is a "SUMMARY OF EXAMPLES OF THE MOVEMENT OF VEHICLE PARTS IN SPECIAL DEVICE CARS NOT SPECIFICALLY DESIGNED FOR VEHICLE PARTS TRANSPORTATION AND ACTUALLY USED FOR THE TRANSPORTATION OF MANY COMMODITIES.", Although Mr. Cole refers to special device cars as a single category, thereby implying that the characteristics of all such cars are similar, it should be noted that only certain special device cars are constructed especially for

[10]

auto parts while others are not so designed. This exhibit demonstrates that such cars are used interchangeably in that auto parts are frequently found to move in special device cars not constructed expressly for that commodity. While XML cars are included in the special device listing, they are defined in the Official Railway Equipment Register, ICC RER No. 337, as follows:

> "XML-Loader Equipped. A house car similar in design to 'XM', either fully or partially lined with steel perforated side walls or equipped with protruding interior side rails, stanchions and cross bar members for securement of certain types of lading."

On the other hand, Class XAP, XAR and XMR cars are specifically described as "Automobile Parts" and "Automobile Device" cars in the same publication.

Railroads differ in their designation of XML cars in the summary of their equipment, as reported in the Official Register. Thus, the Pennsylvania Railroad reports all XML cars as "Automobile Cars", although, in fact, many such cars are assigned to other than auto traffic or are unassigned and used for general traffic. The Erie, B&O and New York Central, on the other hand, designated class XML cars as general purpose box cars.

In view of the more diversified utility of the XML class car as contrasted, for example, with the XAP box car, it is clear that when class XML cars are used for auto parts it is not because such cars are not

[11]

suitable for other loading. My Exhibit No. 3 is a "SUMMARY OF EXAMPLES OF THE USE OF SPECIAL DEVICE CARS, ASSIGNED AND UNASSIGNED, USED FOR MISCELLANEOUS COMMODITIES." This exhibit illustrates the use of special device cars, generally, not especially designed for nor here assigned to vehicle parts.

Included are both those assigned to particular shippers and cars of like class which are not so assigned, used for the transportation of commodities other than those to which assigned or for commodities generally. At page 29, Mr. Cole has likewise assumed that cars in assigned service, irrespective of class, incur a 100 percent empty return movement. This exhibit shows, however, using the first five items as examples, shipments of tires, merchandise, plate chemicals and bakery goods in special device cars actually assigned to refrigerators and heaters. By way of further illustration, the ninth car on Exhibit 3, PRR car 606639, a class XML box car, is assigned for movement of steel products out of Glen Cliff, Tenn. on the Louisville and Nashville Railroad. This car is shown as returning loaded with tile to Chattanooga, Tenn.

My Exhibit No. 4 is a "SUMMARY OF EXAMPLES OF SPECIAL DEVICE CARS (XAP, XAR and XMR) INTENDED FOR TRANSPORTATION OF VEHICLE PARTS USED FOR THE MOVEMENT OF MISCELLANEOUS COMMODITIES." The special de-

[12]

vice cars embraced by this exhibit were constructed purposely for vehicle parts [transportation and may be considered to be true auto parts] cars. Yet, even cars of these three classes, XAP, XAR and XMR, can be and are in fact used regularly for the transportation of commodities other than auto parts. Such commodities as wallboard, merchandise, flour, lumber and roofing material are loaded into the auto parts cars and provide a revenue movement in lieu of the empty return of 100 percent which Mr. Cole assumes for all such special device cars.

The car in line No. 5, PRR 81523, a class XMR box car, was traced and provides an impressive example of the impossibility of computing an empty return ratio for such special device cars which would be meaningful in terms of commodities or categories of traffic. As shown in Exhibit 4,

this car was loaded with auto parts at South Bend, Ind. on December 4, 1959, destined to San Francisco, Calif. As of March 27, 1960 the car had not yet been returned to South Bend. During the intervening period, this class XMR car handled such diverse commodities as steel from Lebanon, Pa. to Strasburg, Va.; on the Southern Railway, merchandise loaded by the Southern to Cincinnati, Ohio; and, later, undetermined commodities which caused the car to be found on the New Haven Railroad in March, 1960. Under the study suggested by Southern lines, these loaded movements and the intervening empty

[13]

mileage would have been charged against special device cars because of the classification of this particular car. Actually, however, after the initial auto parts movement to San Francisco, the car was in general service. Any effort to allocate the empty mileage incurred by this car as between auto parts traffic and general traffic could only be accomplished on an arbitrary basis and would afford no true measure of the empty return experience of either category of traffic.

Exhibit No. 5 is entitled "SUMMARY OF EXAMPLES OF CARS LOADED WITH AUTO PARTS TO ASSEMBLY PLANTS RETURNED UNDER REVENUE LOADS FROM THOSE ASSEMBLY PLANTS." Here are shown cars loaded with auto parts to automobile assembly plants at various locations (no attempt was made to complete an all-inclusive check) that were reloaded at the same plants with revenue traffic for the original shipping points or points in the same general area. In other words, there was a 100 percent loaded movement in each direction of auto parts, exactly the contrary of Mr. Cole's assumption. This exhibit demonstrates, also, that there is frequently a round-trip movement of auto parts between the automobile production and assembly points.

My final Exhibit, No. 6, illustrates the fact that some cars classified as general purpose cars have utilization which is

substantially better than that of the average general purpose box car and which exerts a

[14]

depressive effect upon the average empty return ratio. The Pennsylvania Railroad leases 150 GAEX cars and 10 GARX cars classified as XME and RBL box cars, respectively. These cars are carefully controlled with a view to reducing empty mileage and increasing the utilization of the car. Examples of the controlled handling of such leased cars are shown in this exhibit. As a consequence of the close supervision of these cars, the ratio of empty to loaded car miles made by such cars during 1959 was only 16.1 percent, which is less than the average experience of box cars generally. It follows, therefore, that whatever the effect of other special device cars upon the average empty return ratio, the 160 leased XME cars, illustrated by Exhibit 6, clearly tend to reduce that ratio so far as the Pennsylvania Railroad is concerned. In this instance, there is no difficulty in relating the empty haul to the loaded movement because all such cars are placed at the specific request of shippers and the empty and loaded movements are carefully supervised by operating personnel.

It is my conclusion that any adjustment in the box car empty return ratio for Official Territory which is premised upon the assumptions, first, that vehicle parts traffic, commodity Class 623, moves in special device box cars rather than in general purpose box cars; and secondly, that all special device cars and all assigned box cars incur a 100 percent

[15]

empty return movement, is clearly unrealistic. It is, of course, true that many shipments of auto parts are transported in special device box cars and that many special device cars and other assigned cars incur substantial empty mileage. It is likewise true, however, that many auto parts

shipments are made in general purpose box cars and that special device and other assigned box cars are loaded with a wide variety of miscellaneous commodities. I have not undertaken to assess the degree to which these factors influence the box car empty return ratio within Official Territory. I do not believe that such an evaluation can be made upon any meaningful or accurate basis because of the indiscriminate use of general purpose and special device box cars.

VERIFIED STATEMENT NO. 75
OF FRED CARPI

[1]

My name is Fred Carpi. I am Vice President, Sales of The Pennsylvania Railroad Company, with headquarters in Philadelphia. I have had over forty years' experience in the Traffic and Operating Departments of the Pennsylvania.

Witness Luckett, in Exhibit 5 to Verified Statement No. 36, indicates that the revenue received by the Northern railroads north of the interterritorial gateways from the Official-Southern traffic here involved represents but 6.0 percent of their total revenue, whereas the revenue received on this same traffic by the Southern railroads south of the interterritorial gateways represents 21.4 percent of their total revenue, and thus infers that because of this fact the Southern lines' divisions should be given extra consideration.

Witness S. R. Goodman, at page 31 of Verified Statement No. 23, similarly states that the Southern railroads are more heavily dependent upon Official-Southern traffic than are the Northern railroads in that they obtain from it a substantially higher percentage of their total freight revenues than do the Northern lines.

These statements appear to suggest that the Commission should prescribe divisions more favorable to the Southern lines and less favorable to the Northern lines than otherwise would be deemed appropriate simply because of the difference in the relative volume of the Official-Southern traffic to the total traffic of the North and South, respectively.

[2]

This same position was taken by Transcontinental lines' witnesses in the Transcontinental Divisions Case, Docket No. 31503, who urged that because the Official-Transcontinental traffic there involved was a higher percentage of the Transcontinental lines' total traffic than of the Eastern

lines' total traffic, the divisions to be prescribed in that case should be weighted in favor of the Transcontinental lines.

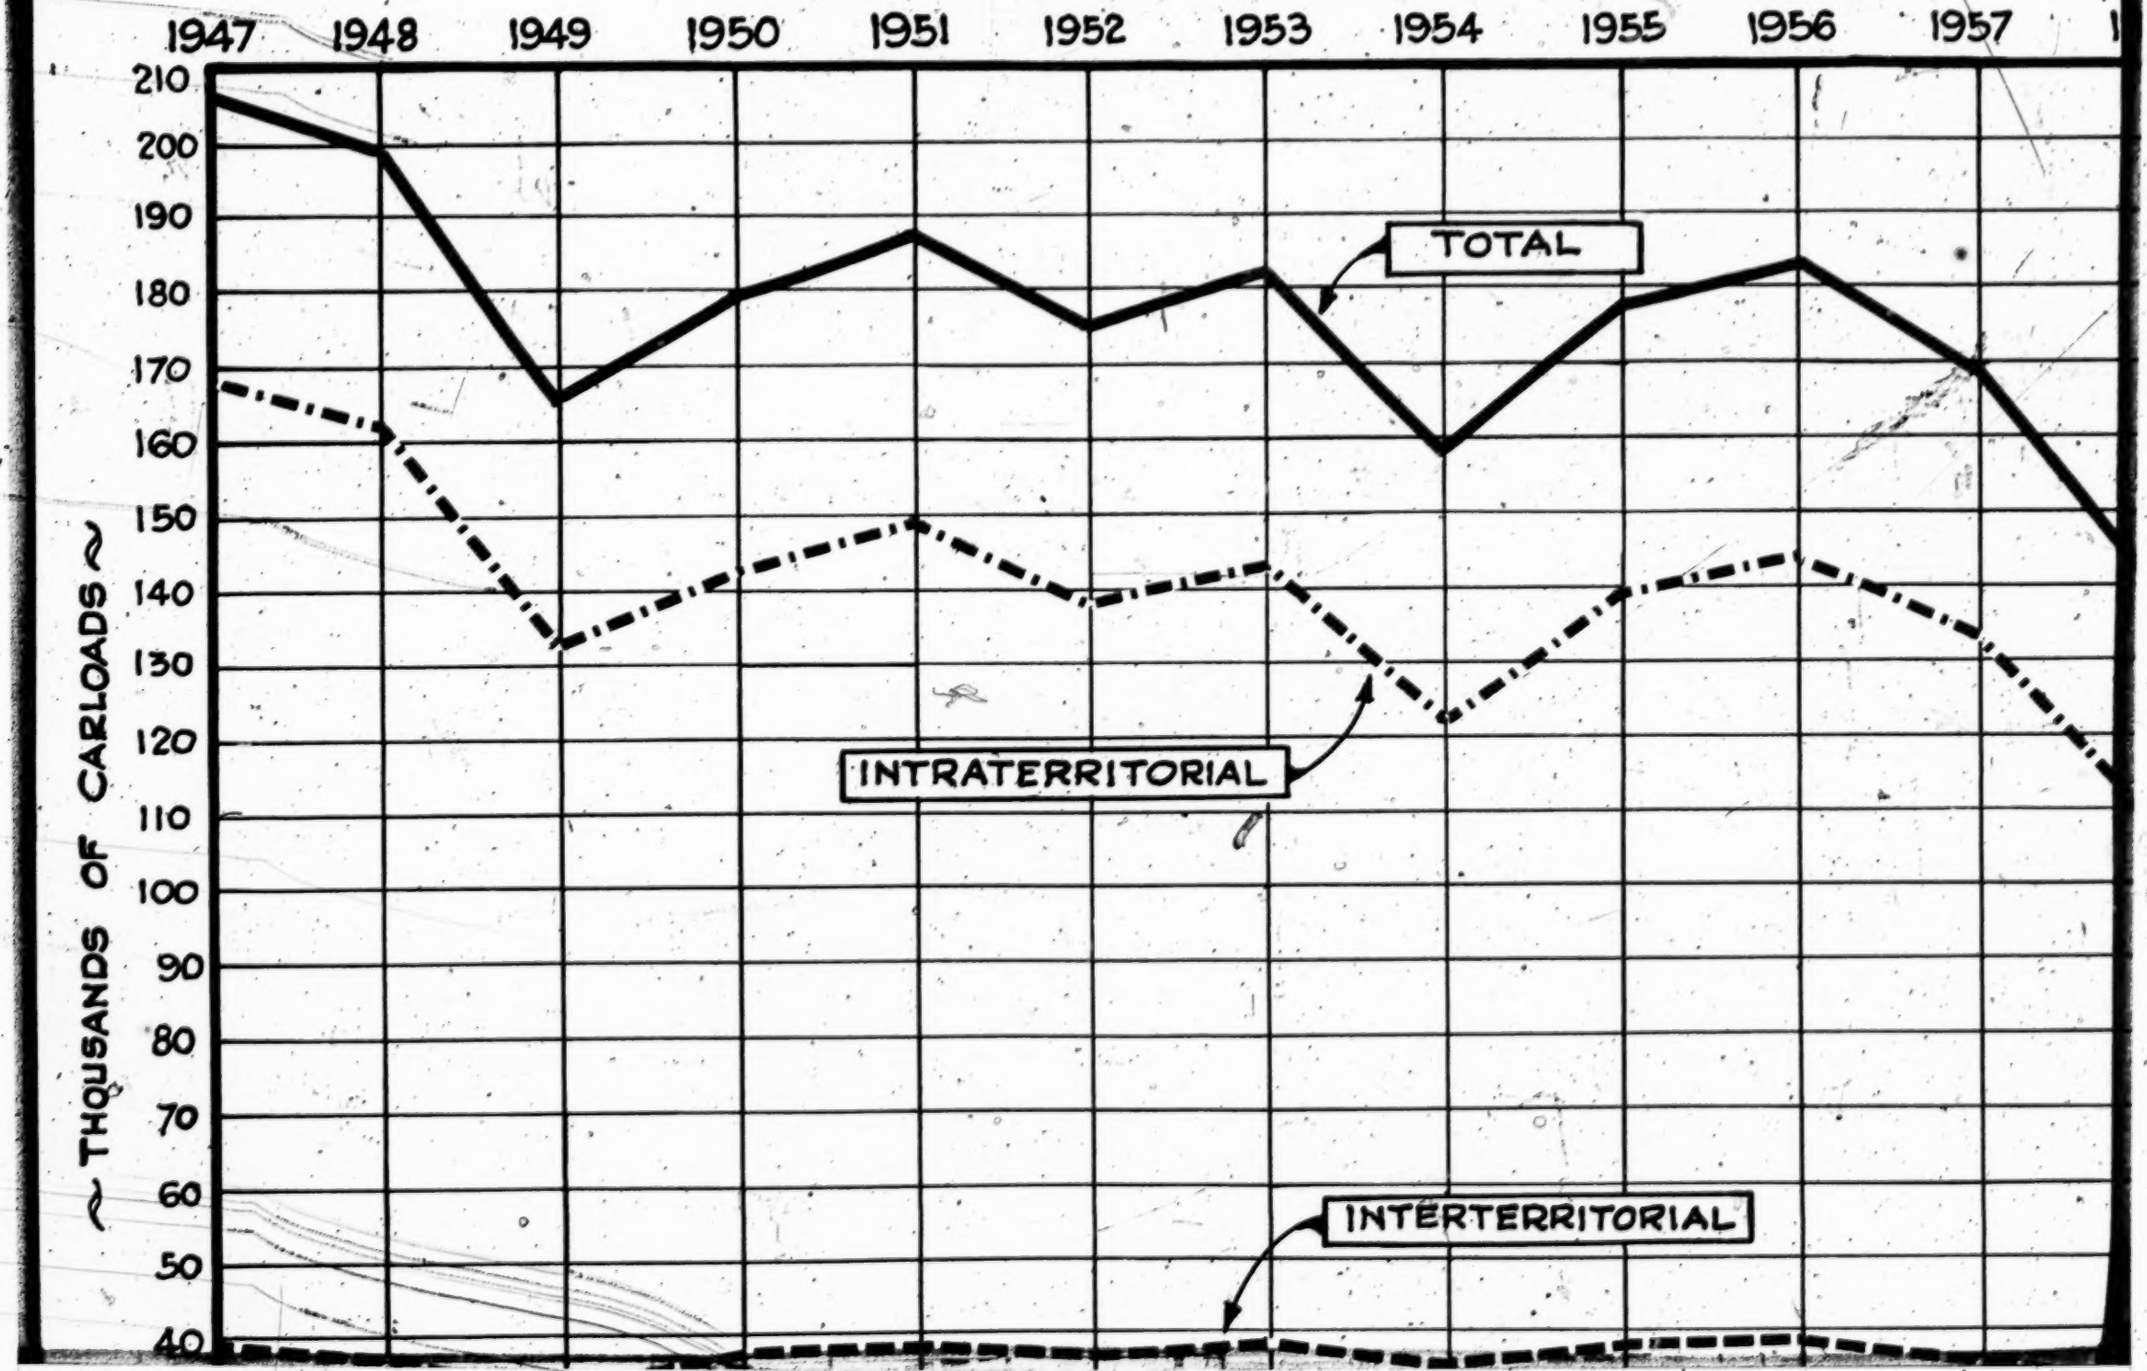
Official territory is a populous and industrialized area and a considerable portion of its traffic moves intraterritorially. Nevertheless, the interterritorial traffic of Eastern lines has become an increasingly important portion of its total traffic and, as shown in Appendix A attached, amounted to approximately 23 percent of its total traffic in 1959 as compared to 19 percent of its total traffic in 1947. As also shown in Appendix A the volume of Official territory interterritorial traffic has held up much better, measured in absolute terms, than has Official territory intraterritorial traffic. Proportionally, interterritorial traffic has actually increased its share of the total over the years.

The importance of interterritorial traffic to the Eastern lines is not measured solely by its percentage of their total carloads, for the reason that the rate level on such traffic, by reason of its generally higher-rated character, is considerably higher than the rate level on the traffic moving within Official territory. This is shown by Appendix B attached from which the following tabulation is taken.

[3]

Average Rate Level Expressed as a Percentage of Docket 28300, Appendix 18 First Class Rates

Territorial Movement	Percent		
	1957	1958	1959
Official to Official	13.1	13.7	13.7
Official to South	27.5	25.8	26.3
South to Official	17.6	17.7	17.7
Between Official and South	20.4	20.0	20.4
Official to Western Trunk Line	30.9	30.9	32.9
Western Trunk Line to Official	28.3	25.8	28.5
Between Official and Western Trunk Line	28.9	27.5	29.7
Official to Southwest	41.0	43.0	41.7
Southwest to Official	26.0	26.2	25.0
Between Official and Southwest	31.5	31.3	29.9
Official to Mountain-Pacific	44.1	45.3	42.9
Mountain-Pacific to Official	24.8	25.5	25.3
Between Official and Mountain-Pacific	30.1	30.4	30.2



The proposal of Southern lines' witnesses that the greater relative volume of the Official-Southern traffic to the total traffic of the South than to that of Official territory should be regarded by the Commission as a reason for according Southern lines a greater proportion of the interterritorial revenues than would otherwise be proper, is both unsound and impractical. Because Official Territory is populous and industrialized, with a large intraterritorial traffic, and is an important market for the products of other territories, the logical extension of the theory of these Southern witnesses would operate to the disadvantage of Eastern lines on all their several interterritorial traffic with other territorial groups, although as a whole the Official interterritorial traffic is an important part of Official Territory lines' total traffic. The result would be to excuse the better paying interterritorial traffic of Eastern lines from contributing its fair share toward meeting their revenue needs.

[4]

The great need of Eastern lines for increased revenues, and the exceedingly great difficulty of obtaining them from their intraterritorial traffic, have been explained by other Eastern lines' witnesses. It is, therefore, essential that Eastern lines should not be deprived of such fair share of the interterritorial revenues as would otherwise be appropriate, on the ground of the relative proportions of this traffic to the total traffic in the North and South, respectively.

VERIFIED STATEMENT NO. 76
OF F. F. COATES

[1]

My name is Frank F. Coates and I hold the position of Assistant Chief Statistician with The Pennsylvania Railroad Company, Philadelphia, Pa. I have had over nineteen years' experience in the Accounting and Financial Departments of this Company. Since 1948 I have been actively engaged in the analysis and preparation of cost studies presented before Federal and State regulatory bodies and have previously testified before this Commission.

Witness Cole in V.S. 39 discusses car costs and contends that United States average car costs should be used in computing costs in both the North and the South rather than such costs for the territorial groups. By employing this method he reduces the costs of the North by $5,592,936 and reduces the South's cost by $215,266. It reduces the North's proportion of the total cost by 0.76%. These figures have been taken from Southern Lines' studies submitted by Witness J. J. Remington in V.S. 40 and 40-A, Exhibit B, page 3 and Exhibit G, pages 5 and 9.

At page 40 and several other places throughout his discussion of car costs Mr. Cole says with respect to car costs for refrigerator and tank cars that the basis of costing is a nationally applicable mileage rate for the particular type of car. The inference is that, because the mileage rental rate for each type of car is the same, the identical cost is used whether traffic is being priced out on an individual road or territory. This is not a fact because, in the case of refrigerator cars, the net debits and credits on account of refrigeration and heater service, car inspection, and general overhead costs are added to this national mileage rate. These costs are not equal as among the several territories over which refrigerator car traffic moves. Such costs per car mile for refrigerator cars as taken from the Commission's

Cost Section application of Rail Form A for 1956, are as follows:

Eastern District	5.58271¢
Pocahontas Region	5.89055
Southern Region	5.85400

[2]

I might point out here that Witness Remington, by using a national car cost, wipes out the differences in general overhead cost ratios among the several territories, which is an item included in the car costs for per diem cars. Costs are incurred by a railroad operating other than mileage cars because of per diem costs whether the car is moving or not. However, with respect to mileage cars the rental costs are borne by the carrier operating the car only for the mileage which that car may make on its lines.

[3]

At page 41 Witness Cole shows comparisons for a box car with a 28.9 ton load moving 350 miles with one terminal using only the car costs developed from Rail Form A by territories. These are shown to be $17.91 Eastern District, $16.20 Eastern District plus Pocahontas Region, and $12.22 Southern Region. These costs assume an empty return ratio that is equal in each territory which of course does not recognize the operating conditions in that respect which are different in each territory.

In its burden statements the Commission's Cost Section in pricing out South to South movements uses Southern territorial car costs and in pricing Official to Official movements uses Official territory costs. In the case of Official-Southern interterritorial traffic the Cost Section uses the car costs for both territories. That is, it prices one terminal at Southern costs, the other at Official costs and the line-haul is priced 50 percent at the Southern level and 50 percent at the Official level. It should be noted that the Cost Section does not use United States costs for either local or interterritorial movements.

Witness Cole cites an example of a box car owned by the Union Pacific Railroad moving from Morristown, Tenn., to Willard, Ohio, over the lines of the Baltimore & Ohio and Southern Railway for a total of 707 miles, 351 North and 356 South. Concerning this movement Witness Cole states as follows:

[4]

> "Quite obviously the tare weight of the . . . box car . . . does not change upon its crossing of the territorial boundary and just as obviously the car cost on such a car does not change upon the crossing of the territorial boundary." (page 57)
>
> ". . . both the Southern Railway and the Baltimore and Ohio pay the same national per diem rate and neither incur depreciation or repair expense on the car." (page 42)

If the Baltimore and Ohio makes repairs to Union Pacific freight cars and charges the labor and material to Account 314—Freight Train Car Repairs, it incurs repair expense on freight cars. As an indication as to what the situation is, during the month of May 1960 the B. & O. billed the Union Pacific in the amount of $2,781.06 for repairs made by the B. & O. on Union Pacific freight cars. These bills were made in accordance with the AAR Code of Rules Governing the Condition of and Repairs to Freight Cars. The amount billed was at standard labor and material charges for specific repairs and may or may not reimburse the B. & O. for the actual expense for labor, material, rip track switching, etc. In addition, if the B. & O. made repairs that were on account of damage occurring through unfair usage or improper protection by the B. & O., the B. & O. would receive no reimbursement therefor. Of course the Southern Railway repairs Union Pacific cars also.

Also, both the B. & O. and the Southern Railway incur car inspection costs which are included in Account 314—Freight Train Car Repairs

[5]

and are applicable to Home and Foreign Per Diem cars and cars rented on a mileage basis.

Witness Cole considers the example cited to be "realistic" for the reason that "our traffic study showed that 27.43 percent of the box cars handling North-South traffic are owned by carriers other than Official or Southern Carriers". This would mean that the balance or 72.57 percent of the box car traffic, which would be more realistic, moves in cars owned by Official or Southern Carriers, and a great many of these moves would be in cars owned by one of the carriers involved in the particular movement. Take, for example, a box car owned by the Southern and moving from Morristown to Willard via the Southern and B. & O., between the same points and handled by the same roads as the example cited by Witness Cole, the only difference being in the ownership of the car. Witness Cole's contention that because the tare weight does not change at the territorial boundary the car cost does not change at the territorial boundary is obviously incorrect.

Of course the South must foot the bill when transportation service is being rendered in the South, and the North stands the expense when the transportation service is north of the gateway. But when the movement is in the Southern Railway box car the costs incurred by the Southern Railway are interwoven with ownership costs, users costs, and per

[6]

diem credits, while the expense incurred by the B. & O. is reflected in per diem charges and users' costs. When the shipment moves in a car of B. & O. ownership the situation is reversed. Other situations would include using a car of Pennsylvania Railroad ownership, that is, a car of northern ownership but the owner road not involved in the specific movement. Another example would be the use of an Atlantic Coast Line car, a car of southern ownership, but by a road not involved in the particular movement.

Every movement of the studied traffic involves at least two carriers and at least one of them uses a foreign car. The variety of situations is almost unlimited, with varying numbers of roads involved.

It is obvious that any car moving North-South traffic involves the whole range of car costs, not only those listed by Witness Cole when he defined the terms in his opening paragraph but also the per diem costs he included on page 41 when he cites car costs in figures.

Mr. Cole has suggested three reasons why the system average car costs vary so greatly as between territories, the first of which he summarizes as follows:

> "(1) The system average car cost reflects the composite cost of the car fleet owned by each group of roads. This is a different car fleet in each territory, and is very different from the consist of the cars handling Official-Southern traffic."

[7]

The foregoing is incomplete and inaccurate. The fact is that territorial average Form A costs reflect the composite cost of both the car fleet owned and the car fleet used plus the net effect of per diem debits and credits. The fact that there is a different car fleet in each territory and that it is not the same as the consist of the cars handling North-South traffic is no justification for the use of national car costs.

Mr. Cole has suggested that the Rail Form A produces results which are inappropriate for use in this proceeding since such costs are greatly influenced by the types of cars owned by each group of roads. At page 44 he lists the percentage distribution of Official-Southern traffic moving in per diem cars by type of car and makes the comment that over 80 percent of such cars are box cars and less than 1 percent of the traffic moves in hopper cars. Then at page 45 he shows ownership and car miles, the latter based on the 7-day study, for Official territory and the Southern terri-

tory and points out that compared with the Official-Southern traffic the types of cars, particularly with respect to open top cars, are quite different for both territories. I have reproduced in Appendix A car ownership, car miles, and car miles per serviceable car per day for the United States, Eastern District, Pocahontas Region, Official territory, Southern Region, and Western Dis-

[8]

trict. I conclude from Mr. Cole's statements that, because the percentages of cars originated or terminated and car miles with respect to box cars handling Official-Southern traffic are substantially in excess of box-car percentages of cars owned and total car miles for Official territory and Southern Region, his solution would be to use the national car costs for the national ownership and car miles. From my Appendix "A" it is readily apparent that even the totals for the United States do not approach the box car proportions involved in handling the traffic at issue in this proceeding. It might be noted that the highest percentages for box cars were shown for the Western District and even those are not sufficiently close to the 80 percent figure referred to by Mr. Cole to justify using the average United States car cost.

Next Mr. Cole suggests that the significant difference as between types of cars is in the degree of utilization. This is based on a constructed figure called car miles per year by type of car, the construction of which is shown in Witness Remington's Verified Statement No. 40, Exhibit C, page 15. There are some inaccuracies in developing these averages. One of these is the use of cars owned by Class I railroads in the United States and does not consider that a number of these cars are unserviceable and therefore could not make any car miles for at least whatever the period was that they were awaiting repairs.

[9]

While Mr. Cole has developed these averages for United States cars and car miles, he ignores the fact that utiliza-

tion with respect to car miles per car by type may be much different in each of the territories for a number of reasons such as commodities handled, speed of trains, terminal delays, shopped cars, etc. He then mentions that the separation of car costs between mileage and time would be different if different degrees of utilization by type of car is recognized, again ignoring possible territorial differences. These computations were made by Witness Remington and I will defer that subject until later.
